**GUIDE TO THE SYSTEM OF PUBLIC SUPPORT
FOR RESEARCH, DEVELOPMENT AND INNOVATION
IN THE CZECH REPUBLIC – 2020**

Authors:

RNDr. Marek Blažka

Ing. Libor Kraus

Publications issued to date:

1. Guide to the System of State Aid for Research and Development in the Czech Republic – 1999
ISBN 80-86122-42-5
2. Guide to the System of State Aid for Research and Development in the Czech Republic – 2000
ISBN 80-86122-55-7
3. Guide to the System of State Aid for Research and Development in the Czech Republic – 2001
ISBN 80-86122-73-5
4. Guide to the System of State Aid for Research and Development in the Czech Republic – 2002
ISBN 80-86122-99-9
5. Guide to the System of Public Support for Research and Development in the Czech Republic – 2003
ISBN 80-7329-030-8
6. Guide to the System of Public Support for Research and Development in the Czech Republic – 2004
ISBN 80-7329-053-7
7. Guide to the System of Public Support for Research and Development in the Czech Republic – 2005
ISBN 80-7329-081-2
8. Guide to the System of Public Support for Research and Development in the Czech Republic – 2006
ISBN 80-7329-112-6
9. Guide to the System of Public Support for Research and Development in the Czech Republic – 2007
ISBN 80-7329-142-8
10. Guide to the System of Public Support for Research and Development in the Czech Republic – 2008
ISBN 978-80-7329-171-6
11. Guide to the System of Public Support for Research and Development in the Czech Republic – 2009
ISBN 978-80-7329-206-5
12. Guide to the System of Public Support for Research and Development in the Czech Republic – 2010
ISBN 978-80-87294-16-1
13. Guide to the System of Public Support for Research and Development in the Czech Republic – 2011
ISBN 978-80-87294-27-7
14. Guide to the System of Public Support for Research and Development in the Czech Republic – 2012
ISBN 978-80-87294-30-7
15. Guide to the System of Public Support for Research and Development in the Czech Republic – 2013
ISBN 978-80-87294-40-6
16. Guide to the System of Public Support for Research and Development in the Czech Republic – 2014
ISBN 978-80-87294-48-2
17. Guide to the System of Public Support for Research and Development in the Czech Republic – 2015
ISBN 978-80-87294-57-4
18. Guide to the System of Public Support for Research and Development in the Czech Republic – 2016
ISBN 978-80-260-9613-9

19. Guide to the System of Public Support for Research and Development in the Czech Republic – 2017

ISBN 978-80-906810-0-2

20. Guide to the System of Public Support for Research and Development in the Czech Republic – 2018

ISBN 978-80-906810-2-6

21. Guide to the System of Public Support for Research and Development in the Czech Republic – 2019

ISBN 978-80-906810-4-0

FOREWORD

ČSNMT

The Czech Society for New Materials and Technologies (ČSNMT) was founded in 1993. Its mission is to advance the research, development and innovation in the field of new materials and processes, support industrial application of research and development and help the growth of its members, their creative potential and professional skills. ČSNMT also promotes sharing of the outcomes of research and development and international cooperation in the field of materials and their processing. ČSNMT is convinced that research, development and innovation belong to fundamental prerequisites for maintaining the competitiveness and fostering the development of the society and the Czech economy.

The initiator of this Guide was Ing. Tasilo Prnka, DrSc., an excellent scientist, specialist and populariser of nanotechnology research in the Czech Republic, one of the founders and the first president of the ČSNMT. The Managing Committee of ČSNMT has decided to launch this publication series, which will continue to remind us of his legacy.

COMTES FHT

The company COMTES FHT a.s. was established in December 2000 as a start-up focusing on research and development of metallic materials and their processing technologies. Since 2003, it has been operating as a research organisation according to the rules of the Community Framework. The mission of the research organisation COMTES FHT is to strengthen the competitiveness of Czech and European manufacturing companies by providing highly-specialised services for the development, innovation and implementation of state-of-the-art processes and products in practice. The company focuses on metallic materials and, recently, on polymer composites and plastics as well. It is based in the town of Dobruška in the west of the Czech Republic and collaborates with many partners and serves numerous clients from around the globe.

COMTES FHT has successfully completed a number of research projects. Undoubtedly, one of the largest and most important ones was the “West-Bohemian Centre of Materials and Metallurgy” project under the RDIOP programme. As part of this project, a two-storey building has been erected on the company’s grounds, housing laboratories for metallographic analysis, computer modelling and design. In addition, a unique metallurgical laboratory has been set up. Another major and successful project was funded from the EICOP programme and involved the construction of a science and technology park and a business incubator adjacent to the company’s premises, enabling the company to procure new instruments and equipment and explore new themes in applied research, such as additive manufacturing.

Regardless of this difficult period of time, the research organisation COMTES FHT continues to be a reliable partner to research organisations and industrial companies all over the world.

HISTORY OF THE GUIDE

In 1999, the Czech Society for New Materials and Technologies published the first Guide to the System of State Aid for Research and Development in the Czech Republic – 1999. This was the first time when detailed information on the programmes of state aid for research and development in the Czech Republic and on the support of international cooperation in research and development was compiled in a single booklet. After this first edition had been very well received, its later versions have continued to be published for twenty-two years, eventually under the title “Guide to the System of Public Support for Research and Development in the Czech Republic”. The Guide is updated every year to provide the most recent information and to reflect the current situation in research and development.

As the Czech Society for New Materials and Technologies and COMTES FHT firmly believe that research, development and innovation are the cornerstones of the modern society and prosperous economy, they have decided to jointly publish this Guide. Both organisations believe that it will become a useful aid for not only the applicants for research and development funding but also for others interested in this field.

Table of content

FOREWORD	4
INTRODUCTION	11
1. THE SYSTEM OF RESEARCH, DEVELOPMENT AND INNOVATION IN 2020	13
1.1 National Research, Development and Innovation Policy of the Czech Republic	14
1.1.1 National Research, Development and Innovation Policy of the CR for 2009–2015	15
1.1.2 Update to the National Research, Development and Innovation Policy of the Czech Republic for 2009–2015 and Projections until 2020	15
1.1.3 The National Research, Development and Innovation Policy of the Czech Republic for 2016–2020 (NRDIP 2016)	16
1.1.4 Update to the National Research, Development and Innovation Policy of the Czech Republic for 2016–2020 (Update to NRDIP 2016)	17
1.1.5 The National Research, Development and Innovation Policy of the Czech Republic 2021+ (NRDIP 2021+)	17
1.2 Priorities of oriented research, development and innovation	18
1.2.1 Long-Term Principal Research Directions	18
1.2.2 Priorities of Applied Research, Development and Innovation of the Czech Republic for 2009–2011	18
1.2.3 National Priorities of Oriented Research, Experimental Development and Innovation	18
1.3 Innovation Strategy of the Czech Republic 2019 - 2030	19
1.3.1. Background and structure of the strategy	19
1.4 Legislation and legal regulations	22
1.5 Budget for research, development and innovation	25
1.5.1 Draft budget preparation	25
1.5.2 Structure of the RDI budget	27
1.5.3 Identification of research organisations	29
1.6 Evaluation of results produced by research organisations	30
1.6.1. M17+ Methodology of Evaluation of Research Organisations and Programmes of Specific-Purpose Funding for Research, Development and Innovation	31
1.7 The Research, Development and Innovation Information System	33
1.8 Analyses of the Situation in Research, Development and Innovation in the Czech Republic	35
2. PUBLIC FUNDING OF RESEARCH AND DEVELOPMENT	38
2.1 Total and public spending on R&D in selected developed countries	39
2.2 Total expenditure from the state budget of the Czech Republic on research, development and innovation	40
2.3 Institutional and specific-purpose funding from the state budget for research, development and innovation	41
2.4 Expenditure on research, development and innovation by selected public funding providers	42
2.5 Institutional funding of research and development by selected public funding providers	43
2.6 Specific-purpose funding of research, development and innovation by selected public funding providers	44
3 RDI PUBLIC FUNDING PROVIDERS AND PROGRAMMES IN THE CZECH REPUBLIC	46

3.1 Czech Science Foundation (CSF)	46
3.1.1 Standard grant projects (GA)	47
3.1.2 International (bilateral) projects (GC)	48
3.1.3 Junior grants (GJ)	48
3.1.4 JUNIOR STAR (GM)	48
3.1.5 LA grants (GF)	49
3.1.6 Projects which support international collaboration for obtaining ERC grants (GH)	49
3.1.7 EXPRO grants for excellence in basic research (GX)	50
3.1.8 Public tenders	50
3.1.9 Contacts and additional information	50
3.2 Technology Agency of the Czech Republic (TA CR)	51
3.2.1 EPSILON (TH)	51
3.2.2 BETA2 (TI)	52
3.2.3 ZETA (TJ)	52
3.2.4 ZETA (TJ)	54
3.2.5 THETA (TJ)	55
3.2.6 National Centres of Competence 1 (TN)	57
3.2.7 DELTA 2 (TM)	58
3.2.8 GAMA 2 (TP)	60
3.2.9 Environment for Life – Sectoral programme of the Ministry of the Environment (SS)	61
3.2.10 TRANSPORT 2020+- sectoral programme of the Ministry of Transport (CK)	62
3.2.11 TREND-- sectoral programme of the Ministry of Transport (FW)	63
3.2.12 Public tenders	66
3.2.13 Contacts and additional information	66
3.3 The Ministry of Culture (MC)	66
3.3.1 The NAKI II Programme for Applied Research and Development of National and Cultural Identity 2016–2022 (DG)	66
3.3.2 Contacts and additional information	67
3.4 Ministry of Defence (MD)	68
3.4.1 Development of Armed Forces of the Czech Republic (OW)	68
3.4.2 Ambition (OZ)	69
3.4.2 Public tenders	69
3.4.3 Contacts and additional information	70
3.5 Ministry of Industry and Trade of the Czech Republic (MIT)	70
3.5.1TRIO (FV)	70
3.5.2 The Country for the Future (FX)	71
3.5.2 Public tenders	72
3.5.3 Contacts and additional information	73
3.6 Ministry of Education, Youth and Sports (MEYS)	74
3.6.1 National Sustainability Programme I 2013 - 2020 (LO)	74

3.6.2 National Sustainability Programme II 2013 - 2020 (LQ).....	74
3.6.3 Public tenders.....	74
3.6.4 Contacts and additional information.....	74
3.7 Ministry of the Interior (MI).....	75
3.7.2 Programme for Security Research for National Needs 2016 - 2021 (VH)	76
3.7.3 Strategic support for the advancement of security research in the Czech Republic 2019 - 2025 IMPACT 1 (VJ)	76
3.7.4 Public tenders.....	77
3.7.5 Contacts and additional information.....	78
3.8 Ministry of Health (MH).....	78
3.8.1 Programme to Support Applied Medical Research and Development 2015–2022 (NV)	78
3.8.2 Programme to Support Applied Medical Research and Development 2020-2026 (NU).....	79
3.8.3 Public tenders.....	80
3.4.8 Contacts and additional information.....	80
3.9 Ministry of Agriculture (MA)	81
3.9.1 Programme for applied research of the Ministry of Agriculture for 2017–2025, EARTH (QK).....	81
3.9.2 Public tenders.....	82
3.9.3 Contacts and additional information.....	82
3.10 Overview of calls under current support programmes.....	83
4. OPERATIONAL PROGRAMMES FOR SUPPORT OF RESEARCH AND DEVELOPMENT IN THE CZECH REPUBLIC	84
4.1 Enterprise and Innovation for Competitiveness Operational Programme 2014–2020	84
4.1.1 General information.....	84
4.1.2 The use of programme funds	86
4.1.3 Schedule of programme calls.....	88
4.1.4 Contacts and additional information.....	89
4.2 The Research, Development and Education Operational Programme (RDEOP)	90
4.2.1 General information.....	90
4.2.2 The use of programme funds.....	91
4.2.3 Schedule of programme calls	94
4.2.4 Contacts and additional information.....	94
4.3 Technology and Applications for Competitiveness Operational Programme 2021-2027 (TACOP)	94
4.2.1 General information and structure.....	94
4.3.2 Allocated funds.....	95
4.4 Jan Amos Komenský Operational Programme 2021-2027 (JAKOP)	96
4.4.1 General information and structure.....	96
4.4.2 Allocated funds.....	97
5. INTERNATIONAL COOPERATION OF CZECH REPUBLIC IN RESEARCH AND DEVELOPMENT IN THE CONTEXT OF EU TOOLS	99

5.1 Horizon 2020	99
5.1.1 Horizon 2020-related initiatives	100
5.2.2 Programmes under Art. 185 initiatives	101
5.2 Horizon Europe 2021-2027	102
5.2.1 Structure of Horizon Europe	103
5.3 European Research Area (ERA)	105
5.3.1 ERA-NET PLUS	106
5.3.2 QUANTERA	106
5.3.3 E-RARE	107
5.3.4 EuroHPC	107
5.4 EURATOM	107
5.4 Joint Research Centre (JRC)	108
5.8 European Institute of Innovation and Technology (EIT)	108
5.7 Related international initiatives	109
5.7.1 P2Ps and Cofund	109
5.7.2 Contractual Public-Private Partnerships (PPP)	109
5.7.4 European Technology Platforms	110
5.7.5 European Innovation Partnerships	110
5.7.6 Joint Programming	111
5.7.7 EAFIP - European Assistance For Innovation Procurement	112
5.8 European Research Council - ERC	112
5.9 European Programme for the Competitiveness of Enterprises and SMEs (COSME)	113
5.10 The Research Fund for Coal and Steel – RFCS	113
5.11 Copernicus	114
6. INTERNATIONAL COOPERATION	116
6.1 INTER-EXCELLENCE Programme	116
6.1.1 INTER-(A)CTION sub-programme	118
6.1.2 INTER-(C)OST sub-programme	119
6.1.3 INTER-(T)RANSFER sub-programme	121
6.1.4 The INTER-(I)NFORM sub-programme	123
6.1.5 The INTER-(V)ECTOR sub-programme	124
6.1.6 The INTER-(E)UREKA sub-programme	126
6.2 Large infrastructures for research, development and innovation	127
6.2.1 General information	127
6.2.2 Financing	128
6.2.3 International structure	129
6.2.4 Road map	131
6.3 Development and international cooperation institutions	131
6.3.1 CZERA 3	131
6.3.2 Czech Liaison Office in Brussels – CZELO	132

6.3.3 Enterprise Europe Network (EEN)	132
6.3.4 EURAXESS	132
6.4 International activities of Czech Science Foundation	133
6.4.1 Science Europe (SE)	133
6.4.2 Global Research Council	133
6.4.3 CEUS	134
6.5 International activities of the Technology Agency of the Czech Republic	134
6.5.1 DELTA 2 programme	134
6.5.2 Kappa programme	134
6.5.3 Cofund calls	135
6.5.4 TAFTIE	135
7 OTHER ACTIVITIES OF INTERNATIONAL COOPERATION	136
7.1. Memorandum of Cooperation	136
7.1.1 Czech-Bavarian R&D cooperation	136
7.1.2 Czech-Chinese RDI cooperation	136
7.1.3 Czech-Israeli RDI cooperation	136
7.1.4 Czech-Japanese RDI cooperation	136
7.4 Czech-Norwegian research programme	137
7.3 Cooperation between the EU and the Russian Federation (ISTC) and Ukraine (STCU) ..	137
7.4 The Fulbright Commission	137
7.5 NATO Science Programmes – Civilian Research	138
7.6 European Space Agency (ESA)	139
7.6.1 Programme for development of scientific experiments (PRODEX)	139
7.7 EMBC, EMBO, EMBL and the ELIXIR project	140
7.8 Organisation for Economic Cooperation and Development (OECD)	141
7.9 European Southern Observatory (ESO)	141
7.10 European Organization for Nuclear Research (CERN) and the Joint Institute for Nuclear Research (JINR) in Dubna	142
7.11 The Danube Region Cooperation	142
7.12 Other institutions in international cooperation	143
7.12.1 Central European Initiative	143
7.12.2 Visegrad Group	143
7.12.3 Salzburg Forum	143
7.12.4 Von Kármán Institute for Fluid Dynamics (VKI)	143
7.12.5 ARTEMIS, ENIAC and ECSEL partnerships	144
7.12.6 Antarctic Cooperation	144
LIST OF ACRONYMS AND ABBREVIATIONS	146

INTRODUCTION

The “Guide to the System of Public Support for Research and Development in the Czech Republic – 2020” is the twenty-second publication in the series that has been published continuously since 1999. This year’s Guide has the same ambition as the very first one: to inform professionals as well as the general public about the options and ways of obtaining funding from support programmes for research and development, and to give a summary of recent developments in this field.

The first edition was published in 1,000 copies. It was the first publication to provide comprehensive information on research and development in the Czech Republic from the perspective of international support as well as state aid. At that time, the ministries and offices which act as budget agencies in the Czech Republic differed greatly in their views of the government funding for research and development. Horizontal coordination of relevant programmes was practically absent, as was any integrated national research and development policy.

Since then, the system of research and development has undergone many changes on its long journey. In 2000, the first National Research and Development Policy was formulated. In 2002, the Support of Research and Development Act No. 130/2002 Sb. entered into effect and became crucial for shaping the future of Czech research and development. In 2007, as the new version of the National Research and Development Policy was being prepared, deficiencies in the public support of R&D were identified of such proportions that they led to what became known as the Reform of the Research, Development and Innovation System. The Reform has transformed the management of research and development and innovation (RDI) at all levels, including the state administration, and changed the course of and upgraded the standards for Czech research and development. In 2009, the amended Act No. 130/2002 Sb. came into effect. In 2012, the government adopted newly-formulated RDI Priorities, a document that identified research and development areas of key importance to the Czech Republic. In 2014, the Partnership Agreement between the Czech Republic and the EU for the 2014–2020 period was ratified. The same year, the European Commission adopted two important legal rules, the new Regulation No. 651/2014 and the new Framework for State Aid for Research, Development and Innovation. In 2016, the National Research, Development and Innovation Policy of the Czech Republic for 2016–2020 was approved. In 2017, the Methodology of Evaluation of Research Organisations and Programmes of Specific-Purpose Funding for Research, Development and Innovation was approved by the government. It is essential to the R&D sector because its rules govern the way institutional funding is allocated to research organisations. In February 2019, the government approved the Innovation Strategy of the Czech Republic 2019 – 2030. As the Guide 2020 was being prepared, the R&D Council debated the new National Research, Development and Innovation Policy of the Czech Republic 2021+. This is just a short list of the key documents which have shaped and will continue to shape research and development in the Czech Republic.

The system of research, development and innovation is changing continuously. Some of the changes are desirable, eliminating the consequences of ineffective interventions made in the past, whereas other changes arise due to external circumstances, such as the transposition of European regulations into Czech legislation. Other changes are due to the political scene, where each change in government automatically leads to the transformation of long-term R&D strategies. As a result, the system of thirty years still lacks the stability needed for planning for several years ahead, although long-term spending projections have been compiled for many years. This lack of certainty has an adverse impact on the management and results of research organisations and other organisations linked to research, development and innovation. This is one of the major obstacles that continue to hinder Czech research and its progress towards the European and global levels.

However, the challenge before us today is much greater than a mere uncertainty. The whole world faces the COVID-19 pandemic. No one can predict future events or quantify the impact the pandemic will have on the budgets of the Czech Republic and other countries. Yet, it is certain that research and development will be affected. The nature of the impact is unknown. This booklet reports on the state of affairs as of March 2020, while some information may become outdated even in the same year.

As with previous editions, the 2020 Guide has been compiled using publicly accessible data and resources, and documents provided by the Research and Development Council and the budget agencies (public funding providers).

Summary and conclusions: Despite all the shortcomings in the RDI system, there are opportunities to secure funding for high-quality research projects and other research activities in the Czech Republic, to sustain and raise the standard of Czech research and development, and thus to close the gap on competitive European economies. The Czech Society for New Materials and Technologies and COMTES FHT are hopeful that this publication will become your guide on this path.

1. THE SYSTEM OF RESEARCH, DEVELOPMENT AND INNOVATION IN 2020

The sphere of research, experimental development and innovation (RDI) has been hit by the COVID-19 pandemic and its effects will continue for the rest of the year. At the time this document was being compiled, it was unknown how long the lock-down would last, along with the other measures imposed by the Czech government. Their impact on government spending on research, development and innovation in this and the coming years was not clear either. The same holds for running and future public tenders, research projects and the implementation of strategies for the long-term development of research organisations, and other efforts. This 2020 Guide is based on documents developed and adopted before the pandemic. The recommendation to the reader to verify information using the references provided (websites of public funding providers and other public bodies) is therefore even more relevant than in previous years.

The RDI system in the Czech Republic may be characterized from a variety of perspectives, such as through the essential documents which provide its basic framework. These documents mainly concern the part of RDI funded by the government or, more precisely, funded from all public sources, such as the state budget, EU, and other public sources, including regional and municipal administrations. Since financing from multiple sources is a common practice, the publicly-funded RDI activities are closely linked to all other RDI efforts, whether those receive funding from domestic private sources or from abroad. A significant portion of non-public funded RDI also benefits from some form of state support, e.g. through tax incentives (deduction of research and development expenditures from the income tax base).

The system of support for RDI is described below in terms of eight aspects:

1. Conceptual and strategic (provided by the National Research, Development and Innovation Policy of CR),
2. Thematic focus (the Priorities of Oriented RDI),
3. Innovation (Innovation Strategy of the Czech Republic 2019 – 2030),
4. Legislative (the Support of Research and Development Act No. 130/2002 Sb., as amended, and the Framework for State Aid for RDI),
5. Financial (state budget for RDI, deduction of RDI spending, and other measures)
6. Assessment (Evaluation of Research Organisations and others),
7. Information (the RDI Information System),
8. Analytical (namely the Analysis of the Situation in Research, Development and Innovation in the Czech Republic and Comparison with the Situation Abroad).

1.1 National Research, Development and Innovation Policy of the Czech Republic

The document entitled The National Research, Development and Innovation Policy of the Czech Republic is approved at the government level. It outlines the main goals of the funding to be provided, the thematic focus, gives estimates of RDI spending from the state budget, the EU funds and private sources, and describes the priorities of applied research, development and innovation, and the measures for their implementation. It is a fundamental document that defines the orientation of the entire system for the next period.

Since 1994, there have been a number of predecessors to the current version of the policy. The following are a few examples from the recent period (after 2004):

- The National Research and Development Policy of the Czech Republic for 2004–2008
- The National Innovation Policy of the Czech Republic for 2005–2010
- Harmonisation of the National Research and Development Policy of the Czech Republic for the period from 2004 to 2008 with the National Innovation Policy of the Czech Republic and other relevant Czech and EU documents
- The National Research, Development and Innovation Policy of the Czech Republic for 2009–2015
- The Update to the National Research, Development and Innovation Policy of the Czech Republic for 2009–2015 and Projection until 2020 (2013 Update to NRDIP)

The latest policy has been the National Research, Development and Innovation Policy of the Czech Republic for 2016–2020 which expires this year. Besides, the new policy envisaged for 2021 and beyond (section 1.1.4) is being finalized.

The drafting process for the new policy in 2007 revealed problems and shortcomings in the existing system of public support for R&D of such gravity that profound changes to the entire system were necessary. In response to them, the Research and Development Council (R&D Council) drafted the Reform of the Research, Development and Innovation System.

The Reform brought these fundamental changes:

1. In order to facilitate coordination and minimize the overlap of responsibilities, the number of public funding providers was considerably reduced (from 22 to 11).
2. The institutional funding, which is intended to foster the development of research organisations, was no longer allocated on the basis of assessment of general large research projects (known as “research plans”) but either on the basis of a comprehensive evaluation of the results produced by research organisations or based on an evaluation carried out by the public funding provider (the Academy of Sciences of the Czech Republic).
3. A significant portion of the responsibility for the specific-purpose funding for R&D was transferred from ministries and government offices to agencies: the Czech Science Foundation (GA CR) and the Technology Agency of the Czech Republic (TA CR); the latter was established by an amendment to Act No. 130/2002 Sb.
4. However, the ministries retained responsibilities for supporting four cross-sectoral and three sectoral areas.
5. Each of the four cross-sectoral areas is supported in its entirety: International Collaboration in R&D (Ministry of Education), Security R&D (Ministry of the Interior), Applied R&D of National and Cultural Identity (Ministry of Culture), Support of Large R&D Infrastructures (Ministry of Education).
6. The specifics of three sectoral areas made it impossible for the TA CR to provide effective support, in contrast to other sectoral R&D fields. These areas were therefore supported through competent ministries: Applied Agricultural R&D (Ministry of Agriculture), Applied Defence R&D (Ministry of Defence), and Applied Healthcare R&D (Ministry of Health).
7. Conditions and rules have been defined for establishing centres of excellence and for creating large infrastructures for R&D.
8. Principles were set out for RDI funding provided from the EU funds until 2013 (or 2015) under the following operational programmes: Research and Development for Innovation

(RDIOP), Entrepreneurship and Innovation (EIOP), Education for Competitiveness (ECOP), Prague – Competitiveness, and Prague – Adaptability.

1.1.1 National Research, Development and Innovation Policy of the CR for 2009–2015

The National Research, Development and Innovation Policy of the CR for 2009–2015 was approved by Government Resolution No. 729 of 8 June 2009. It comprised the actual policy document, as well as the Priorities of Applied Research, Development and Innovation 2009–2011, and five annexes.

The National RDI Policy consisted of six inter-related parts:

1. Background to the NRDIP
2. Main principles of the NRDIP
3. NRDIP objectives and activities
4. Main principles of the NRDIP after 2015 (background, financial aspects, international aspects, and regional aspects)
5. Demands and ramifications (demands on legislation, state budget, and other requirements for the economy, society, and the environment)
6. The Priorities of Applied Research, Development and Innovation of the CR for 2009–2011

The Policy was arranged into 35 specific measures to meet nine objectives (the administrator of each objective is listed in the parentheses):

1. Establish strategic management of RDI at all levels (R&DC) – 4 measures
2. Focus the public funding of R&D on the needs of sustainable development (R&DC) – 2 measures
3. Improve the efficiency of the system of public support of RDI (R&D Council) – 5 measures
4. Apply the results of R&D to innovation and improve the public-private cooperation in RDI (Ministry of Industry and Trade (MIT), MEYS, and TA CR) – 10 measures
5. Strengthen the engagement of the Czech Republic in the international cooperation in RDI (MEYS, MIT, and AS CR) – 3 measures
6. Secure quality human resources for RDI (MEYS, MIT, and AS CR) – 3 measures
7. Create in the Czech Republic an environment which stimulates RDI (MEYS with MIT and AS CR) – 3 measures
8. Provide effective links to policies in other areas (R&DC) – 2 measures
9. Rigorously evaluate the RDI system (R&DC) – 3 measures

The document included the Priorities of Applied Research, Development and Innovation. The NRDIP and the Priorities of Applied Research, Development and Innovation are available in Czech at <http://www.vyzkum.cz/> under the heading Dokumenty / Archiv - Národní politika VaVal. In its National Reform Programme, the government committed to gradually increase the GDP share of public spending on RDI to eventually reach 1 % of GDP in 2020.

1.1.2 Update to the National Research, Development and Innovation Policy of the Czech Republic for 2009–2015 and Projections until 2020

The Update to the National Research, Development and Innovation Policy of the Czech Republic for 2009–2015 and Projections until 2020 (2013 Update to NRDIP) was approved by Government Resolution No. 294 of 24 April 2013. The same resolution required that the updated National Research, Development and Innovation Policy should be submitted to the government by 31 December 2015.

The 2013 Update to NRDIP covered several aspects to which the existing NRDIP had devoted limited space, such as innovation or the linking of educational, research and innovation activities together. Innovation was approached as an interactive process, wherein the interaction among the stakeholders in the RDI system, including the customers who are users of the resulting innovations, generates positive effects. The 2013 Update to NRDIP thus placed a greater emphasis on creating an environment and conditions for introducing innovations into the private and public sectors, and linking stakeholders together to encourage effective transfer of new knowledge and market stimuli.

1.1.3 The National Research, Development and Innovation Policy of the Czech Republic for 2016–2020 (NRDIP 2016)

The National Research, Development and Innovation Policy of the Czech Republic for 2016–2020 (NRDIP 2016) approved by Government Resolution No. 135 of 17 February 2016 aimed to provide favourable conditions for creating new knowledge, promote its conversion into innovation, and contribute to fulfilment of the vision. NRDIP 2016 focused on key areas, such as the management of the RDI system, the public sector of RDI, collaboration between the private and public sectors of RDI, innovation in enterprises, and RDI focusing. The document set strategic and specific objectives and defined relevant measures. The key to implementing NRDIP 2016 was to implement appropriate strategic management of the RDI policy, and efficient use of funds from the state budget and from European Structural & Investment Funds. One of the main planned steps was to establish a new Ministry for Research and Development (MRD) which would incorporate both the CSF and TA CR and assume a major portion of the R&D competences of the Ministry of Education. The MRD was to be established by a new bill on support for research, development and innovation which was intended to supersede Act No. 130/2002 Sb. However, this bill has never been passed into law.

NRDIP 2016 set the following strategic goals:

- Establishing a stable, effective, strategically-managed and financially viable system of research and innovation
- Creating a stable and high-quality sector of research organisations which are ready for and open to collaboration and knowledge sharing
- Setting up a system of cooperating enterprises, research organisations, public administration bodies and other stakeholders to provide new resources and knowledge for innovation
- Improving the innovation performance of enterprises in the Czech Republic by boosting research activities and introducing new technologies and procedures to improve the efficiency of business processes
- Strategically focusing the support for applied research on current and potential needs of enterprises and the society

Each of the strategic objectives was divided into specific objectives for which relevant measures were identified together with deadlines and responsible institutions.

To implement and finance the measures set out in the NRDIP 2016, maximum use was to be made of the European Structural & Investment Funds which are available to the Czech Republic in 2014–2020.

Another instrument which contributed to the effective management of research, development and innovation and to the support for applied research on the national and regional levels was the National Research and Innovation Strategy for Smart Specialisation of the Czech Republic (National RIS3 Strategy) whose aim was to meaningfully channel the funding (from European, national and private sources) into the relevant sectors to support innovation. EU Member States were invited to develop their RIS3 strategies in order to identify promising areas of the economy to be supported from the ESIF. The RIS3 strategy of the Czech Republic reflected the priorities of the Czech economy to be supported by the ESIF programmes and the R&D support programmes of the MIT and TA CR. The first National RIS3 strategy of the Czech Republic was approved by Government Resolution No. 1028 of 8 December 2014. Its updated version was approved by Government Resolution No. 634 of 11 July 2016. The latest update to the National RIS3 strategy of the Czech Republic was approved by Government Resolution No. 24 of 11 January 2019.

Another change brought about by the NRDIP 2016 was an increase in the number of public funding providers from 10 to 14. The applied research needs of selected ministries were then listed in the information annex to the NRDIP 2016. In 2017, the Ministry of the Environment of the Czech Republic, Ministry of Transport, Ministry of Labour and Social Affairs and Ministry of Foreign Affairs began providing institutional funding to research organisations in their respective areas of competence (the previous provider in 2012–2016 was the Ministry of Education). Specific-purpose funding for these needs is administered under the BETA 2 cross-sectoral programme of TACR, focusing on the needs

of state administration bodies which was launched by Government Resolution No. 278 of 30 March 2016.

1.1.4 Update to the National Research, Development and Innovation Policy of the Czech Republic for 2016–2020 (Update to NRDIP 2016)

Government Resolution No. 115 of 8 February 2019 approved the Report on the Assessment of Implementation of Measures Under National Research, Development and Innovation Policy 2016–2020 (the Report). The Report was compiled in response to Government Resolution No. 135 of 17 February 2016 regarding NRDIP 2016. To maintain continuity, the new government maintained the measures until the end of the period of the national policy at the end of 2020. With some measures, it became necessary to update the tools for their implementation. This involved scrapping the plan to establish the Ministry for Research and Development (as a central RDI administration office). Other measures were merged into one or split into separate steps. As a result, the Report also contained an update to the national policy for the period until the end of 2020. The update was developed in the context of the proposed changes to the measures.

1.1.5 The National Research, Development and Innovation Policy of the Czech Republic 2021+ (NRDIP 2021+)

The National Research, Development and Innovation Policy 2021+ (NRDIP 2021+) had one major objective: to build a dynamic and innovative society. Specifically, the objective could be rephrased as the Czech Republic shifting from the group of “moderate innovators”, as classified on the EU’s Innovation Scoreboard, to “innovation leaders” and scoring above the EU average. The vision of NRDIP 2021+ is to boost the country’s prosperity through a knowledge and innovation-based economy using effective support for and effective focus on RDI. This includes good welfare and living conditions and recognition of the country as a partner to European countries as well as those across the globe.

The main objective of NRDIP 2021+ is thus the same as that of the Innovation Strategy of the Czech Republic 2019 – 2030 (section 1.3). Although the documents to some extent overlap, NRDIP 2021+ focuses on innovation and mainly on research and development, which is reflected in its structure. NRDIP 2021+ comprises nine chapters:

- 1. Introduction (1.1 The Context of Development of NRDIP 2021+ and 1.2 The Focus of NRDIP 2021+)
- 2. Background to the Development of NRDIP 2021+ (2.1 Key International Documents and 2.2 Key National Documents)
- 3: Situation
- 4. Strategic Objectives
- 5. Measures
- 6. Priorities of Applied Research
- 7. Estimates of RDI Spending
- 8. List of Abbreviations
- 9. Glossary of Terms

The crucial section of NRDIP 2021+ is chapter 4 Strategic Objectives, which outlines five objectives:

- Objective 1: Establish a strategically managed and effectively funded system of research, development and innovation in the Czech Republic
- Objective 2: Support research organisations in building a motivating working environment and developing their human resources across the research and development sector
- Objective 3: Enhance the quality of and achieve international excellence in Czech research and development, open up and make the country more attractive for international research and development, and strengthen the integration of Czech RDI into the European Research Area

- Objective 4: Expand collaboration in research, development and innovation between the research sector and industry
- Objective 5: Ensure the growth of research, development and innovation in undertakings and in the public sector

Each objective comprises four to nine sub-objectives (themes) which provide further details, such as “Develop legislation for new specific-purpose support instruments for innovation and relevant processes, introduce systematic evaluation of specific-purpose support programmes, streamline the administration of RDI and secure open access to the results of R&D in line with European legislation.” The fifth chapter deals with measures for implementing each sub-objective (theme). The information includes the title of the measure, its abstract, deadlines, the responsible person, indicators of completion, relationship to strategic objectives (some measures fall under multiple objectives or themes) and an indication of whether the measure is a new one or related to the Update to the NRDIP. As this 2020 Guide was being prepared, NRDIP 2021+ was being debated by the R&D Council and its draft was published on the Council’s [website](#).

1.2 Priorities of oriented research, development and innovation

1.2.1 Long-Term Principal Research Directions

Until 2008, research and development priorities were referred to as “long-term principal research directions” (LTPRD). Despite all the effort, the LTPRD remained too broad, reflecting essentially all scientific (research) disciplines in the Czech Republic (7 directions).

The LTPRD used a single framework, comprising all seven thematic directions:

1. Sustainable development,
2. Molecular biology,
3. Energy resources,
4. Materials research,
5. Competitive engineering,
6. Information society,
7. Security research.

1.2.2 Priorities of Applied Research, Development and Innovation of the Czech Republic for 2009–2011

In 2008, the LTPRD document was reviewed. It was updated again in 2009, renamed as the Priorities of Applied Research, Development and Innovation of the Czech Republic for 2009–2011, and incorporated into the National Research, Development and Innovation Policy of the Czech Republic for 2009–2015. Due to requests for adding even more topics, the priorities failed to focus on those directions of research, development and innovation whose outcomes could be decisive for economic competitiveness and societal development. A majority of developed countries focus on between 3 and 5 priorities. By contrast, the Priorities of Applied Research, Development and Innovation of the Czech Republic for 2009–2011 had 8 priorities:

1. Biological and environmental aspects of sustainable development
2. Molecular biology and biotechnology
3. Energy resources
4. Materials research
5. Competitive engineering
6. Information society
7. Security and defence
8. Priorities of development of the Czech society

1.2.3 National Priorities of Oriented Research, Experimental Development and Innovation

The Priorities of Applied Research, Development and Innovation of the Czech Republic for 2009–2011 were substituted with new National Priorities of Oriented Research, Experimental Development and Innovation (RDI Priorities), approved by Government Resolution No. 552 of 19 July 2012.

Six Priorities have been defined, which are further divided into areas, sub-areas and sub-objectives. Their complete version can be found at <http://www.vyzkum.cz/>:

- Priority 1 – Competitive knowledge-based economy
- Priority 2 – Sustainable power industry and material resources
- Priority 3 – Environment for quality life
- Priority 4 – Social and cultural challenges
- Priority 5 – Healthy population
- Priority 6 – Secure society

The RDI Priorities build on not only the NRDIP objectives, but also the International Competitiveness Strategy 2 and the National Innovation Strategy 3, while reflecting the priority areas of the Horizon 2020 framework programme.

The Implementation of RDI Priorities was approved by Government Resolution no. 569 of 31 July 2013. The RDI Priorities cover the period until 2030 and are included in the Update to NRDIP. The Implementation of RDI Priorities requires that they are taken into account in the preparation of RDI programmes for specific-purpose funding. The RDI Priorities were also intended to inform the plan for EU Structural Funds for 2014–2020.

1.3 Innovation Strategy of the Czech Republic 2019 - 2030

The Innovation Strategy of the Czech Republic 2019–2030 (Innovation Strategy) was approved by Government Resolution No. 104 of 4 February 2019. It is a strategic framework plan which sets out the governmental policy for research, development, innovation and related areas, aiming to make the Czech Republic one of the most innovative European countries in the next twelve years. The reasons behind formulating this strategy are summarized in its foreword: “Few countries have had so many strategic documents and visions as the Czech Republic. The problem is that the country has never been very good at following them. Political inactivity, lack of identification with the planned goals, narrow sectoral perspectives, overly complex action plans, and inadequate implementation skills of the responsible persons are the main reasons why the visions were not brought to life.”

1.3.1. Background and structure of the strategy

The Innovation Strategy is structured into nine pillars as shown in the schematic illustration below. Each of these pillars identifies the institution responsible, assigns managerial responsibility and presents the starting position, goals and instruments for achieving them. With each pillar outlined on a single page, the strategy differs from its predecessors in its clear structure and conciseness. The Innovation Strategy includes an annex entitled International Comparison of the Innovation Environment in the Czech Republic, which gives an overview of the country's innovation performance in terms of simple innovation indicators (knowledge intensity) and composite innovation indicators. The Innovation Strategy works with the three most well-known ones: the Summary Innovation Index (SII), the Global Innovation Index (GII) and the Innovation Output Indicator (IOI), which classify the Czech Republic as a moderate innovator, according to SII and as an average performer among the EU 28 (GII and IOI).

The first pillar of the Innovation Strategy, Funding and Evaluation of Research and Development, concerns the entire research, development and innovation system, and is therefore discussed below. The institution responsible for this pillar is the Research, Development and Innovation Council, while the managerial responsibility lies with a member of the Board of R&D Council. The starting position is described in terms of the share of total R&D and innovation expenditure in the Czech Republic being 1.79% of GDP, of which 60% comes from business resources, and 40% is provided from governmental and European resources. The weak points of institutional and specific-purpose funding are seen in the inadequate interrelationship and proportionality of the innovation chain: basic research → applied

research → innovation → product → profit → reinvestment into research.

This pillar includes nine goals:

- raise the R&D funding (measured in % of GDP): 2020: 2.0 %, 2025: 2.5 %, 2030: 3.0%, i.e. growth of 0.1 percentage points each year; of which 1% would come from public resources and from businesses, 1.5% in 2025, and 2% in 2030;
- increase the institutional component of R&D funding for those research organisations that achieve excellent results related to defined research priorities;
- strengthen the specific-purpose support for institutions whose results find use in practice and for applied social sciences research;
- use evaluation tools to promote the orientation towards participation in Horizon Europe and maintain the availability of research funding from European funds;
- fully implement the assessment system based on Methodology 2017+, and monitor and continually review its effects with an emphasis on the impact on society;
- support those research topics which meet the following criteria: competitive basic research in global/disciplinary terms – sufficient capacity for follow-up applied research – successful application (new solutions for the quality of life, patents, licences sold, products) – relevance to the business environment and to fields with a potential for breakthrough technologies; in order to fulfil the primary goal of commercialization in final production based in the Czech Republic;
- achieve excellence in research and development by the standards of the European Research Council by 2030;
- encourage fundraising from non-public sources through financial instruments;
- simplify the conditions for and expedite the process of hiring foreign skilled staff.

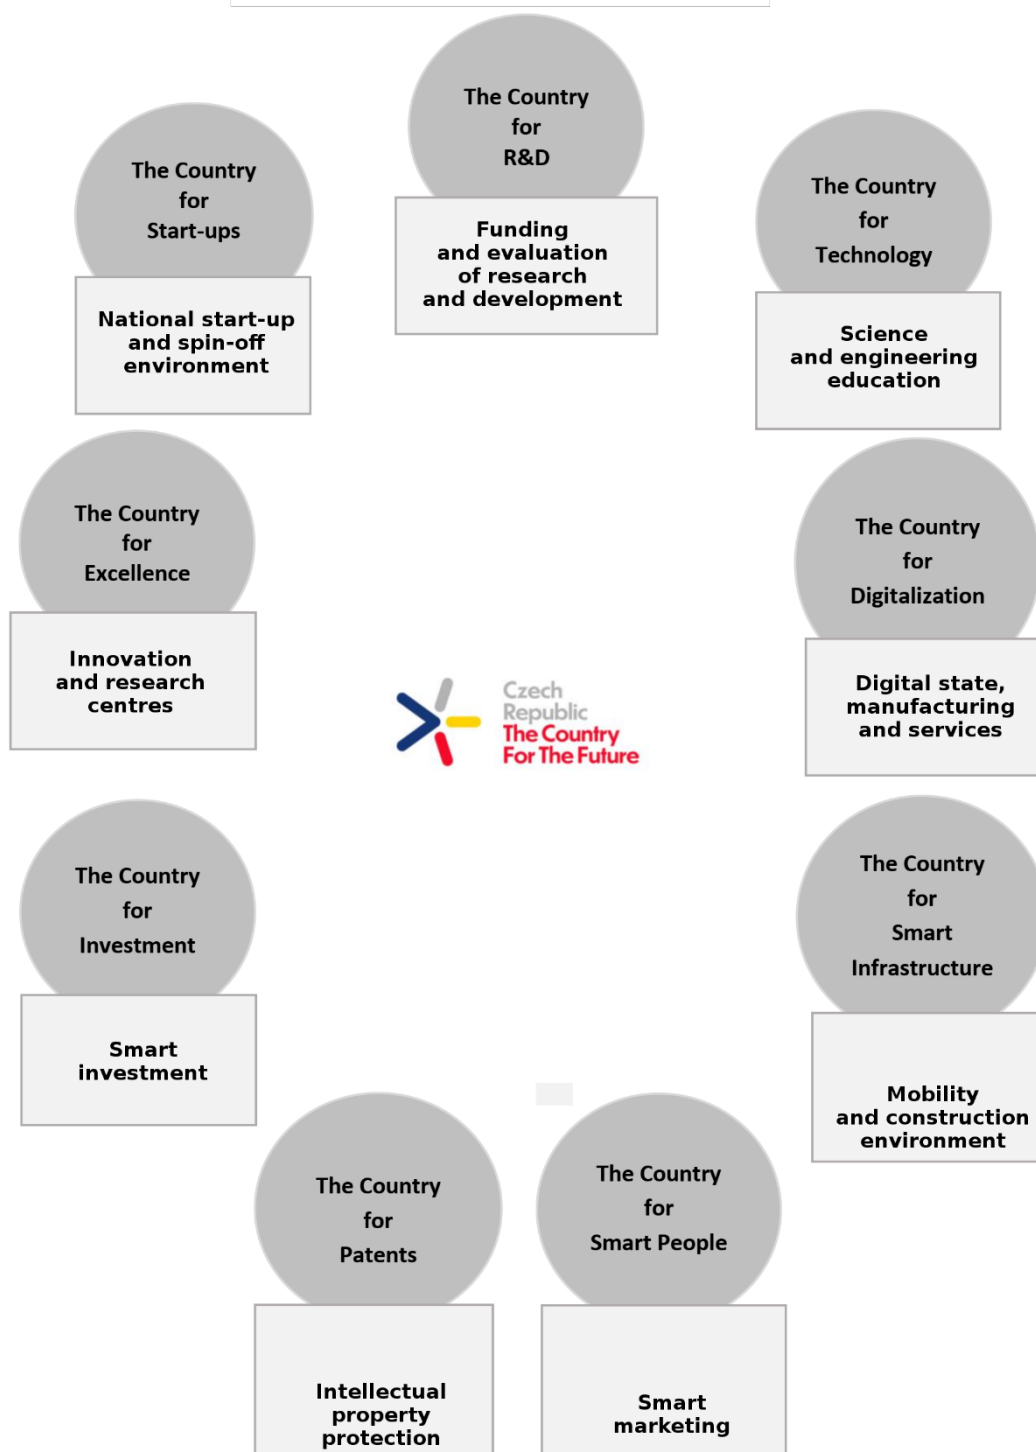

Furthermore, the pillar includes seventeen legislative, financial and organisational instruments for achieving these goals. At the time of preparation of this Guide, action plans with specific tasks were being developed for implementing the Innovation Strategy.

The other eight pillars of the Innovation Strategy have the same structure, as detailed on the website of the [R&D Council](#).

Innovation Strategy of the Czech Republic 2019-2030 – structure

Research and Development Council

1.4 Legislation and legal regulations

The legal framework of the public support for RDI in the Czech Republic is provided by:

- Act No. 130/2002 Sb., on the support for research, experimental development and innovation from public funds and on changes to certain related acts (Support of Research and Development Act), as amended.
- The implementing instrument for Act No. 130/2002 Sb. is Government Resolution No. 397/2009 Sb., on the research, experimental development and innovation information system.
- Act No. 341/2005 Sb., on public research institutions, as amended,
- Act No. 227/2006 Sb. on research on human embryonic stem cells and related activities and on changes to certain related acts, as amended,
- Communication from the Commission: Framework for State Aid for Research, Development and Innovation (2014/C 198/01)
- Commission Regulation (EU) No. 651/2014 of 17 June 2014, declaring certain categories of aid compatible with the internal market in application of Articles 107 and 108 of the Treaty – General Block Exemption Regulation
- Act No. 586/1992 Sb., on income tax, as amended

All the above-mentioned and some other regulations are available in Czech at www.vyzkum.cz, the [section Dokumenty](#).

Act No. 130/2002 Sb., on the support for research, experimental development and innovation (Support of Research and Development Act) was amended twenty times. Responding to this scope of changes, the Prime Minister promulgated in 2009 the full text of Act No. 130/2002 Sb. as Act No. 211/2009 Sb. Act No. 130/2002 Sb. was again amended by Act No. 420/2011 Sb., on changes to certain acts in relation to the enactment of the Act on the criminal liability of legal entities and proceedings against them. The 24th part of Act No. 420/2011 Sb. amended sections 7, 9 and 18 of the Support of Research and Development Act, and added the new section 14a concerning the qualifications of an applicant. Act No. 469/2011 Sb. altered the time limits for proposal submission and evaluation. Act No. 49/2013 Sb. brought changes concerning the bodies of the Czech Science Foundation and the Technology Agency of the Czech Republic. Furthermore, Act No. 194/2016 Sb. incorporated into national regulations some provisions of European legislation, namely Articles 107 through 109 of the Treaty (the “Treaty”) on the Functioning of the European Union, Regulation (EU) No. 651/2014 of 17 June 2014, declaring certain categories of aid compatible with the internal market, in accordance with Articles 107 and 108 of the Treaty (and equally Regulation (EU) No. 702/2014 regarding the agricultural and forestry sectors) and Communication from the Commission – Framework for State Aid for Research, Development and Innovation (2014/C 198/01). Act No. 194/2016 Sb. also established the List of Research Organisations, effective from 1 July 2017, where conditions and criteria are subject to the rules of administrative procedure of the Ministry of Education of the Czech Republic. Further amendments to Act No. 130/2002 Sb. resulted from Act No. 298/2016 Sb., Act No. 135/2016 Sb. and Act No. 367/2016 Sb. which altered other laws as well. Another major amendment to Act No. 130/2002 Sb. was brought by Act No. 146/2017 Sb. which updated the definition of eligible costs and cancelled the changes introduced one year earlier by Act No. 194/2016 Sb. Another change, in effect from 1 January 2019, was introduced by Act No. 367/2017 Sb. (amendment to budget rules), which maintained the continuity of the existing specific-purpose funding scheme, except for specific academic research, and therefore its exemption from some provisions of the Rules of Administrative Procedure, as opposed to institutional funding. The latest changes are those introduced by Act 277/2019 Sb. related to the Act on Collection of Laws and International Treaties and Act No. 50/2020 Sb. which came into effect on 12 March 2020 and reflected changes in institutional funding (ending the rigidly formal science assessment system known as “coffee grinder”) and the duty of large research infrastructures to deliver results.

Responding to the abundance of amendments and to the efforts to establish a Ministry for Research and Development, the R&D Council formulated the substance of a new bill in 2016 and, one year later, the actual bill on the support for research, development and innovation to supersede Act No. 130/2002 Sb. The substance of the new bill was approved by Government Resolution No. 719 of 24 August

2016 but failed to be passed into law, as the government resigned after the general elections. A major amendment or even a new law to govern the support for research, experimental development and innovation is envisioned as one of the tools of the Innovation Strategy. A major amendment to the Act is debated. It is intended to incorporate aid for innovation into the Act (as it is only referred to in the name of the Act), streamline administration in RDI and deliver a number of changes which have been long discussed. As this Guide 2020 was being prepared, this amendment was debated by the R&D Council and its draft was published on the Council's [website](#).

The implementing instrument for Act No. 130/2002 Sb. is Government Resolution No. 397/2009 Sb., on the research, experimental development and innovation information system, which identifies the data relevant to individual parts of the information system.

Act No. 341/2005 Sb., on public research institutions, as amended, has transformed a majority of the RDI institutions funded by contributions from the state budget to new legal entities. It has been amended nine times. It provides for the following:

- a) The method of establishment, entry in the register, operation, methods of dissolution, and deletion from the register of public research institutions,
- b) The positions and competences of the establishing entities, and of bodies of public research institutions,
- c) The transformation of research institutions funded by contributions from the state budget to public research institutions.

Act No. 227/2006 Sb., on research on human embryonic stem cells, allows research on these cells to be conducted under transparent conditions. It also addresses importing and exporting embryonic stem cells and prohibits the export of embryos for research purposes. It has been amended nine times.

In 2014, the European Commission issued Regulation (EU) No. 651/2014 of 17 June 2014, declaring certain categories of aid compatible with the internal market in accordance with Articles 107 and 108 of the Treaty – General Block Exemption Regulation (GBER). GBER superseded Commission Regulation (EC) No. 800/2008 which declared certain categories of aid compatible with the internal market in accordance with Articles 107 and 108 of the Treaty (the earlier General Block Exemption Regulation). The European Commission thus permitted exemption from the notification requirement and, where applicable, shortening or even omitting the notification proceedings in research, development and innovation altogether, provided that the conditions of GBER were met, whereas these requirements are normally mandatory for any form of state aid for research, development and innovation.

On 27 June 2014, the European Commission issued a new Framework for State Aid for Research, Development and Innovation (2014/C 198/01) (Framework), which superseded the Community Framework for State Aid for Research, Development and Innovation (2006/C 323/01). The Framework governs the conditions for the operation of research organisations and their non-economic and ancillary economic activities which are compatible with the internal market of the EU.

In 2014, the GBER and the Framework led to several changes which were important to research, development and innovation in the Czech Republic, namely:

- 1) New definitions of terms in the GBER (Article 2, points 83–98), and in the Framework (point 15, paragraphs a–jj):
 - Instead of the term “applied research”, the term “industrial research” is used,
 - “Applied research” is therefore now defined as “industrial research, experimental development or their combination”,
 - For the term “project”, objectives were specified as mandatory elements, for whose achievement all activities, costs and requirements must be stated in order for the (anticipated) results to be assessed and compared to the objectives,
 - For “research and knowledge-dissemination organisations” (research organisations – RO), the scope of non-economic activities was expanded to include knowledge transfer, whereas the interpretation of “education” was narrowed to public education,

- “Knowledge transfer” now comprises predominantly research collaboration, consultancy, licensing, spin-off creation, publication, and mobility,
- “Collaborative research” subject to effective collaboration (between ROs or between an RO and an undertaking under the conditions of point 28 of the Framework) is now expressly defined as a non-economic activity,
- “Contract research” (research on behalf of undertakings) – provision of services, equipment lease, and other activities are expressly defined as economic activities,
- There is a new definition of the term “research infrastructure” which only applies to equipment, resources and services for research,
- “Exclusive development” means the public procurement of research and development services,
- “Pre-commercial procurement” is now defined as sharing the results between the contracting entity or authority and the provider (e.g. prototypes, test series, and others).

2) Increased notification thresholds (Art. 4, point 1, paragraph i) of the GBER):

- Two-fold increase (current levels: EUR 40 million for fundamental research, EUR 20 million for industrial research, and EUR 15 million for experimental development).

3) Incentive effect (Art. 6, point. 2 of the GBER, points 62–65 of the Framework):

- Simplification – with small and medium enterprises (SMEs), an application for funding prior to commencing the work is sufficient (section 14, paragraph 3 of Act No. 218/2000 Sb., on budget rules, sets out the elements of such applications), whereas large enterprises may be required by the public funding provider to provide additional information.

4) Aid intensity (Art. 7 of the GBER, points 73–77, 89, and Annex II to the Framework):

- A ratio of total public funding and total approved costs of the project (i.e. not just the proportion of the specific-purpose funding), formerly “aid rate”,
- The maximum basic aid intensity remains unchanged but the calculation method used for aid increase is modified slightly (for industrial research and experimental development in SMEs).

5) Cumulation of aid (Art. 8 of the GBER, paragraphs 83–93 of the Framework):

- Cumulation of aid is allowable from various R&D sources (including various projects and institutional funding for development of research organisations) and even from sources outside R&D (i.e. those governed by other Articles of the GBER).

6) Eligible costs (Art. 25, point 3 of the GBER, point 73a of the Annex I to the Framework):

- Specified mainly in terms of personnel costs (overhead costs should not include personnel costs directly related to the project).

7) Investment in research infrastructures (Art. 26, point 6 of the GBER):

- The aid intensity must not exceed 50 % of the eligible costs.

Research and development and its public funding are governed not only by the aforementioned rules but also by other related legislation which sets out limits for state intervention in competition (the Public Support Act No. 59/2000 Sb.), provides for public procurement, defines the status of state research organisations and the grant policy (Budget Rules Act No. 218/2000 Sb.), defines the status of the Academy of Sciences of the Czech Republic, establishes institutions of higher education, governs the rules of public administration information systems, and other matters. In addition, research and development are provided for by general legal rules for contractual relations, protection of industrial rights, provision of information, and auditing.

As of 1 January 2005, amendments to Act No. 586/1992 Sb., on income tax (Income Tax Act), introduced a deduction from the tax base equal to 100 % of expenses on R&D, i.e. approximately one quarter of the grant awarded to meet the total project costs.

Act No. 458/2011, which was due to take effect in 2015 as an amendment to this Income Tax Act, retained the support for R&D projects through the deduction of project costs from the income tax base

(deduction of 100 % of costs) but introduced two key changes. Firstly, the deductible expenses can include those services for research and development projects which were provided by public higher education institutions or by research organisations. Secondly, the total deduction rate has been increased from 100 % to 110 % for expenses which increased over the previous period. The statutory measure of Senate No. 344/2013 Sb., which was passed in response to the new Civil Code, altered the provisions regarding tax deductions for research and development, and brought the effective date of the above Act forward to 1 January 2014. In 2017, the General Financial Directorate issued Information on research and development projects as a prerequisite for tax deduction for research and development support, pursuant to section 34, subsections 4 and 5 of the Income Tax Act, which stipulates the relevant project elements.

1.5 Budget for research, development and innovation

1.5.1 Draft budget preparation

The key player in preparing the initial draft of the budget for research, development and innovation is the Research and Development Council (R&DC). When it comes to the final draft, the decisive institutions are the Ministry of Finance, the government, and the Chamber of Deputies of the Czech Republic. Once the state budget is approved by the Chamber of Deputies, the Ministry of Finance allocates funds to individual budget agencies – the public funding providers.

The preparation of the draft budget has several stages (those described below apply to the RDI budget for 2020):

1. In November (2018), the R&D Council approved the R&DC Guideline for Drafting State Budget Expenditure of the Czech Republic for Research, Development and Innovation for 2020-2022 with Projections until 2026.
2. In December (2018) the R&DC proposed to the funding providers the total spending on research, development and innovation for individual budget headings and the amount of institutional and specific-purpose expenditure for the period 2020 - 2022,
3. In January (2019), budget agencies, i.e. funding providers, submitted detailed proposals of spending for the coming year (2020) and draft medium-term projections for the next two years (2021 - 2022),
4. In February (2019), the R&DC and budget agencies discussed these proposals,
5. At the end of April 2019, the R&D Council approved a draft budget for circulation for comments from the ministries,
6. On 20 May 2019, Government Resolution No. 352 approved the draft of state budget spending on RDI for 2020, the medium-term projections for 2021 and 2022 and the long-term projections until 2026,
7. In September (2019) the government approved the state budget bill for 2020 (including the spending on research, development and innovation according to the Government Resolution from May) and presented it to the Chamber of Deputies.
8. The Chamber of Deputies debated the state budget bill for 2020 in the first reading, after which it was no longer possible to alter the overall spending and revenues. The bill was then debated in the parliamentary committees, which was followed by second and third readings, approving motions to amend the bill, enactment, signing into law by the president, and publishing as Act No. 355/2019 Sb. The total allocation for 2020 is CZK 36,247 million.

Once the budget was approved by the Chamber of Deputies, its items were specified in detail over one month, after which relevant funds were released to recipients in line with conditions of programmes and activities. In the field of research, development and innovation, the release of funds is conditioned on meeting the requirements stipulated by Act No. 130/2002 Sb., as amended. The main ones concern the beneficiary's fulfilment of its 2019 obligations from the running projects, and entering relevant data about projects and other RDI activities into the RDI Information System. For running projects, Act No. 130/2002 Sb. stipulates a maximum time limit for providing the funds as 60 days from the start of the calendar year. With new projects and other activities, the 60-day period starts on the effective date of the contract or the grant award decision. If the beneficiary is in default of

its performance, the public funding provider is entitled to enter into a contract with the next-ranking applicant entity. If the public funding provider is in default, the beneficiary is entitled to a compensation corresponding to the planned project costs for the period of the default.

In previous years, this standard procedure was delayed and the draft state budget for RID was submitted to the government at the end of June or in July. In 2010 and 2011, the government did not approve the draft budget submitted by the R&D Council. Based on a proposal by the Ministry of Finance, the government then defined the total spending on research, development and innovation in September in its state budget bill of the Czech Republic for the coming year. In 2012, the government approved the proposed RDI spending of the state budget for 2013 and the projections for 2014 and 2015 via its Resolution No. 458 of 26 June 2012. These expenditures were lower than those planned for 2012. However, in September 2012, the expenditures of the Academy of Sciences of the Czech Republic were increased in the course of the debate on the state budget bill for 2013. As a result, the total RDI expenditure of the 2013 state budget was CZK 26.1 billion, approximately CZK 0.5 billion less than in the previous year.

In 2013, the budget preparation process was even lengthier. The RDI expenditure proposal for the 2014 state budget with projections for 2015 and 2016 was approved by Government Resolution No. 518 as late as 3 July 2013. There was an increase for this period (i.e. 2013–2016) of CZK 2.1 billion. However, this proposal was subsequently revoked and substituted with Government Resolution No. 729 of 25 September 2013, On the State Budget Bill of the Czech Republic for 2014, and the Proposals of Medium-Term Projections for the State Budget of the Czech Republic for 2015 and 2016 and on the Revocation of Government Resolution No. 518 of 3 July 2013 on the Proposal of RDI Expenditure of the State Budget of the Czech Republic for 2014 and the Projections for 2015 and 2016. As a result, the state budget spending on research, development and innovation for 2014 was approved at CZK 26.6 billion.

In 2014, the proposed state budget spending on research, development and innovation for 2015 was again approved only as part of the state budget bill of the Czech Republic for 2015 and the medium-term projections for 2016 and 2017, reaching CZK 26.9 billion.

In 2015, the RDI expenditure proposal for the state budget for 2016 was approved by Government Resolution No. 380 of 25 May 2015. The RDI expenditure for 2016 was thus increased to CZK 28.6 billion, with a reserve of additional CZK 0.5 billion. By this 0.5 billion, the RDI expenditure of the state budget for 2016 was increased to CZK 29.1 billion through Government Resolution No. 748 of 23 September 2015.

In 2017, preparation of the draft of state budget expenditures on research, development and innovation for 2018 began relatively smoothly. The R&D Council draft was approved by Government Resolution No. 385 of 22 May 2017. Three weeks later, however, a proposal by the Ministry of Finance, which reduced the spending on RDI by CZK 1.8 billion, was approved by Government Resolution No. 442 of 14 June 2017 on the preparation of the state budget of the Czech Republic for 2018. Hence, two state budgets were developed simultaneously over the next three months, with all the difficulties arising from such a situation. It was the government bill on the 2018 state budget, which was approved by Government Resolution No. 674 of 25 September 2017, which merged both proposals. The core was the document from May, with some alterations from the June version.

In 2018, the draft of the Czech state budget spending on research, experimental development and innovation for 2019, the medium-term projections for 2020 and 2021 (and the long-term projections until 2025) were developed in a standard fashion, much as in 2019 when the Czech state budget spending on research, experimental development and innovation for 2020 was prepared along with projections for 2021 a 2022 and long-term projections until 2023.

The draft of the Czech state budget spending on research, experimental development and innovation for 2021, the medium-term projections for 2022 and 2023 (and the long-term projections until 2027) were prepared in the same way and time frames as last year. However, at the time of preparing this Guide 2020, it was impossible to predict the effects of the pandemic on the process.

1.5.2 Structure of the RDI budget

The public funding of research and development has two forms:

Specific-purpose funding for research projects and other activities. Specific-purpose funding is provided by budget agencies through subsidies to legal or natural persons or through increased spending on organisational units of the state, organisational units of regional self-government units or organisational units of ministries engaged in research and development, in the following forms:

- **“Open-grants”** for basic research, i.e. funding for projects proposed by natural or legal persons, where the beneficiaries themselves determine the objectives and methods of investigation.
- **“Programme funding”** for applied research, development and innovation projects which meet the objectives of programmes designed and launched by public funding providers. The programmes are designed and announced by budget agencies, reviewed by the Research and Development Council, and approved by the government. Some of them support “projects for state administration”, for which the desired results are defined by the state administration itself. Since the sole user of those results is the state, the public tenders are announced in accordance with Act No. 137/2006 Sb.,
- **Funding of specific academic research**, which is defined as research carried out by students in accredited doctoral or Master’s study programmes in direct relation to their education,
- **Funding of large infrastructures for research, development and innovation**, where individual projects are approved at the government level.

Institutional funding for research organisations and other activities:

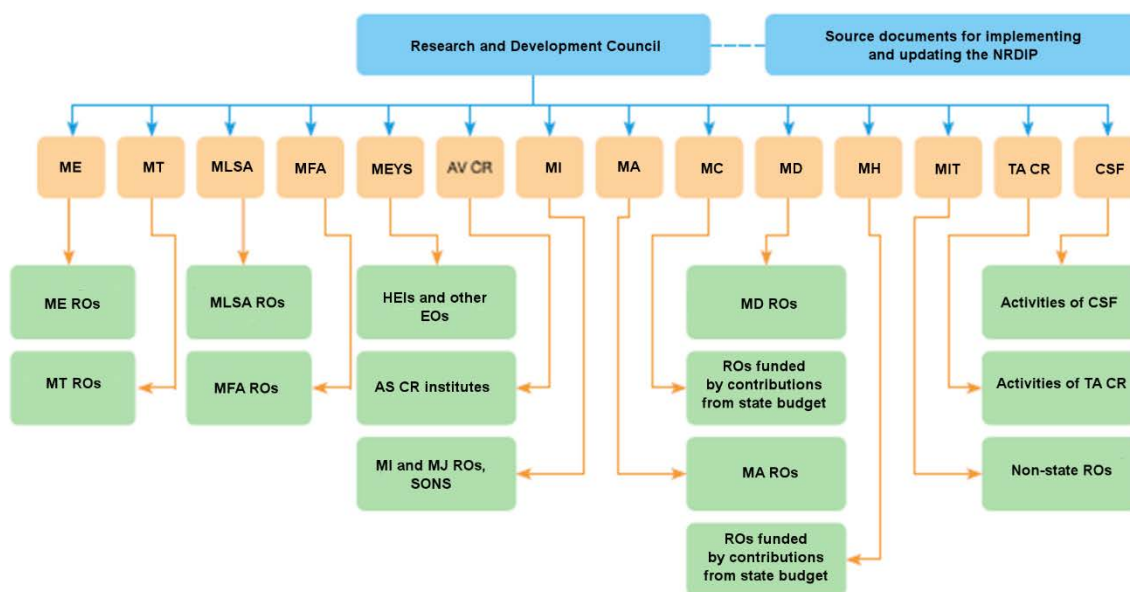

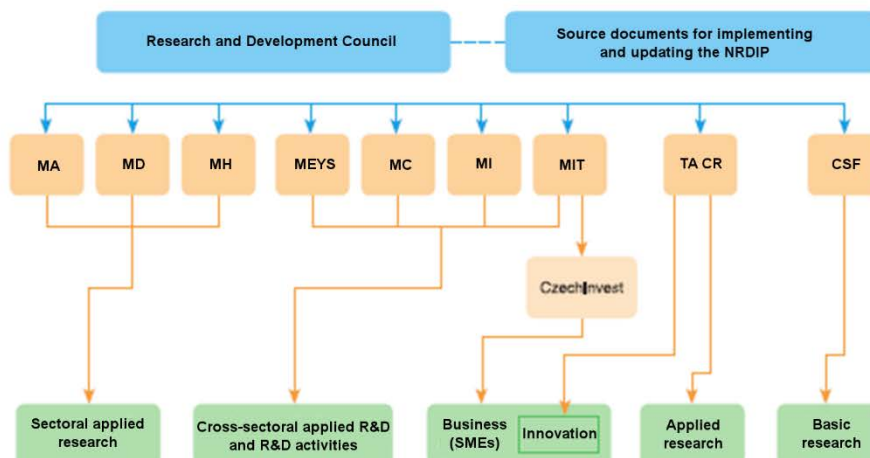

- **Long-term conceptual development of a research organisation** based on assessment of its results from 2018 (this includes funds being transferred from completed projects under National Sustainability Programme I).
- International cooperation of the Czech Republic in research and development on the basis of international agreements, which includes fees for the country’s participation in international programmes and membership in organisations, as well as the funding of international collaboration projects where the projects are selected by the European Union or another international organisation (e.g. Horizon 2020),
- **Operational programmes in research, development and innovation**, or parts thereof, where the projects are selected through a competitive bidding process according to the GBER. The government expenditure on RDI is used for 15% co-funding of RDI-related operational programmes for which the European Commission provides the remaining 85% of public funding. In previous years, this arrangement was used for the RDIOP (MEYS) and, in modified formats, for the ECOP (MEYS) and EIOP (MIT) programmes. These operational programmes had ended (the last projects finished in 2015) and were replaced with the Research, Development and Education Operational Programme (RDEOP) administered by the Ministry of Education and the Enterprise and Innovation for Competitiveness Operational Programme (EICOP) of the Ministry of Industry and Trade.
- **Costs of the system of support for research, development and innovation**, namely the costs of public tenders and project evaluation, awards and other expenses, as well as the operating costs of the Research and Development Council, Czech Science Foundation, Technology Agency of the Czech Republic and the Academy of Sciences of the Czech Republic.

The institutional funding for development of research organisations follows certain conditions. From 2007, it was the Community Framework. As of 2014, it is the Framework for State Aid for Research, Development and Innovation. The funding is available to research organisations, i.e. all public and

private legal entities, which meet the provisions of Act No. 130/2002 Sb., as amended. In relation to research organisations, these provisions require the following:

- The beneficiary's main purpose is to carry out basic research or applied research or applied development and they disseminate their results through teaching, publishing or technology transfer.
- Their profits are invested back in said activities.
- Preferential access to their research capacities or results is not available to entities engaged in economic activities consisting in offering goods or services, which could exert influence on the research organisation.

Specific-purpose support for RDI

Institutional support for RDI

1.5.3 Identification of research organisations

The decision on whether an entity meets the definition of a research organisation is the responsibility of the public funding provider, in accordance with Articles 107 and 108 of the Treaty on the Functioning of the European Union (TFEU) and the new Framework for State Aid for Research, Development and Innovation. The Research and Development Council has reviewed the fulfilment of the conditions. In early 2017, the Council published the latest List of Identified Research Organisations (reflecting the state as of 2 February 2017) (www.vyzkum.cz / Posuzování VO). On 1 July 2017, according to section 33 (a) of Act No. 130/2002 Sb., the MEYS began reviewing applications for entry in the list of research organisations on the basis of the rules of administrative procedure (the implementing instrument is government resolution No. 160/2017 Sb.), and therefore the Research and Development and Innovation Council finished the review. After 1 July 2017, all research organisation

had to apply with the MEYS for registration in the list of research organisations and submit documents defined in the implementing instrument.

Until 2018, the amount of institutional funding allocated by the state budget to each provider's research organisations mainly depended on the results they had produced. In addition, these research organisations had to be identified as such by the R&D Council. From 2018 onwards, the additional funding beyond the 2016 amount is allocated on the basis of the evaluation of research organisations (although some public funding providers will adopt this arrangement no sooner than in 2019). Competent public funding providers now have the authority to decide on providing institutional funding for the development of research organisations.

1.6 Evaluation of results produced by research organisations

The evaluation of results produced by the research organisations which receive public funding only started after the year 2000. Evaluations before then typically took the form of "self-evaluation", if performed at all. The National Innovation Policy of the Czech Republic for 2005–2010 therefore called on the R&D Council to develop and continuously improve the methodology of research evaluation. A number of changes have been made since 2004, when the Methodology of Evaluation was drafted and used for the first time. The document, as well as the results of evaluations, is available in Czech at <http://www.vyzkum.cz>, in the "Hodnocení VaVal" section.

The Methodology of Evaluation of Research Organisations and Results of Completed Programmes (for 2010 and 2011) did not differ significantly from the 2012 version. It provided for evaluating only those results which met the relevant definitions, the conditions for being entered in the Research, Development and Innovation Information System of the Czech Republic (RD&I IS), and which were actually entered in this system.

The 2012 Methodology had the following elements:

- No evaluation of the effectiveness of research organisations (ROs) was conducted.
- The evaluation of results only applied to those ROs which were eligible for institutional funding according to the rules approved by the R&D Council, and according to the current government-approved draft of state budget spending on RDI. Some ROs could have been added upon discussion on the draft budget for the coming year between the R&D Council and the public funding providers.
- The evaluation covered results applied in the previous five years, regardless of the funding source used for achieving them.
- In accordance with Act No. 130/2002 Sb., the evaluation also applied to new results which were entered in the Information Register of R&D Results (IRRDR) between 30 May of the previous year and 30 May of the year of evaluation, or until 29 May 2012.
- In accordance with the mentioned Act, the evaluation of results of completed programmes included results which had already been evaluated as results of ROs but were also related to the relevant programme, and the results produced by other beneficiaries under that programme which had been entered in the IRRDR within 250 days of the end of support..

The Methodology of Evaluation of Research Organisations and Results of Completed Programmes (for 2013–2015) was approved by Government Resolution No. 457 of 19 June 2013.

It relied on three interrelated pillars which brought about the following changes:

- **Pillar I: Subject-based evaluation of publications.** For each subject group, the methodology defined the relevant types of results and their maximum share of available points. This evaluation pillar comprised the so-called Subpillar I, which defined the peer review process and methods for selected types of results, e.g. books, chapters in books and articles in peer-reviewed journals without impact factor.
- **Pillar II: Evaluation of quality of short-listed results.** Its objective was to introduce a democratic principle, whereby each RO has the right to select and submit a limited number of results for expert evaluation. Within each subject group, an expert panel, planned to include a

considerable share of foreign experts, selected no more than 20 % of those results to be awarded a special bonus. In addition, a special excellence bonus was awarded to those research organisations whose members succeed in obtaining project funding from the ERC (European Research Council).

- **Pillar III: Evaluation of patents and non-publication results of applied research.** As opposed to the previous practice where all non-publication results of research had been awarded fixed numbers of points, this rule only applied to patents. The point scores for all the other results depended on the amount of funding for applied research projects and on the volume of contract research.

In 2013, only Pillars I and III were to be applied to evaluation in full. Pillar II and the complete Sub-pillar I were to be implemented in 2014. The purpose of the 2013 transition period and the stepwise launch of the other pillars was to allow research organisations to prepare for this methodology without disrupting data collection processes that were running.

The final outcomes of the 2013 evaluation of research organisations were delayed. They were published on 30 May 2014 on the website of the R&D Council.

The R&D Council approved the outcomes of the 2014 evaluation on 18 December 2015 and subsequently published them (in Czech) at www.vyzkum.cz / section entitled “Posuzování VO”.

The evaluation of research organisations for 2015 and 2016 followed the updated Methodology of Evaluation of Research Organisations and Results of Completed Programmes. It is the one approved for 2013–2015, which was updated and extended for one more year, i.e. for 2016.

1.6.1. M17+ Methodology of Evaluation of Research Organisations and Programmes of Specific-Purpose Funding for Research, Development and Innovation

Over a long period of time, the R&DC has been developing a new system for evaluating research organisations and their institutional funding, drawing on the outcomes of a project entitled “Effective System of Research Financing, Development and Innovation” carried out as part of the IPN scheme (Individual National Projects) under the Research and Development for Innovation Operational Programme. The new Methodology of Evaluation of Research Organisations and Programmes of Specific-Purpose Funding for Research, Development and Innovation (M17+) was approved by the Government Resolution of 8 February 2017.

The goals of the M17+ are to provide input for effective management at all levels of the research, development and innovation system in the Czech Republic (the formative aspect), promote efficient use of public funds (the summative aspect), and improve the quality and international competitiveness of Czech research, development and innovation. It should inform decisions on institutional funding for long-term systematic development of research organisations (LSDRO) in line with relevant regulations, provide information for the management of the entire RDI system in the Czech Republic, data for funding providers, and support the decisions taken by the management of research organisations. The evaluation should also provide input into decisions on granting institutional funding for LSDRO, which is a motivational tool for improving the performance of ROs.

The fundamental principles of the M17+ are as follows:

- 1. Three-level evaluation.** In the RDI system, every management level requires information at a different level of detail. The M17+ comprises the following three management and evaluation levels: the entire RDI system (the central authority is the R&D Council/Office of the Government), the funding providers, and the management of ROs. The M17+ is mainly devoted to the national level, and defines the methodology for public funding providers.
- 2. Classification of ROs into three segments.** Based on their positions within the RDI system, and their missions, research organisations are divided into three segments for evaluation purposes: higher education institutions (HEI), institutes of the Academy of Sciences of the Czech Republic (AS CR), and the sectoral segment.
- 3. Common framework for quality assessment of ROs.** M17+ introduces quality assessment across five basic evaluation modules for all types of ROs: M1 – Quality of selected results, M2 – Research

performance, M3 – Societal relevance, M4 – Viability, M5 – Strategy and conceptual framework. The relative weights of modules shall reflect the position and mission of each RO in the RDI system. The modules constitute an evaluation framework which may be adapted at the funding provider level, and adjusted with respect to an RO's position in the RDI system.

- 4. Evaluation frequency.** In the implementation period, annual evaluations on the national scale will mainly use the instruments for M1 and M2 modules (bibliometric analysis or remote peer review in those disciplines where bibliometrics cannot provide relevant data for a review). Full-scale evaluation across all five modules will be in place by 2020. The target state expected to be in place beyond 2020 involves full-scale evaluations at five-year intervals.
- 5. Three basic evaluation tools.** In individual modules, the ROs will be evaluated using bibliometric analysis, remote peer review and a review by a specialist panel. After the implementation period, members of the panels will also conduct on-site visits.
- 6. Selection of ROs for evaluation.** Only those ROs will be evaluated which are listed in the Register of Public Research Institutions maintained by the MEYS. The evaluation will concern the results of ROs listed in the Information Register of R&D results.
- 7. Specialist panels.** Research organisations will be assessed by six specialist panels according to the OECD classification fields (as outlined in the Frascati Manual): Natural Sciences, Engineering and Technology, Medical and Health Sciences, Agricultural and Veterinary Sciences, Social Sciences, Humanities and the Arts. The panels will be composed of experts in applied and industrial research and specialists from industry. Where appropriate and effective, the specialist panels will be composed predominantly from independent foreign experts. In their evaluation of selected results, the panels will rely on remote peer reviews, mostly by foreign reviewers, after considering whether their use would be appropriate and effective. Finally, the panel will propose classification of each result into one of five quality classes, provide substantiation for this proposal, and submit a general report.
- 8. RO rating.** Full-scale evaluation across all modules in five-year intervals will lead to rating ROs on a four-level scale. The basis for the rating will be evaluations on the national level and on the level of public funding providers. The rating will be decided upon a discussion between representatives of the relevant public funding provider (where the public funding provider is not the founding organisation, a representative of the founding organisation will be invited as well), representatives of the R&D Council/Office of the Government of the Czech Republic, (vice-)presidents of the panels and possibly other invited experts. Results of the evaluation will be subject to approval by the R&D Council. A report will be compiled on the result of the entire evaluation of a particular RO and discussed with the RO prior to release. During the implementation period, the rating of the RO results will have indicative nature. The first long-term rating will take place in 2019.
- 9. Implementation period.** The new methodology is being adopted gradually between 2017 and 2019. The evaluation will involve results applied in the previous year. 2019 will be the first year for research organisations to be evaluated using the complete M1 module and bibliometric analysis according to M2, and for the review panels to be composed of international experts. The evaluation will cover the results for the 2014–2018 period, using the evaluation outcomes from 2017 and 2018. ROs will be rated on the above-mentioned quality scale.
- 10. Transition to five-year evaluation period.** The readiness for a full-scale evaluation differs considerably between various public funding providers and parts of the system. Some public funding providers completed evaluations at their level in 2017, others are to follow in 2018.
- 11. Principles of LSDRO funding.** The funding for long-term systematic development of research organisations will consist of two components: the stabilisation component (the base) and the motivational one (the increment). In the implementation period, the base component will equal 100% of the LSDRO expenditure for 2016 divided according to the 2013–2016 Methodology. The motivational component, which will be at least equal to the year-on-year increase in the LSDRO funding, will be allocated on the basis of evaluation. The evaluation will lead to ROs' classification into four groups: A, B, C, and D.

Public funding providers performed evaluations of research organisations according to M17+ in 2017 and 2018 and published the results on their websites. National-level evaluations according to the first and second module out of the total of five modules have been published at R&DC for 2018. Evaluations for 2019 are under way. They include publications and selected other results submitted by research

organisations as of 15 October 2019. They are governed by instructions published on R&DC website. 2020 evaluation is expected to take place on similar dates.

On 30 July 2019, the government adopted resolution No. 563 which approved the Methodology of Evaluation of Research Organisations Among Higher Education Institutions. It is an update to the M17+ document as its Annex 5. The documents which relate to its implementation are on R&D Council [website](#).

1.7 The Research, Development and Innovation Information System

The Research, Development and Innovation Information System (RD&I IS) is a public administration information system for collecting, processing, disseminating and using data on publicly-funded research, development and innovation.

The purpose and the content of the RD&I IS, its users' rights and duties, and the procedure for submitting, entering, processing and disseminating the data are set out in the Support of Research and Development Act No. 130/2002 Sb., as amended, in Government Resolution No. 397/2009 Sb., on the research, experimental development and innovation information system, in special legal regulations, and in the Operating Rules of the RD&I IS.

The RD&I IS is administered by the Research and Development Council. It is operated by the Office of the Government of the Czech Republic.

The RD&I IS consists of four interconnected registers (their Czech acronyms are listed as well):

- Register of Public Tenders in Research, Development and Innovation (PTRDI) – VES,
- Central Register of Research, Development and Innovation Activities – CEA,
- Central Register of Projects – CEP,
- Information Register of R&D Results – RIV,

and is linked to the inactive legacy Central Register of Research Plans – CEZ.

On 31 May 2016, the Research and Development and Innovation Information System, which was operated by a consortium of the Czech Technical University and InfoScience Praha (at <http://www.isvav.cz>), was closed down due to expired contract with the OG CR. The information system entitled "IS VaVal 2.7.0." (RDI Information System 2.7.0 or RD&I IS 2.7.0), now operated by the Office of the Government, can be found at <https://www.rvvi.cz/>:

The landing page of the RD&I IS 2.8.0.

The main changes in the RD&I IS, launched in early 2018 included the following:

- New types/subtypes of results were introduced in accordance with Definitions of types of results (identified as: Jost, Ekrit, Enekrit, Sdb, NmetS, NmetC and NmetA), and definitions of some types of results (such as R), criteria for their application (e.g.: P) and the web-based checking service were updated,
- New data elements: field of research for the result/project, as defined by the OECD field of research classification – Frascati Manual 2015 and the field comparison table,
- Identifiers of persons – optional fields have been added for ORCID, Scopus Author ID and ResearcherID codes and periodical e-ISSN numbers,
- The R37 fields have been expanded from 1,024 to 3,000 characters, and the R42 and R46 fields from 2,000 to 10,000 characters,
- One data export option was added to the CEP module, reflecting the actual use of funds from the state budget,
- The funding allocated for the current year can be displayed in the CEA module.

On 14 January 2019, a new version was launched: RD&I IS 2.7.0. A new feature of the public database was beta-version analytical and graphic module ANALYSIS OF RESULTS (ANV). The analysis of research results included a summary section where the user can select results by the year, public funding provider and the type of result. The other sections consist of an analysis of public institutions of higher education and an analysis of research organisations. One year later, on 20 January 2020, a new version was launched, RD&I IS 2.8.0. It included an updated and expanded classification, introduced a tracking system for updates to records and extended the search capabilities. Helpdesk services were expanded as well. All the changes are summarised on the R&D Council website (<https://www.rvvi.cz/novinky/spustena-nova-verze-is-vavai-2-8-0>).

1.8 Analyses of the Situation in Research, Development and Innovation in the Czech Republic

The documents entitled “Analysis of the Situation in Research, Development and Innovation in the Czech Republic and Comparison with the Situation Abroad” (RDI Analyses) have been prepared on a regular basis since 1999. From 2003, it is the R&D Council which compiles and submits them to the government every year. They are then published in Czech and English versions on-line and in printed form. RDI Analyses do not contain any proposals to eliminate the weaknesses or promote the strengths identified. They are, however, used as source documents for preparing important conceptual and strategic documents, namely the NRDIP. The analyses have repeatedly found slight improvements in RDI inputs and outputs in the Czech Republic, but also reported that the country was significantly and continuously lagging behind developed countries.

Eight chapters of the RDI Analysis 2018 approved at the 352nd meeting of the R&D Council on 13 December 2019 contained a review and international comparison of the main RDI indicators of the Czech Republic.

Structure of the 2017 RDI Analysis

Summary

Interpretation part

1 Financial flows in research and development

1.1 Total expenditure on research and development

1.2 Financial flows among sectors

1.3 Direct and indirect support of research and development in the business sector

2 Funding the research and development from the state budget

2.1 Process of drafting the research and development part of the state budget

Recommendations

List of abbreviations

Annex

The summary of the RDI Analysis 2018 paints a positive picture of the evolution of the Czech RDI system, as indicated by several analyses and international comparisons. Fundamental indicators show a relatively favourable environment for RDI. This means that, in a long term, research and development expenditure has been growing, as well as the number of researchers.

The interpretation part of the report is very detailed. The analysis also offers thirteen recommendations for maintaining the good performance of the effective parts of the research, development and innovation system, and for improving the rest. Some of those measures concern gathering relevant data for further analyses. These strategic recommendations developed by the Research and Development Council indicate the Council's priorities for the coming years:

- Building on the new method of assessment of research organisations which places emphasis on the quality and innovation of their output, stabilise the financial situation of research organisations by strengthening the long-term institutional funding for RDI as opposed to specific-purpose funding.
- Allocate state budget funding with greater emphasis on research and development in crucial/breakthrough areas of individual fields of science eligible for international protection of results.
- Analyse the effects of and then optimise individual financial aid instruments, in part by consistent implementation of the new assessment of research organisations and the assessment of specific-purpose support programmes for research and development and innovation to avoid the adverse impacts that all the earlier assessment methods had.
- Make interventions which motivate Czech research organisations (scientific teams) to participate in European and other international RDI programmes, particularly the EU framework programmes (Horizon Europe).
- Foster relationships between Czech and foreign partners and build long-term links to leading research facilities.
- Analyse in greater detail the links between business and public research entities (higher education institutions, institutes of the Academy of Sciences, and sectoral research facilities), with the emphasis on social and economic growth (including the proportion of employment in the high-tech sector and the corresponding growth in real wages).
- Focus on eliminating shortcomings in human resources in research and development, including gender inequality, make careers in science more sustainable by improving the conditions for balancing professional and family life, create favourable conditions for women to stay in the research sector and motivate graduates to continue scientific work.
- While planning the funding for operational and organisational development of research infrastructures, emphasise the element of institutional funding for long-term conceptual development of research organisations.
- Turn R&D centres which were built with funding from EU SF (namely the RDIOP) into hubs of long term applied research collaboration.
- Take steps to improve the quality of publication output and internationalisation, in particular in basic research.
- Implement measures that motivate research organisations to perform applied research to increase the ratio of applied results to publication results.
- Examine intellectual property protection in detail and set up appropriate conditions for research organisations and science facilities to be motivated to pursue effective licensing policy and help increase the revenue from licences and patents, where the Czech Republic lags behind other countries.
- Continue to remove the main barriers to innovation in the Czech Republic: low venture capital investments, scarce use of international patents as a means of intellectual property protection, and lack of human resources (specialized education, career rules), and then promote additional financial instruments, including guarantees, affordable loans and other for innovation development.

2. PUBLIC FUNDING OF RESEARCH AND DEVELOPMENT

Direct public funding is the primary instrument for implementing R&D policies in the Czech Republic and elsewhere. The amounts of total direct funding and public funding are among basic indicators for evaluating R&D in various countries. The EU as a whole is known to lag behind the USA and Japan, or Asian economies, in the amount of R&D spending. The Lisbon Strategy was adopted in 2000 with the objective of making the EU the most competitive global economy by 2010. In 2002, another R&D objective was announced in Barcelona: to increase the total R&D expenditure to 3% of GDP by 2010, of which one-third would come from public sources and two-thirds (2% of GDP) from private (business) sources. The EU has not achieved these objectives yet, and neither has the majority of its Member States.

The Czech Republic adopted the Lisbon Strategy as well, which has been reflected in documents that set the course of the country's R&D. The Czech Republic was closest to achieving the objective of the total R&D spending of 2% of GDP in 2014. This share has been continuously declining since 2014. In 2016, it was 1.68%, same as in 2011. Most of the investment which contributed to this came from private sources. In 2018, the country became closer to the 2% goal thanks to private and foreign sources.

2.1 Total and public spending on R&D in selected developed countries

Total and public spending on R&D in selected developed countries in 2018 (% of GDP)

Source: OECD MSTI 2019/2

Note The shares of public spending given in % of GDP for Germany, Denmark, Finland, France, Netherlands, EU28, Italy and Poland relate to the year 2017. The data for UK are from 2016.

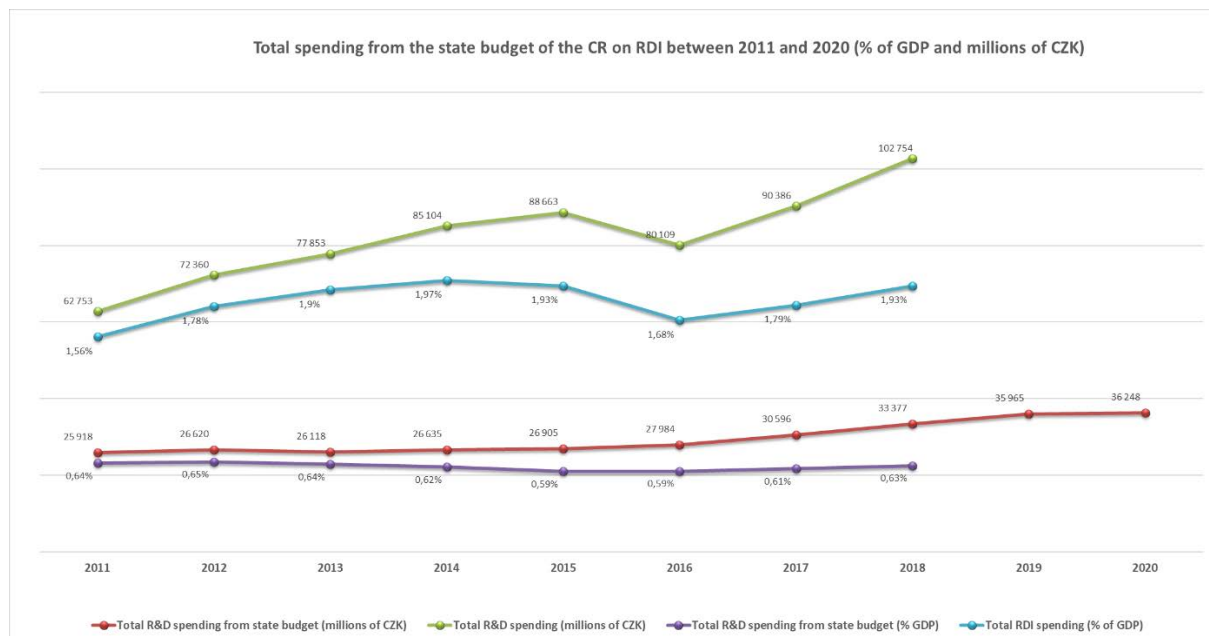

In 2017, the list of EU countries which met the first criterion of the Lisbon Strategy (total R&D spending equal to 3% GDP) included Austria, where this goal was met in 2014, Sweden, a long-standing leader in this category, and, for the first time, Denmark and Germany. France, Finland, the Netherlands and Belgium (2.7%) are above the EU average which recently rose to above 2% after a period of stagnation.

The second criterion (2% of spending coming from non-public sources) is consistently met by no other country but Germany. The EU as a whole has not met any of these criteria yet, and neither has the Czech Republic. Of the selected countries referred to in this section, the United Kingdom, Italy, Portugal, Spain, Slovakia and Poland reported lower total spending on R&D than the Czech Republic.

A high share of private investment in R&D is typical of Asian countries, such as Japan. No other EU country can report a 80% share of private spending on R&D as in Japan. Germany has the largest share, just under 65%.

2.2 Total expenditure from the state budget of the Czech Republic on research, development and innovation

Total expenditure from the state budget of the CR on RDI between 2011 and 2020 (% of GDP and millions of CZK)

Source: Czech Statistical Office, state budgets of the Czech Republic for the given years

As R&D was one of the government's main priorities, spending rose even during the crisis, despite sweeping cuts in other public spending. State budget spending on R&D continuously increased until 2013, although the rate of this increase only began to accelerate in the last four years. The years 2017 and 2018 have seen a major increase by approx. CZK 3 billion. The growth continued in 2019. The plan of spending for 2020 does not bring any substantial increase, as it fails to match the expected inflation.

In fact, when expressed as a percentage of the GDP in recent years, the spending was stagnant until 2017 when it began decrease. This means that the increasing amount of R&D spending from the state budget until 2016 did not match the growth of the entire economy. In addition, the R&D share of the total spending has been decreasing since 2014. There was an upturn in 2017 but none of the proportional indicators returned to the levels seen in previous years. The change in the total R&D spending trend was brought about mostly by the public sector and by the greater use of EU funding.

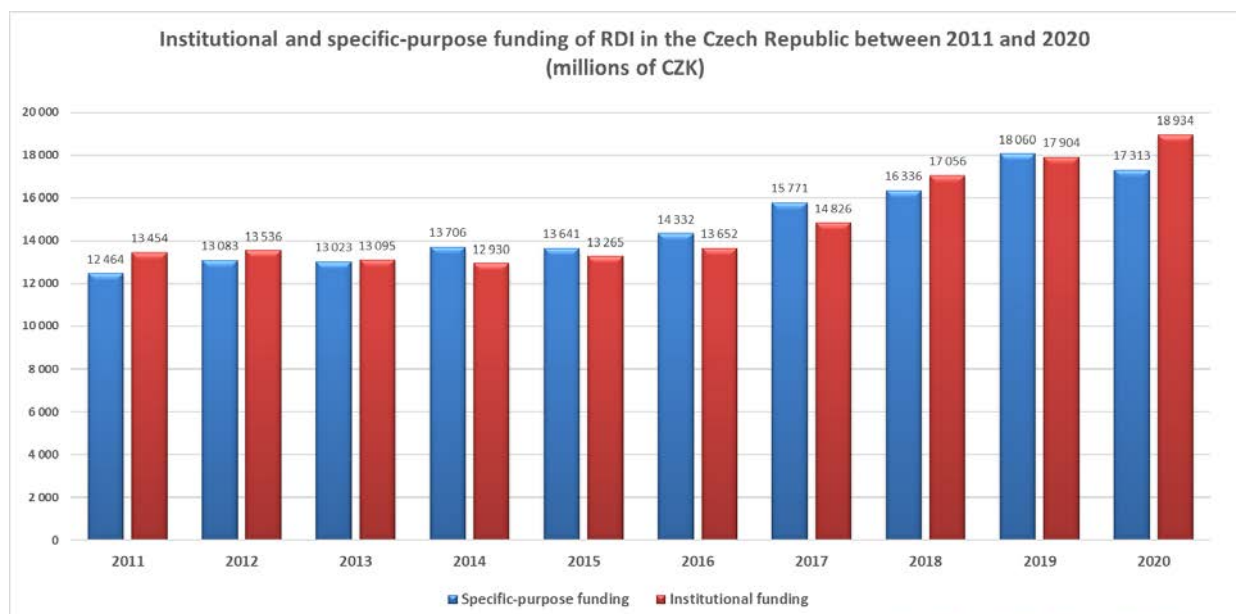

The state budget expenditures on R&D are not the only public sources available. Since 2007, Structural Funds of the EU have been gaining importance. This concerns mainly the Research and Development for Innovation and, to a lesser extent, the Education for Competitiveness and Entrepreneurship and Innovation Operational Programmes. More than CZK 100 billion from the EU resources was allocated for research and development under these three operational programmes until 2015. In 2015, these sources amounted to almost CZK 14 billion a year. However, in 2016 they were a mere CZK 2.7 billion. Since 2015, however, the newly-launched operational programmes Research, Development and Education (RDEOP) and Enterprise and Innovation for Competitiveness (EICOP) provided the necessary sources. In 2018 they reached CZK 8.9 billion.

2016 saw a year-on-year decrease in the total spending of CZK 8.5 billion to CZK 80.1 billion, i.e. a 9.6% drop. The transition to a new programming period of European funds is reported as one of the main causes.

Comment on the differences: As the OECD, the Czech Statistical Office and the state budget each rely on a different method of calculation, the absolute and relative values may differ.

2.3 Institutional and specific-purpose funding from the state budget for research, development and innovation

Institutional and specific-purpose funding of RDI in the Czech Republic between 2011 and 2020 (millions of CZK)

Source: State budgets of the Czech Republic for the given years

The total state budget spending on R&D is divided into two streams. The first is specific-purpose funding, and the second institutional funding.

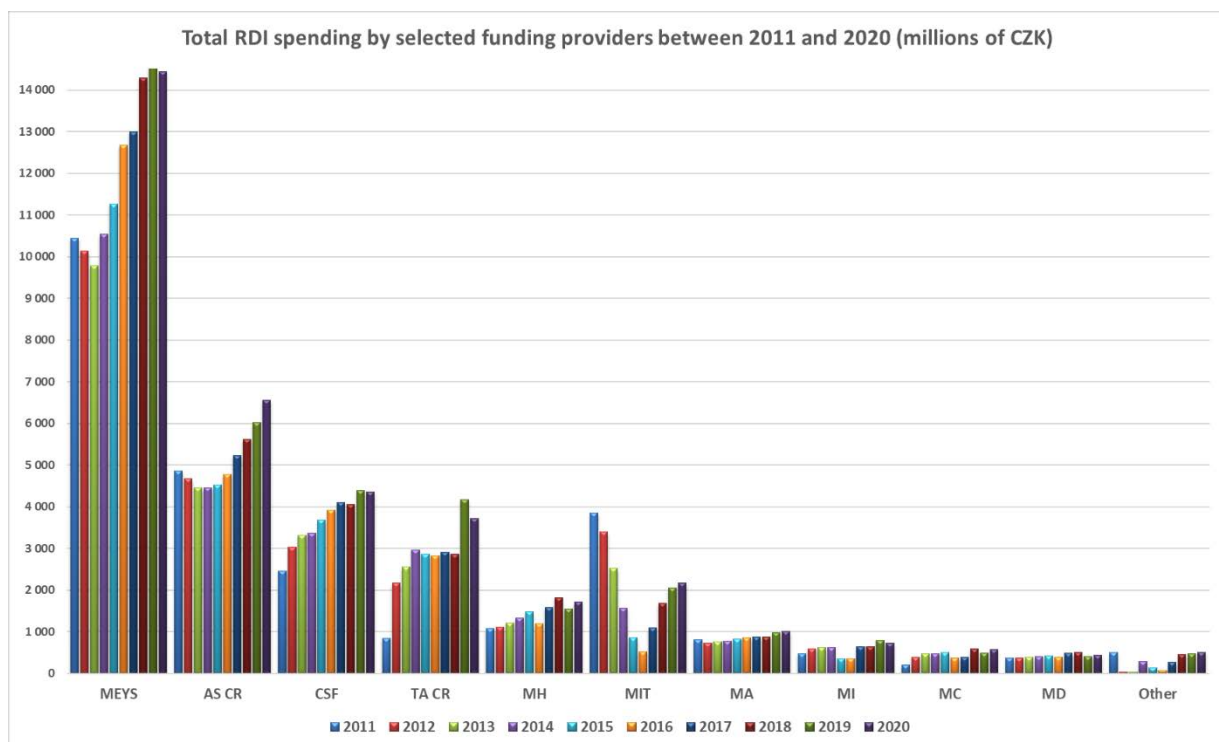

Specific-purpose funding is distributed predominantly through public tenders for selected research projects. These include open-grant projects, where the objectives and methods of basic research projects are determined by the researchers themselves. Then there are programme projects in applied R&D which aim to fulfil the objectives of a particular programme. Specific-purpose funding also goes to those research projects that fulfil the needs of the state (public research and development contracts). Finally, it is also provided for expanding R&D infrastructures and for specific academic research.

The dominant form of institutional funding provided to research organisations today is reimbursement of the costs of their development based on evaluation of their results., which includes the remaining funds transferred from the soon-to-end projects under the National Sustainability Programme I. Institutional funding is also awarded for certain activities in international R&D cooperation and as co-funding for operational programmes in RDI. Finally, institutional funding meets the costs of public tenders, evaluation procedures, and financial awards for extraordinary achievements, as well as the operating costs of the Academy of Sciences of the Czech Republic and other institutions. The ratio between institutional and specific-purpose funding in the Czech Republic cannot be compared to similar indicators abroad because their structures differ.

After 2001, institutional funding was higher than specific-purpose funding. In the past, the R&D Council strove to reduce the differences between them. Specific-purpose funding tends to be awarded on the basis of competition, whereas institutional funding is in fact often granted automatically, once the beneficiary meets certain basic conditions. However, the data gathered after 2010 are not directly comparable with those from the previous years. This is due to changes in R&D funding (e.g. the funding for specific academic research used to be reported as institutional funding until 2009, whereas from 2010 it has been classified as specific-purpose funding). 2014 was the first year when the amount of specific-purpose funding exceeded the institutional funding. The institutional and specific-purpose funding have been equal in recent years.

2.4 Expenditure on research, development and innovation by selected public funding providers

Specific-purpose funding of RDI by selected public funding providers between 2011 and 2020 (millions of CZK)

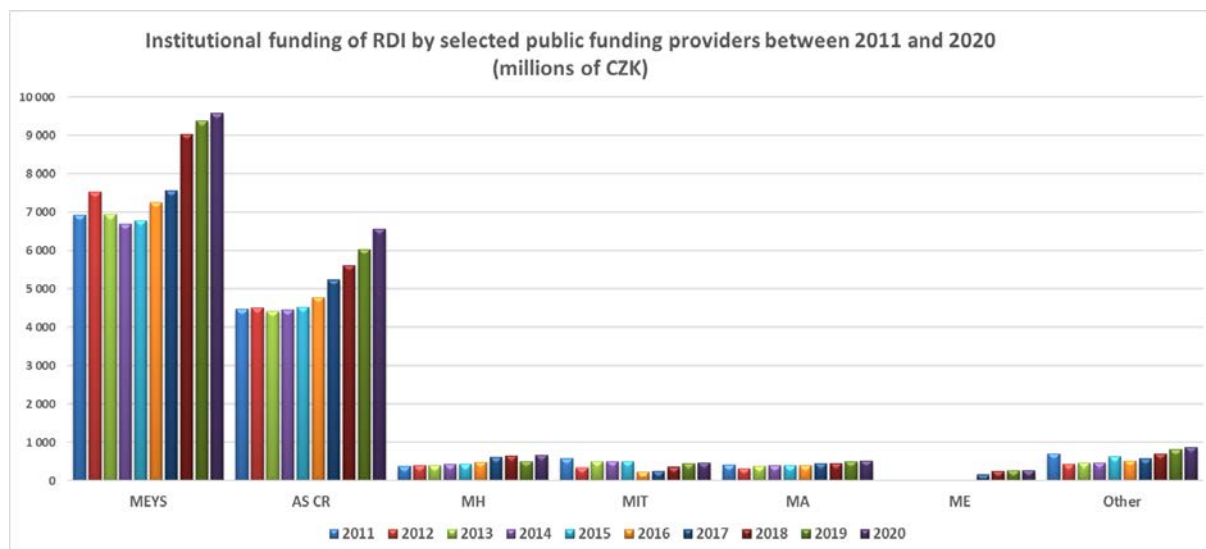

Source: State budgets of the Czech Republic for the given years

The graph shows the history of total funding from ten public funding providers. The data for four other providers – Ministry of Environment, Ministry of Labour and Social Affairs, Ministry of Transport and Ministry of Foreign Affairs – are indicated as “Other”.

The Reform of the Research, Development and Innovation System from 2008, which was approved by the government, reduced the number of state budget headings (and therefore the number of corresponding public funding providers) for R&D from 22 to 11. (The eleventh one, from which no external organisations are funded, is administered by the Office of the Government of the Czech Republic, and is used for funding the operation of the Research and Development Council.) In 2017, the number of funding providers rose to 14 (and the number of budget headings increased to 15); the institutional funding providers are, again, the Ministry of the Environment, Ministry of Transport, Ministry of Labour and Social Affairs and Ministry of Foreign Affairs.

2.5 Institutional funding of research and development by selected public funding providers

Institutional funding of RDI by selected public funding providers between 2011 and 2020 (millions of CZK)

Source: State budgets of the Czech Republic for the given years

The Reform of the Research, Development and Innovation System, which was approved by the government (Government Resolution No. 287 of 26 March 2008), fundamentally changed the way institutional funding was provided. Still running large research projects (referred to as “research plans”) were to be completed as planned, but no calls for new ones were to be announced. A new basis for granting institutional funding was chosen: the evaluation of research organisations according to government-approved methodology or, in the case of the Academy of Sciences of the Czech Republic, self-evaluation. Today, the Research and Development Council draws on the outcomes of this evaluation for drafting the state budget for RDI. (In the 2013–2015 period, the Council followed the principle of 20% allocation on the basis of evaluation scores, and 80% allocation on the basis of the previous year’s allocation. However, its RDI budget drafts were not approved in those years. Between 2016 and 2018, the R&DC’s draft built mainly on approved medium-term projections and on the outcomes of budget negotiations with individual public funding providers.)

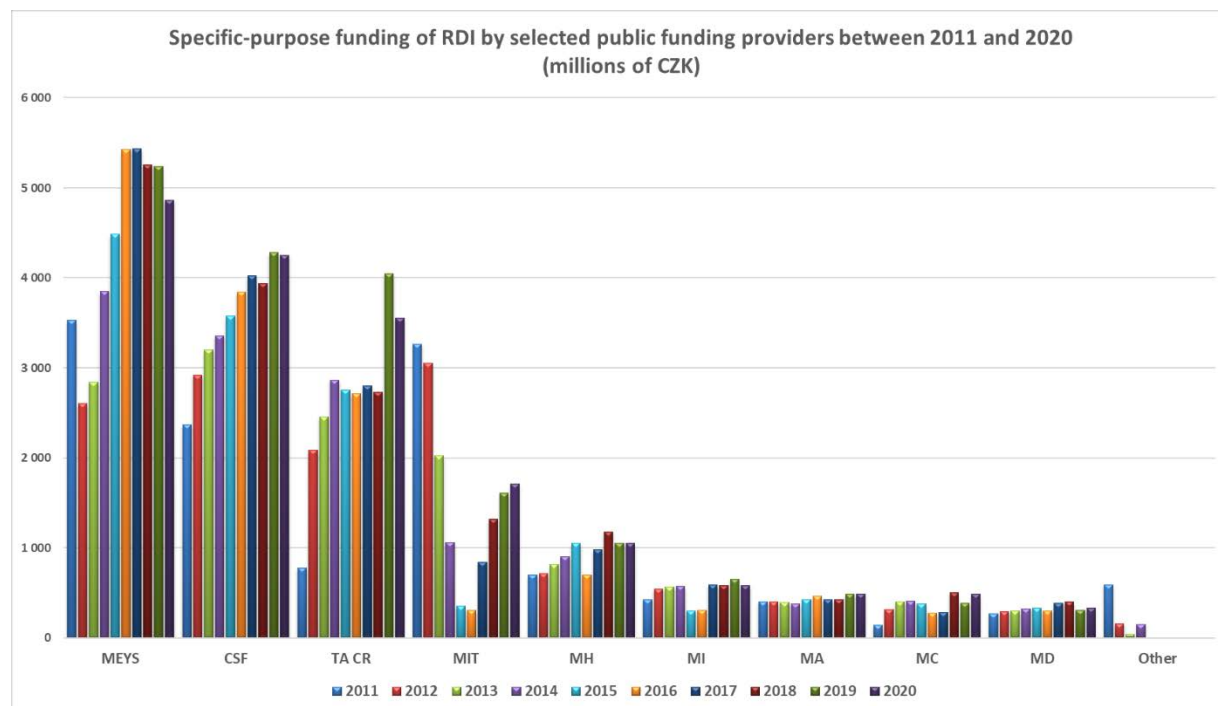

As mentioned above, institutional support is also provided for matching the funding of operational programmes in RDI. Finally, institutional funding meets the costs of public tenders, evaluation procedures, and financial awards for extraordinary achievements.

The lion's share of institutional funding is distributed by the Ministry of Education of the Czech Republic (MEYS) and the Academy of Sciences of the Czech Republic (AS CR). MEYS provides institutional funding to higher education institutions and to some research organisations. It also co-funds operational programmes in RDI AS CR provides institutional funding to its institutes. Therefore, the expenditures are not directly comparable.

Since 2017, the public providers of institutional funding are four ministries again (Ministry of Environment, Ministry of Transport, Ministry of Labour and Social Affairs and Ministry of Foreign Affairs). The Ministry of the Environment is the largest public funding provider and is listed separately in the chart. The remaining three of these new public funding providers are listed in the “Others” category, together with three others: the Ministry of Defence, Ministry of Culture and Ministry of the Interior. In 2020, they will distribute funding in the aggregate amount of CZK 868 million.

2.6 Specific-purpose funding of research, development and innovation by selected public funding providers

Specific-purpose funding of RDI by selected public funding providers between 2011 and 2020 (millions of CZK)

Source: State budgets of the Czech Republic for the given years

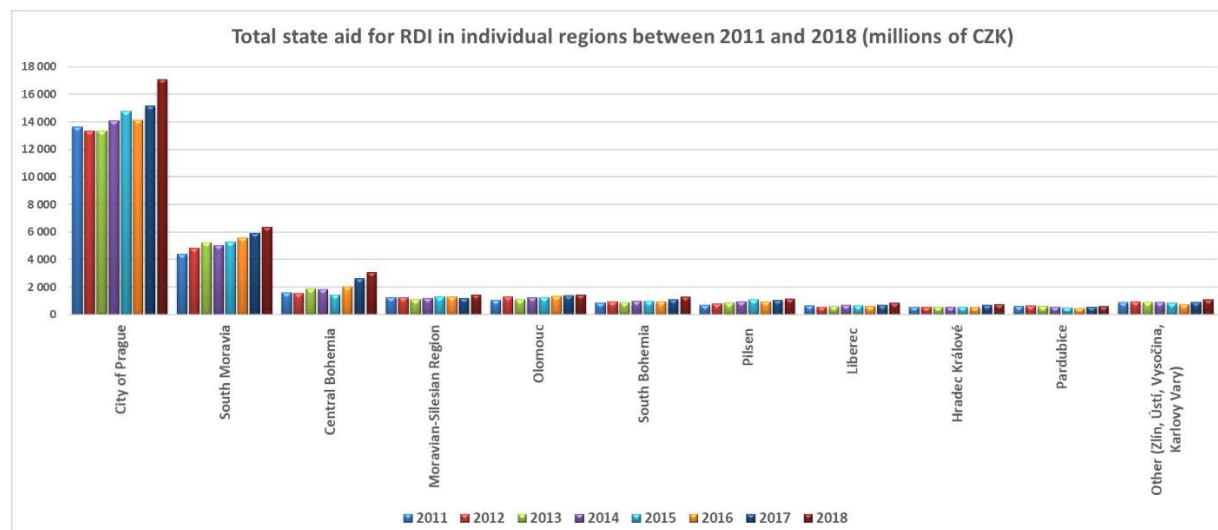

Specific-purpose funding for R&D is awarded for R&D projects upon public tenders. The Czech Science Foundation (CSF) provides funding for open-grant projects in basic research. Other public funding providers, including the Technological Agency of the Czech Republic (TA CR), support programme projects under their R&D programmes. The Ministry of Defence, Ministry of the Interior and the TA CR also award public contracts in R&D.

The increase in the Czech Science Foundation's expenditures (CSF) after 2010— seen in the above graph — resulted from a change in the rules of support: since 2011, CSF has also been funding wage costs of new projects. TA CR expenditures began to rise after it had taken over responsibility for several R&D areas previously administered by other budget agencies which ceased to provide specific-purpose funding for RDI.

The increase in the amount of funding under the state budget heading of the Ministry of Education (MEYS) after 2015 was due to the launch of the National Sustainability Programme I (NSP I), and the National Sustainability Programme II (NSP II). These programmes are intended to foster development and sustainability of new European research centres established under RDIOP and PCOP programmes. The first projects have already been completed, which means that funding from this budget heading will be decreasing. As of 2016, substantial funds are available for individual projects of large infrastructures.

2.7 Total state aid for research, development and innovation in regions

Total state aid for RDI in individual regions between 2011 and 2018 (millions of CZK)

Source: CSO

The above figures for the total state funding of R&D include all specific-purpose funding that was provided in the relevant years. Of the other type of public funding, the institutional funding, only that for the former large research projects (referred to as “research plans”), and for the development of research organisations, has been included here. The funding of specific academic research and selected international cooperation activities in R&D was excluded.

In geographic terms, public funding is distributed rather unevenly across the territory of the Czech Republic, as in many other countries. This reflects the historical distribution of R&D facilities across the country. The capital city of Prague absorbs around 50% of the total public funding of R&D. Of the total fourteen regions, a mere four regions, including Prague, receive almost 80 % of the total funding. Establishment of new R&D infrastructures outside Prague was expected to mitigate these differences. This effort was funded by the EU under the Research and Development for Innovation Operational Programme. Yet, these steps have not altered the regional distribution of aid in any significant manner. This aid from operational programmes is only reported in the amounts provided from the Czech state budget – “co-funding”. As the amounts for the Zlín, Ústí, Vysočina and Karlovy Vary Regions were very low, they were added together and shown as a single item.

3 RDI PUBLIC FUNDING PROVIDERS AND PROGRAMMES IN THE CZECH REPUBLIC

3.1 Czech Science Foundation (CSF)

The Czech Science Foundation began its operations in 1993. One of its tasks is to award grants to the best basic research projects from all fields of science on the basis of annual public tenders in research where the objectives and project implementation methods are proposed by scientists themselves.. The projects lead to new knowledge of the underlying foundations of phenomena and observable facts which are published in a way that is customary in the discipline. Every year and for each project, the CSF reviews the progress and compliance with the objectives of the project. Finally, it evaluates the results of each completed project. The CSF acts as a budget agency, which means that it awards grants, i.e. specific-purpose funding for basic research projects, from a separate heading of the state budget.

Every year, about 3,000 proposers apply for funding from the CSF, of whom approximately one quarter succeed but the success rate varies from year to year.

CSF allocates funds for standard projects, JUNIOR STAR projects, EXPRO and international projects. In 2014, international “LA Grants” began to be awarded. From 2017, projects which support international collaboration for obtaining ERC grants will be supported. The first public tender for EXPRO projects for excellence in basic research was announced 2018. JUNIOR STAR, a new programme, has been launched in 2020.

The activities of the CSF are as follows:

- Prepares and conducts public tenders in research through which grants are awarded.
- Its expert consulting bodies evaluate project proposals, and select the best ones to receive funding.
- Awards grants within current financial limits, i.e. based on the allocation from the state budget, and makes contracts with applicant entities.
- Monitors the project progress and fulfilment of objectives through annual interim project reports.
- Evaluates the results achieved by the project, based on its final report.
- Reviews the project team's management of project funds, i.e. the purpose of expenses, and compliance with relevant regulations and requirements.
- Cooperates with foreign scientific bodies and institutions, in particular from the Member States of the European Community.

Types of open-grant projects:

The CSF provides specific-purpose funding for the following types of open-grant projects:

- Standard grant projects (GA)
- International (bilateral) projects (GC)
- Junior grants (GJ)
- LA grants (GF)
- Projects which support international collaboration for obtaining ERC grants (GH)
- EXPRO grants for excellence in basic research (GX)
- JUNIOR STAR (GM)

Czech Science Foundation supports scientific projects across all disciplines of basic research. The disciplines are assigned to 39 review panels. For EXPRO projects, there are 8 subject committees as set out in the Czech Science Foundation Statute. The structure of the review panels and committees is outlined in the section “About Czech Science Foundation – Advisory Bodies” (Subject Committees and Review Panels).

The proposer chooses the review panel or subject committee to discuss the project. Hence, in the public tender, the project proposal will be reviewed by the panel or committee chosen by the proposer. You can find more information at <https://gacr.cz/zakladni-informace/>

3.1.1 Standard grant projects (GA)

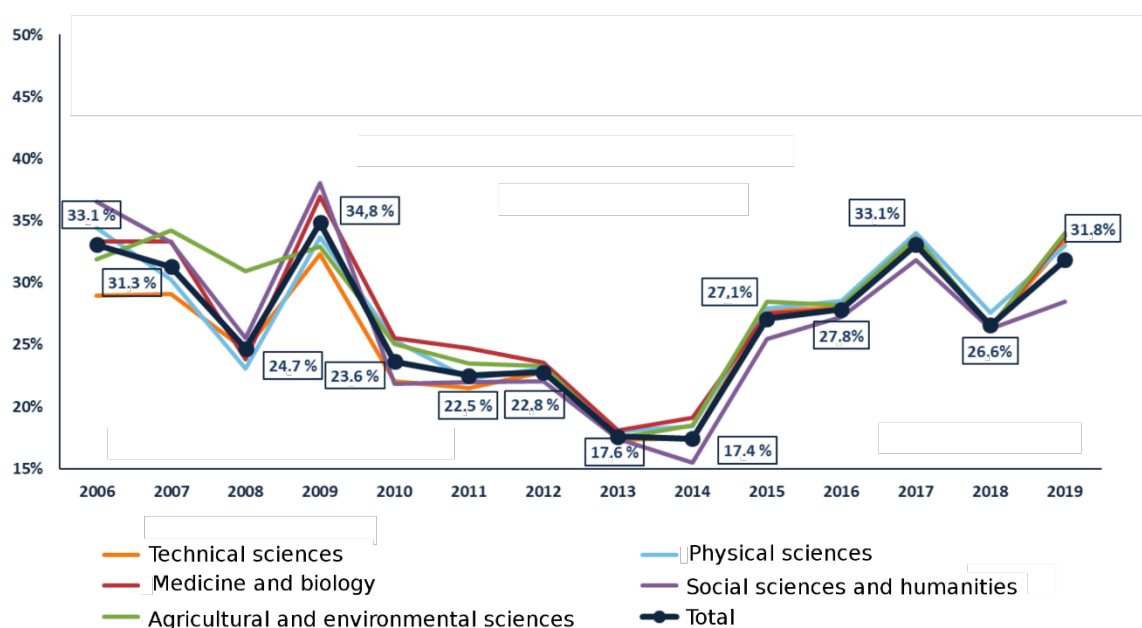

Standard grant projects are basic research projects. The CSF has supported such projects since its establishment in 1993.

According to information from the RD&I IS, support has been provided (until March 2020) for 15,246 projects.

- The typical project duration is 3 years.
- The projects can focus on any field of basic research.
- The project topic is chosen by the proposer.
- Eligible applicant entities include all legal and natural persons, organisational units of the state or regional self-governments, or those organisational units of the Ministry of Defence and Ministry of the Interior which are engaged in research and experimental development.
- Calls are typically announced once a year, normally in March. Evaluations are completed in the autumn and the results are announced before the end of the calendar year.
- The investigator can be either one person or an entire research team, whose members may even come from various institutions
- The main criteria considered for awarding the grant are the proposed objectives, the method of investigation, the planned outcomes, the applicant entity's foreign cooperation and earlier collaboration with CSF, and commensurate funding requirements.

Success rate of standard projects and start dates

2006 - 2019

Source: <https://gacr.cz/wp-content/uploads/2019/04/GRAFY-NA-WEB-2019.pdf>

In 2020, a call for proposals under this programme will be announced

3.1.2 International (bilateral) projects (GC)

International open-grants are awarded for basic research projects carried out in bilateral cooperation between scientists or research teams. The projects are selected in collaboration with various foreign funding providers:

- Deutsche Forschungsgemeinschaft (DFG), Germany
- National Research Foundation of Korea (NRF), Korea
- Ministry of Science and Technology (MOST), Taiwan
- São Paulo Research Foundation (FAPESP)
- Russian Foundation for Basic Research (RFBR)

According to information from the RD&I IS, support has been provided (until March 2020) for 195 projects.

The CSF can only award a bilateral project grant if the foreign provider awards the funding as well, i.e. the proposal must be accepted by both national providers.

- The projects can focus on any field of basic research.
- The project topic is chosen by the proposer.
- The project duration is 2–3 years
- In the Czech Republic, these public tenders are typically announced once a year, normally in March. The evaluation is completed in autumn and the date on which the results are announced in the Czech Republic depends on the date of award in the partner country.
- Each national provider only funds the project activities on its territory.

In 2020, a call for proposals under this programme will be announced

3.1.3 Junior grants (GJ)

Junior grants offer opportunities for excellent young scientists to build their independent teams with advanced instruments. Their goal is to enliven the structure of basic research in the Czech Republic. The first public tender was announced in 2014 and the last one in 2019.

According to information from the RD&I IS, support has been provided (until March 2020) for 409 projects.

In a single junior grant competition, each applicant could only submit one proposal. If this proposal was awarded funding, the applicant was not be allowed to apply for a junior grant again. Proposals were also accepted from those who were already conducting another standard grant project, an international project or a post-doctoral grant project with funding from the CSF. In the year of the proposal submission, the applicant and the project team members had to be under 35 years of age and, if having a PhD or an equivalent degree, they must have had received it within the previous 8 years.

The aid rate was up to 100 %. The maximum amount of aid for a single project is defined by the Framework (i.e. EUR 20 million) but tended to be approximately two orders of magnitude lower for projects of this type.

3.1.4 JUNIOR STAR (GM)

JUNIOR STAR grants aim to support excellence in basic research and provide early-stage scientists with an opportunity to achieve independence and build a team, obtain modern instruments and develop independent agenda at the highest international level to enliven the structure of basic research in the Czech Republic. Scientists with original thinking will thus be able to realize their goals at an early stage of their career. The public tender was announced in 2020.

- The project period 5 years.
- These projects can focus on any field of basic research.

- The project topic is chosen by the proposer. Only one applicant entity may be listed in the proposal.
- The proposer, i.e. the head of the investigation team, must have had received PhD or an equivalent degree within 8 years preceding 30 September of the year the public tender was announced. Only those working in basic research are eligible.
- The proposer should have significant experience in international research, have authored publications in renowned international journals or demonstrate an equivalent achievement of excellence.
- The aid rate may be up to 100%. The highest amount of aid for a single project is CZK 25 million.

3.1.5 LA grants (GF)

International grants known as LA grants are provided by Czech Science Foundation. Evaluation of the proposals is based on the Lead Agency principle. The grants support international cooperation in basic research.

According to information from the RD&I IS, support has been provided (until March 2020) for 48 projects.

Principles:

- The project period should be no longer than three years.
- Projects should lead to justified collaboration between teams from the Czech Republic and Austria.
- All scientific and basic research disciplines are eligible.
- Scientific teams are funded by their national agencies.
- The budgets reflect the principles of bilateral cooperation (neither side is restricted in any way but the spend must be justified).
- Project proposals are submitted to only one agency (the “lead agency” principle).
- Public tenders of this type are announced once a year, usually in November.

LA grants started in 2015 and their support will end in 2022. In the final two years, no new projects will be launched, and those running will be finished as planned. The project duration in this scheme was set at 24–36 months as being the optimum period for achieving their objectives.

In 2019, the CEUS agreement was signed. This new partnership will enable researchers from the Czech Republic, Austria, Poland and Slovenia to conduct research projects in collaboration with new foreign partners. In the framework of CEUS, an initiative promoting basic research in Central Europe, researchers will now be able to propose bilateral and trilateral projects under the Lead Agency principle. The programme may be updated or a new programme may be launched to reflect these changes.

The aid intensity can be up to 100%. The maximum amount of aid for a single project is defined by the Framework (i.e. EUR 20 million) but tends to be more than three orders of magnitude lower for projects of this type.

3.1.6 Projects which support international collaboration for obtaining ERC grants (GH)

This is a separate type of projects which support applicants for ERC grants. The aim is to help scientists acquire experience and succeed in obtaining funding from the schemes of the European Union, and to promote excellence in basic research in the Czech Republic.

The CSF has been supporting these projects since 2016. The project duration is 3–6 months. These projects can focus on any field of basic research. The project topic is chosen by the proposer. Only one applicant entity may be listed in the proposal.

To be eligible to submit an open-grant project application under “Support of ERC Grant Applicants”, the responsible applicant employee shall be an investigator of a running Junior Grant project which

has passed at least one evaluation, or an investigator of a completed Junior Grant project whose last evaluation rating prior to the submission of the "Support of ERC Grant Applicants" application was either "fulfilled" or "excellent".

The call for proposals of projects which support international collaboration for obtaining ERC grants in basic research is announced upon consultation with the European Research Council (ERC). Funding for these open-grant projects is to be provided upon the call for proposals and until 2022.

The Support of ERC Grant Applicants project will be conducted in a foreign facility. The evaluation will take place at an international level. Key evaluation criteria include scientific excellence, innovation, originality, prior scientific and publication activity of the responsible applicant employee, and his or her professional qualification for submitting a project application to one of the main ERC funding schemes (StG, CoG, AdG) with the host institution in the Czech Republic within the prescribed time limit upon completion of this open-grant project.

3.1.7 EXPRO grants for excellence in basic research (GX)

These new grants aim to support research teams led by prominent internationally-recognised scientists or by young researchers who demonstrate a clear potential for excellence. This funding should go towards areas of excellence, or those with a potential for excellence, and ultimately boost the quality of Czech science. Excellent research depends on top scientists and is often associated with high risk-high gain projects, such as ERC projects. No support for such projects has been available in the Czech Republic so far, leading to low success rates in obtaining ERC grants.

According to information from the RD&I IS, support has been provided (until March 2020) for 45 projects.

Applications will be evaluated with the emphasis on the proposer's excellence, publications and other criteria. The projects should take five years and their staff's FTE should be no less than 0.5. The grants are expected to reach up to CZK 10 million/year, i.e. much more than in standard projects. For an EXPRO project to be completed successfully, either the investigator or one of the team members must submit an application for an ERC grant within six years of the project start date.

In 2020, a call for proposals under this programme will be announced.

3.1.8 Public tenders

Programme code	Tender end date
GA	07/04/2020
GC	
GM	
GX	
GH	To be announced after consultation with the European Research Council (ERC)

3.2 Technology Agency of the Czech Republic (TA CR)

The Technology Agency of the Czech Republic is an organisational unit of the state, established in 2009 by Act No. 130/2002 Sb., which commenced its activities in 2010. TA CR provides state aid for applied research and development, which had previously been fragmented and administered by a large number of public funding providers.

The TA CR fulfils the following tasks:

- Designs and implements applied research, development and innovation programmes, including those designed to meet the needs of the state administration, conducts public tenders in research, and awards public contracts
- Evaluates and selects project proposals in thematic programmes
- Provides specific-purpose funding for programme projects through grant agreements and grant award decisions
- Monitors the performance of grant agreements and compliance with grant award decisions, and audits the use of specific-purpose funding
- Evaluates and audits programme projects, their objectives, and the results produced
- Fosters cooperation between research organisations and the private sector, and co-funds programme projects

In TA CR programmes, the amount of funding available for individual public tenders varies substantially between the initially approved programme version, the medium-term projection for the state budget and the actual public tender. There might be some variation in the conditions as well (e.g. in the aid intensity). The version relevant to applicant entities is always the tender dossier for the public tender.

Since 2019, Technology Agency of the Czech Republic runs R&D programmes for other ministries as well. As a result, they do not provide specific-purpose support but take part in developing relevant programmes and delivering R&D goals in their remit. They are the Ministry of the Environment, Ministry of Transport and Ministry of Industry and Trade.

Besides the following programmes, TA CR also administers international cooperation programmes listed in section 6.5.

3.2.1 EPSILON (TH)

The full name of the programme is **TH - Programme of applied research and experimental development EPSILON 2015-2025**. The objective of the EPSILON programme is to support projects which deliver results with a significant potential for being rapidly applied in real-world products, manufacturing routes, and services. The programme aims to fulfil the National Priorities of Oriented Research, Experimental Development and Innovation (RDI Priorities) by supporting projects that meet the research objectives of their areas and sub-areas. Its projects should therefore be aligned to the research objectives set out in the RDI Priorities and not to sector fields. They should be focused predominantly on new technologies and materials to be used in power generation, environment and transport.

According to information from the RD&I IS, support has been provided (until March 2020) for 664 projects.

The programme comprises 3 sub-programmes:

- Sub-programme 1 – Knowledge economy
- Sub-programme 2 – Power generation and materials
- Sub-programme 3 – Environment

The first public tender was announced in 2014 and the funding was released in 2015. For the second tender which was announced in 2016, funding is to be released in 2017. The third public tender was announced in 2017. Another public tender was announced on 28 February 2018. The duration of this programme was determined by the need to evaluate all projects after their completion and

implementation of their results. No government funding was therefore requested for the 2023–2025 period. The latest public tender was announced on 4 February 2019. It was open exclusively to those Czech entities which succeeded in the joint international M-ERA.Net 2 Call 2018. No further calls are likely to be announced.

3.2.2 BETA2 (TI)

The full name of the programme is **BETA2 programme of public contracts in applied research and innovation for state administration - 2017 - 2021**. The programme aims to support the development of new or the improvement of existing procedures, regulatory mechanisms, supervisory activities, skills, services, information and control products and procedures for higher efficiency and effectiveness in the performance of state administration.

According to information from the RD&I IS, support has been provided (until March 2020) for 111 projects.

The programme mainly supports the construction and innovation of various models, and formulation of amendments to existing legislation and government policy strategies in both national and European contexts (e.g. economic or social policies). Its outputs should include new methods for evaluating the effectiveness of such policies and strategies, and background documents for shaping future policies, improving the performance of state administration, and for effective allocation of public resources. Extension of the programme until 2024 is being discussed.

The research and development themes under this programme are classified according to the needs of various state administration bodies. These needs should reflect the relevant priorities, e.g. those set forth in strategic and conceptual documents. The goals of each project will be clearly defined in its tender dossier.

Since 2017, the Technology Agency of the Czech Republic (TA CR) has been administering projects that answer the needs of the following state administration bodies (referred to as “expert guarantors”):

- Ministry of Transport (including the Civil Aviation Authority)
- Ministry of Labour and Social Affairs
- Ministry of Regional Development
- Ministry of the Interior
- Ministry of Foreign Affairs
- Ministry of Industry and Trade
- Ministry of the Environment
- Czech Mining Authority
- Czech Statistical Office
- Czech Office for Surveying, Mapping and Cadastre
- Energy Regulatory Office
- Administration of State Material Reserves
- State Office for Nuclear Safety
- Office of the Government of the Czech Republic
- Other central state administration bodies and other providers of specific-purpose funding pursuant to section 4 of the Support of Research and Development Act.

3.2.3 ZETA (TJ)

The full name of the programme is **ZETA Programme of applied research 2017 – 2025**. The goals of the programme are to involve students and young researchers in research and development aimed at real-world applications, stimulate their interest in projects with concrete and practical outcomes, and promote such projects in academia while strengthening their links to business.

According to information from the RD&I IS, support has been provided (until March 2020) for 239 projects.

Its sub-objective is to promote equal opportunities for young female and male researchers in applied research projects.

Amount of funding planned for the entire programme period (according to current conditions of the programme)

Period	2017	2018	2019	2020	2021	2022	2023	Total
Amount of aid (CZK)	60 mil.	120 mil.	120 mil.	120 mil..	120 mil.	120 mil.	120 mil.	720 mil.

Project period

The programme is planned for 9 years from 2017 to 2025.

The minimum and maximum project periods under this programme are 12 months and 24 months, respectively.

Form and amount of funding

The aid intensity defined as a percentage of approved project costs shall be calculated separately for each project, each beneficiary, and each additional participant according to the GBER and shall be no higher than the limit set forth in the GBER.

The maximum allowed aid intensity in a single project is 85% of the approved costs.

In accordance with the GBER, special bonuses may be awarded for meeting the conditions of effective collaboration stipulated in Article 25, section 6 (b) (i). Applicant entities are required to provide co-funding.

The maximum funding for a single project is CZK 5 million.

Maximum aid intensities for industrial research and experimental development and for individual categories of participants are given in the following table.

Participant	Industrial research		Experimental development	
	Maximum allowed aid intensity reflecting the premium for small and medium-sized enterprises	Maximum allowed aid intensity subject to demonstrated effective collaboration with a research organisation	Maximum allowed aid intensity reflecting the premium for small and medium-sized enterprises	Maximum allowed aid intensity subject to demonstrated effective collaboration with a research organisation
Small enterprises*	70%	80%	45%	60%
Medium-sized enterprises*	60%	75%	35%	50%
Large enterprises	50%	65%	25%	40%
Research** organisations	100% ¹⁾	100% ¹⁾	100% ¹⁾	100% ¹⁾

* Note: Small and medium-sized enterprises are defined in Annex 1 to the GBER.

** This aid intensity applies to other than economic activities of research organisations.

Aid beneficiaries

Under the Support of Research and Development Act and the GBER, the project aid beneficiaries may include the following:

- **Research and knowledge dissemination organisations (“research organisations”)** – entities which, according to Article 2, section 83 of the GBER, meet the definition of a research organisation, carry out the project alone or in cooperation with other participants, and prove their ability to co-fund the project from non-public resources or, in exceptional and justified cases defined in the public tender dossier, also from other public resources.
- **Undertakings** – legal entities and natural persons which, according to Annex 1 to the GBER, conduct economic activities, carry out the project alone or in cooperation with other participants, and prove their ability to co-fund the project from non-public resources.

The first public tender was announced in 2017 and funding will be released in 2018. Further public tenders are to be announced on an annual basis, including this year, until 2021. Their respective funding was and will continue to be provided from 2018 to 2022.

3.2.4 ZETA (TJ)

The full name of the programme is **ETA programme for applied research, experimental development and innovation in social sciences and humanities 2018 – 2023**. The programme strengthens the role of the social sciences and humanities in applied research projects, experimental development and innovation for the benefit of the quality of human life and in response to dynamic social, economic, globalisation-related, cultural and technological transformations.

According to information from the RD&I IS, support has been provided (until March 2020) for 230 projects.

The programme supports projects that focus on one or more of the following aspects:

- benefits of the multidisciplinary approach,
- integration of technical and non-technical research,
- realization of the application potential of basic research.

The aim of the programme is to strengthen the role of social sciences and humanities in applied research, experimental development and innovation in order to obtain new or substantially improved products, procedures, processes or services in the following areas:

- people and society in the context of the dynamic societal and technological transformations and challenges in the 21st century;
- people and environment for their life in the context of sustainable development of the land, regions, cities, municipalities and building culture;
- people and the economy in the context of the emergence of new competitive advantages and development of competences for the 21st century;
- people and the social system in the context of interaction between citizens and the state, public policies, administration and citizen-oriented public services.

Amount of funding from the state budget planned for the entire programme period (according to current conditions of the programme)

Period	2018	2019	2020	2021	2022	2023	Total
Amount of aid (CZK)	270 mil.	357 mil.	472.5mil.	475 mil.	475 mil.	350 mil.	2,400 mil.

Project period

The minimum project period under this programme is 12 months. The expected maximum project duration is three years. The period of research, development and innovation projects must not extend beyond the period of the entire programme.

Form and amount of funding

The aid intensity defined as a percentage of approved project costs shall be calculated separately for each project, each beneficiary and each additional participant. Where funding is granted to enterprises pursuant to the GBER, the maximum aid intensities defined therein shall apply.

In accordance with the GBER, a bonus may be awarded beyond the general aid intensity to relevant participants who have met the conditions for effective collaboration. Within the definition of the GBER and the Framework, effective collaboration shall mean collaboration of no fewer than two independent parties to exchange knowledge or technology, or to achieve a common objective based on the division of labour where the parties jointly define the scope of the collaborative project and share its risks and outputs. The project costs may be borne in full by one or more parties. Collaboration is understood not

to include contract research and provision of research services. The maximum aid intensities for industrial research, experimental development and innovation for individual categories of participants are given in the following table:

	Small enterprise	Medium-sized enterprise	Large enterprise	RO
Industrial research	70%	60%	50%	100%
Industrial research under conditions of effective collaboration	80%	75%	65%	100%
Experimental development	45%	35%	25%	100%
Experimental development under conditions of effective collaboration	60%	50%	40%	100%
Innovation for small and medium-sized enterprises	50%	50%	0%	0%
Innovation in procedures and organisation	50%	50%	15%	100%

Aid beneficiaries

Under the Support of Research and Development Act, the Framework and the GBER, the applicant entities for project aid may include the following:

- **Research and knowledge dissemination organisations** – any entities which, according to Article 2, section 83 of the GBER and the Support of Research and Development Act, meet the definition of a research organisation (“research organisations”).
- **Undertakings** – any entities which meet the conditions set out in Article 2, sections 2 and 24 of the GBER. Undertakings which carry out the project alone or in cooperation with other participants shall be required to prove their ability to co-fund the project from non-public resources.

The first public tender was announced in 2017 and funding was released in 2018. Further public tenders are announced on an annual basis throughout the 2018–2021 period. Their funding begins between 2019 and 2022.

3.2.5 THETA (TJ)

The full name of the programme is **The new THETA programme of applied research, experimental development and innovation in the power industry 2018 – 2025**. The programme focus reflects the updated State Energy Policy of the Czech Republic which was adopted by the Government of the Czech Republic in May 2015. The Policy sets forth the need for supporting research and development projects for the power industry in response to adopted strategy documents, the European Strategic Energy Technology Plan and in the context of the priority area Sustainable Power Industry. **According to information from the RD&I IS, support has been provided (until March 2020) for 114 projects.**

Through the outcomes and impacts of its projects, the programme aims to help fulfil the vision of transformation and modernisation of the power sector in the medium and long-term in accordance with the adopted strategy documents. To accomplish this, the support for research, development and innovation in the power industry will focus on:

- projects in the public interest;
- new technologies and system components with high potential for rapid adoption;
- long-term technology visions.

Amount of funding from the state budget planned for the entire programme period (according to current conditions of the programme)

Period	2018	2019	2020	2021	2022	2023	2024	2025	Total
Amount of aid (CZK)	200 mil.	360 mil.	580 mil.	640 mil.	640 mil.	640 mil.	600 mil.	340 mil.	4,000 mil.

Project period

The maximum project period under this programme is 8 years. On average, the expected project duration is 36 months. The project period must not extend beyond the period of the entire programme.

Form and amount of funding

The expected average aid intensity over the programme period is 70%. In sub-programmes 1 and 3, the maximum allowed aid intensity in a single project is 100% of the approved costs. In sub-programme 2, it is 80%. The aid intensity defined as a percentage of approved project costs shall be calculated separately for each project, each beneficiary and each additional participant. Where funding is granted to enterprises pursuant to the GBER, the maximum aid intensities defined therein shall apply.

	Small enterprise	Medium-sized enterprise	Large enterprise	RO
Industrial research	70%	60%	50%	100%
Industrial research under conditions of effective collaboration	80%	75%	65%	100%
Experimental development	45%	35%	25%	100%
Experimental development under conditions of effective collaboration	60%	50%	40%	100%
Innovation for small and medium-sized enterprises	50%	50%	0%	0%
Innovation in procedures and organisation	50%	50%	15%	100%

Aid beneficiaries

Under the Support of Research and Development Act, the Framework and the GBER, the applicant entities and project aid beneficiaries in all sub-programmes may include the following:

- **Undertakings** – legal entities, regardless of their legal form, and natural persons which (according to Annex 1 to the GBER) conduct economic activities, carry out the project alone or in cooperation with other participants, and prove their ability to co-fund the project from non-public resources.
- **Research and knowledge dissemination organisations** (“research organisations”) – legal entities which meet the definition of a research organisation according to Article 2, section 83 of the GBER and the Support of Research and Development Act and which carry out the project alone or in cooperation with other participants.

Other eligible applicant entities relevant only to sub-programmes 1 and 3: Other natural persons and legal entities governed by public or private law, regardless of their legal form or method of funding which conduct activities eligible for funding outside public support schemes, i.e. entities other than undertakings. Under this programme, funding shall only be granted to those applicant entities which fulfil the qualification criteria set out in section 18 of Act No. 130/2002 Sb. If a project proposal is submitted by multiple applicant entities, each of them shall be required to prove their qualification. The applicant entity shall prove their qualification pursuant to the Support of Research and Development Act and as defined by the funding provider in the tender dossier.

The first public tender was announced in 2017 and funding will be released in 2018. Further public tenders are announced on an annual basis between 2018 and 2023.

3.2.6 National Centres of Competence 1 (TN)

The programme promotes long-term cooperation between the research base and industry, and aims to strengthen institutions involved in applied research. To guarantee long-term stability, it will be followed by the National Centres of Competence 2 programme in 2020–2026. It also aims to establish synergistic links between successful centres built with support from the TA CR (the Centres of Competence), the CSF (the Centres of Excellence), and operational programmes (predominantly the RDI Centres) and other research centres and units, to build an integrated system. It will help to strengthen applied research organisations and motivate the relevant research facilities to transform into research and technology centres which can conduct high-quality applied research to meet the needs of industry. One of its purposes is to deliver synergistic and complementary effects in international schemes, such as H2020 and other EU programmes, and in international programmes with compatible orientations.

According to information from the RD&I IS, support has been provided (until March 2020) for 13 projects.

This programme aims to increase the efficiency and quality of the results of applied research and technology transfer in key areas with a growth potential, to increase the competitiveness of undertakings, and to strengthen the excellence and industrial relevance of research organisations. To achieve this, a stable and robust applied research base must be built (national centres of competence) by concentrating research capacities and focusing on industrial application of their research.

The programme was planned for the five-year period from 2018 to 2022, but its extension until 2026 was approved in 2019

Amount of funding from the state budget planned for the entire programme period (according to current conditions of the programme)

Period	2018	2019	2020	2021	2022	2023	2024	2025	2026	Total
Amount of aid (CZK)	100 mil.	230 mil.	700 mil.	894 mil.	972 mil.	1,072 mil.	1,072 mil.	1,072 mil.	1,072 mil.	7,184 mil.

Project period

The maximum project period under this programme is 5 or years. The first public tender focused on projects planned for a period ending in 2020, with possible extension by two years, i.e. until 2022. The second public tender is planned for early 2020. Funding is to be released in 2021 for projects of up to six years. The project period must not extend beyond the period of the entire programme.

Form and amount of funding

The expected average aid intensity over the programme period is 80%. The maximum available aid intensity is 90%. The aid intensity defined as a percentage of approved project costs will be calculated separately for each project, each recipient, and each additional participant. Securing a significant portion of funding from other sources (non-public sources, EU programmes and others) is expected to be a mandatory condition for providing the aid. This condition will be specified in the tender dossier.

Aid beneficiaries

Under the Support of Research and Development Act, the Framework and the GBER, the applicant entities for project aid, and beneficiaries, may include the following:

- **Research and knowledge dissemination organisations** (“research organisations”) – legal entities which meet the definition of , a research organisation according to Article 2, section 83 of the GBER and the Support of Research and Development Act and which carry out the project in cooperation with other participants. Where the research organisation conducts not

only non-economic activity but also economic activities, it shall account for the costs and revenues from these economic activities separately.

- **Other legal entities** governed by public or private law, regardless of their legal form or method of funding which conduct other than economic activities, i.e. entities other than undertakings.
- **Undertakings** legal entities, regardless of their legal form, and natural persons which (according to Annex 1 to the GBER) conduct economic activities, carry out the project in cooperation with other participants, and prove their ability to co-fund the project from non-public resources.

A public tender was announced in 2018 and its funding was released in the same year. Based on the evaluation of the first public tender, subsequent public tenders should be announced. The first public tender focused on projects planned for a period ending in 2020, with possible extension by two years, i.e. until 2022.

Technology Agency of the Czech Republic informed of preparations for 2nd public tender under the programme to support applied research, experimental development and innovation National Centres of Competence which is to be announced on 29 May 2020.

- The period for submission of project proposals is 30 April 2020 – 24. June 2020.
- CZK 3 billion has been allocated.
- The maximum total aid per project: CZK 400 million
- Maximum aid intensity per project: 80 %
- Applicants – Undertakings, research organisations

3.2.7 DELTA 2 (TM)

The full name of the programme is **DELTA 2 Programme of applied research, experimental development and innovation 2020 - 2025**. The DELTA 2 programme supports collaboration in applied research (including industrial research, experimental development and their combinations) through joint projects conducted by Czech businesses and research organisations supported from the Technology Agency of the Czech Republic and by foreign partners supported (possibly) from foreign technology and innovation agencies or equivalent institutions. Eligible projects are those which focus on specific output from applied research, i.e. those which generate new findings and skills for developing new or substantially upgrading existing products, processes or services or which directly lead to new products, processes or services. These projects must respond to current or future needs of the given country.

The interaction between the Technology Agency of the Czech Republic and partner agencies will depend on their agreement regarding the methods of support, proof of qualification or other means of screening the foreign partners and Czech participants. The relevant conditions will be agreed between the public funding provider and the partner agency and announced as part of the public tender.

The programme has no specific theme: ad hoc topics may be defined for joint projects in individual public tenders. For each partner agency, the choice of research themes will be identified individually to reflect the priorities of applied research in the countries involved.

The programme aims to ensure that public funding of applied research translates into economic or other societal benefits. The knowledge acquired will contribute to identification of the factors and processes which affect and determine the functioning and development of Czech society in the context of today's European integration and globalization. The programme is expected to attract industrial research projects (with some necessary activities of oriented basic research) and projects predominantly involving experimental development.

Amount of state aid planned for the entire programme period (according to current conditions of the programme)

Period	2020	2021	2022	2023	2024	2025	Total
Amount of aid (CZK)	150 mil.	250 mil.	250 mil.	275 mil.	200 mil.	100 mil.	1,225 mil.

Project period

The expected maximum project duration is 36 months. The project period must not extend beyond the period of the entire programme.

Form and amount of funding

The expected average aid intensity over the programme period is 74%. The aid intensity defined as a percentage of approved project costs shall be calculated separately for each project, each beneficiary and each additional participant. Where funding is granted to enterprises pursuant to the GBER, the maximum aid intensities defined therein shall apply. The planned maximum funding for a single project with participants from the Czech Republic is CZK 25m.

<i>Table of maximum aid intensities for industrial research, experimental development and innovation for individual categories of participants</i>	Small enterprise	Medium-sized enterprise	Large enterprise	RO
Activity category				
Industrial research	70%	60%	50%	100%
Industrial research under conditions of effective collaboration	80%	75%	65%	100%
Experimental development	45%	35%	25%	100%
Experimental development under conditions of effective collaboration	60%	50%	40%	100%
Innovation for small and medium-sized enterprises	50%	50%	0%	0%
Innovation in procedures and organisation	50%	50%	15%	100%

Aid beneficiaries

In accordance with the Support of Research and Development Act No. 130/2002 Sb., the Framework, and the GBER, eligible project aid beneficiaries include:

- **Undertakings** – legal entities, regardless of their legal form, and natural persons which (according to Annex 1 to the GBER) conduct economic activities, carry out the project alone or in cooperation with other participants, and prove their ability to co-fund the project from non-public resources.
- **Research and knowledge dissemination organisations** (“research organisations”) – legal entities which meet the definition of a research organisation according to Article 2, section 83 of the GBER and the Support of Research and Development Act and which carry out the project alone or in cooperation with other participants. Research organisations may apply for and receive aid alone in exceptional cases for which appropriate substantiation must be given in the tender dossier (e.g. when an applicant of this kind is expected to successfully commercialize the results and deliver return on the investment).

The target group of applicants defined by the programme conditions may be narrowed down by the tender dossier. The programme imposes certain additional conditions. For instance, the participation of at least one partner from the country of the partner agency and at least one participant from the Czech Republic is required. The preferred model of cooperation is an enterprise working together with

a research organisation. Furthermore, the involvement in the project must be approximately equal for all Czech partners (i.e. their shares in activities, the budget and results). Where an enterprise collaborates with a research organisation, at least one of the requirements set out by section 2.2.2., paragraph 28 of the Framework for State Aid must be met. The project must be either submitted as a proposal by a foreign participant to the partner agency or conducted already by the foreign partner with a support from a partner agency with the appropriate theme. Applicants may continue to apply for aid under this programme even if the foreign partner fails to receive aid from the partner agency; i.e. foreign partners may fund their involvement in the project from other sources, including their own. Czech participants shall attach to their project proposal relevant details on the part carried out by the foreign participant, including the funding for this foreign participant.

The first public tender for project proposals was announced in 2019. Further public tenders are expected to be announced on an annual basis between 2020 and 2023.

3.2.8 GAMA 2 (TP)

The full name of the programme is **GAMA 2 Programme of applied research, experimental development and innovation 2020 -2022**. This programme's objective is to support new systems and streamline the existing systems for transfer of R&D results – those produced by research organisations (ROs) alone or in collaboration with industry – into real-world applications with a view to their commercialisation. The medium-term objectives of the programme aim to stimulate creation of new results of R&D (including those in social sciences and humanities) which lead to actual innovation in enterprises (primarily small and medium-sized ones) using the R&D results generated by publicly-funded ROs. In the long term, these objectives will contribute to efficient use of public funding of R&D and help improve the economic performance of ROs, the competitiveness of the country's economy and society and to higher quality of life.

It should support R&D for innovation of existing products, services and technologies in businesses to facilitate their exploitation in additional areas (market expansion strategy) and for development of new products, services and technologies (market creation strategy).

According to information from the RD&I IS, support has been provided (until March 2020) for 23 projects.

Sub-programme 1 supports the application of results of R&D developed by ROs which show high potential for use in new and improved high-added-value products, manufacturing processes or services and which promise improved competitiveness.

Sub-programme 2 supports synergetic projects under the EU's Horizon 2020 and its successor, Horizon Europe. These include projects which receive the Seal of Excellence under Horizon 2020 and Horizon Europe. These projects lead to commercialization of the results of research. They help bridge the commercialization valley of death between research and the launch of a product. They show strong market potential and offer innovative solutions.

Amount of funding planned for the entire programme period

Period	2020	2021	2022	Total
Amount of aid (CZK)	180 mil.	185 mil.	185 mil.	550 mil.

Project period

The programme is planned for 3 years from 2020 to 2022.

The first public tender for projects under sub-programme 1 was announced in 2019 and funding will be released in 2020. Further public tenders are expected to be announced on an annual basis between

2020 and 2 for sub-programme 2 only. The project period must not extend beyond the period of the entire programme.

Form and amount of funding

Under sub-programme 1, the highest allowed aid intensity is 100%. Under sub-programme 2, it is 70%, provided that the block exemption is invoked under GBER. The aid intensity defined as a percentage of approved project costs will be calculated separately for each project, each recipient, and each additional participant according to the GBER, and the Framework and shall follow all the limits below.

Aid beneficiaries

Under sub-programme 1, the beneficiaries shall meet all conditions for ROs under law and the Framework. A research organisation may become another project participant, provided that its contribution is specified in the project proposal and that it enters into a project contract with the beneficiary.

In sub-programme 2, the beneficiaries include those entitled to apply for support under the relevant instrument of EU programme Horizon 2020 or Horizon Europe.

3.2.9 Environment for Life – Sectoral programme of the Ministry of the Environment (SS)

The full title of the programme is **Programme of applied research, experimental development and innovation in the field of the environment – Environment for Life 2020-2026**.

The goal of this programme is to provide new solutions related to the environment, to secure and expand a knowledge base which can contribute to creating a healthy and good-quality environment in the Czech Republic and to the sustainable use of its resources, minimize the adverse impacts of human activity on the environment, including cross-border impacts, and therefore improve the quality of life in Europe and across the globe. The solutions will help mitigate the impact of climate change on both nature and human society, namely by reducing the impact of and prevent drought, alleviating the effects of other extreme weather phenomena (wind, floods, extreme temperatures), improving the quality of the air and water, expansion of waste management, circular economy and effective use of raw materials, protection of natural resources, water, soil and rocks, preservation of biodiversity and improved protection of the environment and landscape and the development of an environmentally-friendly society which is secure and resilient to climate change.

The specific objectives of the programme are as follows:

1. Contribute to adaptation to climate change and to the introduction of economically effective mitigation measures
2. Help improve the quality of the environment and support the introduction of a circular economy.
3. Support a resilient and secure society and environment

Amount of funding planned for the entire programme period

Period	2020	2021	2022	2023	2024	2025	2026	Total
Amount of aid (CZK)	222 mil.	422 mil.	557 mil.	647 mil.	707 mil.	710 mil.	535 mil.	3,800 mil.

Project period

The programme is planned for 7 years from 2020 to 2026.

The first public tender was announced in 2019 and funding will be released in 2020. Further public tenders are expected to be announced on an annual basis between 2020 and 2024.

The maximum project period under this programme is 7 years (however, it may differ in sub-programmes). On average, the projects can be expected to run for 30 months. The project period must not extend beyond the period of the entire programme

Form and amount of funding

The average aid intensity over the programme period is 85 %. Under sub-programmes 1 and 3, the highest allowed aid intensity for a project is 100%. Under sub-programme 2, it is 90%, provided that the research organisation conducts it alone. The aid intensity defined as a percentage of approved project costs will be calculated separately for each project, each recipient, and each additional participant according to the limits stipulated in GBER, and the Framework. Participation of undertakings is provided for in Article 25, sections 5 and 6 of GBER. The maximum aid intensity for research organisations is 100%.

Aid beneficiaries

The beneficiaries under the Act, the Framework and GBER may include the following:

- **Undertakings** - any entities which meet the conditions set out in Article 2, sections 2 and 24 of the GBER, i.e. legal entities, regardless of their legal form, and natural persons which conduct economic activities and carry out the project alone or in cooperation with other participants, and prove their ability to co-fund the project from non-public resources
- **Research and knowledge dissemination organisations (research organisations, RO)**, legal entities which meet the definition in Article 2, section 83 of the GBER and the Act and which carry out the project alone or in cooperation with other participants.
- Under sub-programmes 1 and 3, eligible main participants (under sub-programme 2 other participants) include: **Other natural persons and legal entities** governed by public or private law, regardless of their legal form or method of funding which conduct project activities eligible for funding outside public support schemes, i.e. entities other than undertakings

3.2.10 TRANSPORT 2020+- sectoral programme of the Ministry of Transport (CK)

The full name of the programme is **Programme for support for applied research, experimental development and innovation in transport - TRANSPORT 2020+**. The main objective of the programme is to ensure, through the outcomes, results and impact of the projects, that the transport sector develops in a manner which reflects societal needs, boosts technological and knowledge-based growth and the competitiveness of the country. The requirements for transport, such as sustainability, safety and interoperability, will be reflected in specific objectives of the programme and be met by completing the research, development and innovation projects. The programme will also aim to fulfil public interests by defining the relevant methodological, legislative and standard frameworks.

The specific objectives of the programme are as follows:

1. Sustainable transport
2. Safe and resilient transport and transport infrastructure
3. Accessible and interoperable transport
4. Automation, digitisation and navigation and satellite systems

Amount of funding planned for the entire programme period

Period	2020	2021	2022	2023	2024	2025	2026	Total
Amount of aid (CZK)	150 mil.	250 mil.	350 mil.	450 mil.	350 mil.	250 mil.	150 mil.	1,950 mil.

Project period

The programme is planned for the period from 1 January 2020 to 31 December 2026 (7 years). Under the programme, the first public tender was announced in 2019 and the funding is to be released in 2020. Further public tenders are expected to be announced in 2020, 2021 and 2022. Overall, four public tenders will be announced with their funding released in the years 2020, 2021, 2022, 2022 and 2023. The expected project period under this programme is 36 months and the maximum period is 48 months. The project period must not extend beyond the period of the entire programme.

Form and amount of funding

The expected average aid intensity over the programme period is 80%. The aid intensity defined as a percentage of approved project costs shall be calculated separately for each project, each beneficiary and each additional participant. Where funding is granted to enterprises pursuant to the GBER, the maximum aid intensities defined therein shall apply. The highest permitted aid intensities for individual aid categories and categories of beneficiaries and other participants will be stipulated in the tender dossier for each public tender. The highest allowed aid intensity for a project is 100% (for research organisations). The actual aid rate for individual projects will be determined according to limits defined by the GBER. In accordance with the GBER, a bonus may be awarded beyond the general aid intensity to participants who have met the conditions for effective collaboration under Article 25, section 6b), letter i). Collaboration is understood not to include contract research and provision of research services.

Aid beneficiaries

Under the Act and the GBER, applicants and beneficiaries may include:

- **Undertakings** – legal entities and natural persons which, according to Annex 1 to the GBER, conduct economic activities, carry out the project alone or in cooperation with other participants, and prove their ability to co-fund the project from non-public resources,
- **Research and knowledge dissemination organisations (RO)** – legal entities which meet the definition of a research organisation according to Article 2 83 of the GBER and the Act and which carry out the project alone or in cooperation with other participants,
- **Other natural persons and legal entities** governed by public or private law, regardless of their legal form or method of funding which conduct other than economic activities, i.e. do not offer goods/services on the market (i.e. entities other than undertakings).

3.2.11 TREND-- sectoral programme of the Ministry of Transport (FW)

The full name of the programme is **Programme of applied research and experimental development TREND 2020-2027..**

The programme aims to strengthen the competitiveness of undertakings in the international context, primarily by expanding their foreign markets, entering new markets and shifting higher in global value chains. This objective will be fulfilled by providing aid for industrial research and experimental development projects and by the transfer of their results to practice, namely industrial production and products on the market. In line with the focus described below, the aid will be directed predominantly towards projects which develop new processes and materials, expand automation and robotization and the use of digital technologies. Sub-objectives which will contribute to meeting the main objective will include an increase in the number of undertakings which conduct their own research and development and their involvement in collaborative research, and strengthening the orientation of research organisations in the Czech Republic on internationally-competitive applied research to deliver benefits for industry and society.

According to information from the RD&I IS, support has been provided (until March 2020) for 113 projects.

Sub-programme 1 "Technology leaders"

Sub-programme 1 supports R&D and the use of its results for business activities (namely for improving the efficiency of production and the introduction of new products or services) of those undertakings which have experience with their own research and development (by stabilising and developing their research departments) and those which used to procure R&D services from research organisations instead of performing their own R&D.

Sub-programme 2 "Novices"

The sub-programme's objective is to help launch research and development activities in those undertakings which until now have neither conducted their own R&D on a regular basis nor purchased R&D services from research organisations.

Amount of funding planned for the entire programme period

Period	2020	2021	2022	2023	2024	2025	2026	2027	Total
Amount of aid (CZK)	515 mil.	1,095 mil.	1,605 mil.	1,900 mil.	1,950 mil.	1,435 mil.	855 mil.	345 mil.	9,700 mil.

Project period

The programme is planned for the period from 1 January 2020 to 31 December 2027. The first public tender was announced in 2019 and its funding is to be released in 2020. Further public tenders are to be announced on an annual basis throughout the 2020–2023 period. Their funding will begin between 2021 and 2024.

Project duration is expected to be no more than 60 months. The project period must not extend beyond the period of the entire programme.

Form and amount of funding

The aid intensity defined as a percentage of approved project costs will be calculated separately for each project, each recipient, and each additional participant according to the GBER, and the Framework. For a single project, it may reach no more than:

- 70% of total approved costs per project in sub-programme 1,
- 80% of total approved costs per project in sub-programme 2.
- Research organisations may receive up to 90% aid but only for their non-economic activities pursuant to Article 2.1.1, section 19 of the Framework, and provided that all related provisions of the GBER and the Framework are met, and the maximum allowed aid intensity for a single project under the programme does not exceed the limit for the sub-programme.

The public funding provider may stipulate a lower maximum aid intensity in the conditions of each public tender. In accordance with the GBER, a bonus may be awarded beyond the general aid intensity to participants who have met the conditions for effective collaboration. Within the definition of the Framework (point 27 et seq.) and the GBER (Article 2, section 90) effective collaboration means collaboration of no fewer than two independent parties to exchange knowledge or technology, or to achieve a common objective based on the division of labour where the parties jointly define the scope of the collaborative project and share its risks and outputs. Collaboration is understood not to include contract research and provision of research services.

Aid beneficiariesSub-programme 1 “Technology leaders”

Under the Act, applicants for aid may include undertakings, legal entities and natural persons which pursue economic activities according to Annex 1 to the GBER. Other project participants may include:

- undertakings (see the above definition),
- research organisations – organisational units of the state, organisational units of ministries engaged in research and legal persons which meet the definition of a research and knowledge dissemination organisation according to the GBER and the Framework.

Beneficiaries may include undertakings which are conducting the project alone or in collaboration with other undertakings and/or research organisations (in the form of collaborative research pursuant to the Framework). The applicant for specific-purpose support will be required to submit two years' worth of documents of economic (accounting) history. Specific qualification conditions will be set out in the public tender dossier by the public funding provider in accordance with the Act.

Sub-programme 1 “Novices”

Aid beneficiaries may include undertakings which are conducting the project in collaboration with an RO (as collaborative research and not as contract research). The applicant will be required to demonstrate that the aggregate worth of any aid they may have received from the state budget or other public budgets for their own or procured research and development activities over the last five years did not exceed CZK 1 billion. Other project participants may include:

- undertakings,

- research organisations – organisational units of the state, organisational units of ministries engaged in research or legal persons which meet the definition of a research organisation according to the GBER and the Framework.

Specific qualification conditions will be set out in the public tender dossier by the public funding provider in accordance with the Act.

3.2.12 Public tenders

The schedule of calls for tenders is shown in the following graph. Those marked in red are public tenders under programmes in this section, whereas the blue ones are the international ones outlined in section 6.5.

The schedule of public tenders conducted Technology Agency of the Czech Republic in 2020 is posted at <https://www.tacr.cz/programy-a-souteze/>

3.3 Ministry of Culture (MC)

The Ministry of Culture administers the Programme for Applied Research and Development of National and Cultural Identity 2016 – 2022 (NAKI II) (DG code) under which no more public tenders will be announced.

3.3.1 The NAKI II Programme for Applied Research and Development of National and Cultural Identity 2016–2022 (DG)

The main objective of the programme is to support research and development activities in the field of national and cultural identity to deliver economic or other societal benefits.

According to information from the RD&I IS, support has been provided from NAKI II (until March 2020) for 156 projects.

The programme's two overall objectives comprise six specific objectives.

Overall objective 1: National Identity

- Specific objective 1.1 Research and its application – Historical sciences and archaeology
- Specific objective 1.2 Research and its application – Language and literature
- Specific objective 1.3 Research and its application – Creation of art

Overall objective 2: Cultural Heritage

- Specific objective 2.1 Research and its application – Cultural heritage and territories of historical value
- Specific objective 2.2 Technologies and procedures for preserving cultural heritage
- Specific objective 2.3 Cultural heritage, education and media

Amount of funding planned for the entire programme period (according to current conditions of the programme)

Period	2016	2017	2018	2019	2020	2021	2022	Total
Amount of aid (CZK)	357.8 mil.	373,9 mil.	425 mil.	425 mil.	425 mil.	425 mil.	425 mil.	2,856.7mil.

Project period

The programme is planned for 7 years from 2016 to 2022. Projects are expected to run for at least 3 years but no more than 5 years. Projects carried out under the NAKI II programme must be completed by 31 December 2022 at the latest. In 2021 and 2022, the running projects launched before 2020 will be completed and no new projects will commence under the programme.

Form and amount of funding

Funding will be provided in the form of grants for approved costs to legal entities, and in the form of increased expenditure limits to organisational units of the state and to organisational units of ministries which are, at the same time, research organisations.

The aid intensity may reach 100%. The maximum allowed amount of project funding (without the notification requirement and detailed assessment by the European Commission) stipulated in section 6 (1) (e), point ii) of the GBER and Article 7.1 of the Framework as EUR 10 million will not be exceeded.

The aid intensity defined as a percentage of approved project costs will be calculated separately for each project, each recipient, and each additional participant according to the GBER, and the Framework. The amount of funding applied for must be justified and commensurate with the objectives, the project duration and the envisaged project results.

Aid beneficiaries

Funding is only provided to research organisations.

3.4 Ministry of Defence (MD)

The Ministry of Defence administers a programme of applied research and experimental development: Development of Armed Forces of the Czech Republic (2015–2022, code: OW) which is near completion. Another programme, “Ambition” is running.

3.4.1 Development of Armed Forces of the Czech Republic (OW)

The main goal of this programme is to develop the abilities of the Armed Forces of the Czech Republic in areas which are essential for the defence of the country, for achieving the country's declared political-military ambitions, and for the Armed Forces' successful performance in all other roles.

According to information from the RD&I IS, support has been provided (until March 2020) for 76 projects.

The programme has the following specific objectives:

- To expand the ability of the Armed Forces of the Czech Republic to uptake the outcomes of research and development and related knowledge for meeting its tasks.
- To continue the development of novel and upgraded products, services and technologies resulting from RDI programmes.
- To measure the benefits of the uptake of research results by the Ministry of Defence and to obtain feedback for decision-making at all management and command levels.

Amount of funding planned for the entire programme period (according to current conditions of the programme)

Period	2015	2016	2017	2018	2019	2020	2021	2022	Total
Amount of aid (CZK)	20 mil.	110 mil.	240 mil.	350 mil.	350 mil.	334 mil.	226 mil.	103 mil.	1,733 mil.

Project period

The programme is planned for 8 years from 2015 to 2022. Projects under this programme with a minimum project period of 1 year and a maximum of 4 years are to be completed by 31 December 2022 at the latest.

The first public tender was announced in 2014 and its funding began to be provided in 2015. Further public tenders will be announced as required, depending on the amount of funds available.

Form and amount of funding

The criteria for cost eligibility and further information will be stipulated in each tender dossier. The funding is provided for approved costs of the project, as defined in section 2, subsection I of the Support of Research and Development Act No. 130/2002 Sb. Approved costs must be used for activities directly related to project implementation and match the specific RDI categories.

Aid beneficiaries

In accordance with the Support of Research and Development Act No. 130/2002 Sb., the aid beneficiaries and other project participants can be any entity that meets the applicant organisation definition given in section 1, subsection 2, paragraph b) of Act No. 130/2002 Sb., and the supplier definition given in section 17, subsection 1, paragraph a) of Act No. 137/2006 Sb. Under this programme, funding for a project (public contract) shall only be granted to those applicants which fulfil the qualification criteria set out in sections 57 through 57 of Act No. 137/2006 Sb. If a project proposal is submitted by multiple applicant entities, each of them shall be required to prove their qualification. The method of proving qualifications is defined by the public funding provider in the tender dossier.

3.4.2 Ambition (OZ)

Full name of the programme: **Ambition – fostering development in areas where armed forces achieve significant results in NATO and the EU, 2020- 2026.** The Ministry of Defence will support applied research which will translate into development and innovation efforts leading to implementation of the results in practice to enhance the capabilities of armed forces and relevant relations to the security system of the country. Given the changing nature of the security environment, the objectives can be assumed to be expanded or reduced in certain aspects over the course of the programme. Under the programme, defence RDI projects will be carried out to meet precisely defined needs and requirements of the Ministry of Defence in the following areas:

- Development of national defence policy, command and control support in the changing security and operational environment, and the role of the armed forces in society
- Development of new weapon and defence systems
- Effective protection of the forces and material
- Training of personnel
- Preparation, sustainability and effective operation of the forces
- Medical support
- Development of command and control systems, communication and information systems and cyber defence

Amount of funding planned for the entire programme period (according to current conditions of the programme)

Year	2020	2021	2022	2023	2024	2025	2026	Total
Amount of aid (CZK)	20 mil.	140 mil.	230.2 mil.	340 mil.	325 mil.	185 mil.	95 mil.	1,335.2 mil.

Project period

The programme is planned for 7 years from 2020 to 2026.

Projects under this programme with a minimum project period of 1 year and a maximum of 4 years are to be completed by 31 December 2026 at the latest. Under the programme, the first projects will be awarded in 2020.

Form and amount of funding

Public aid will also be provided for basic research but mainly for applied research, experimental development and innovation in new or substantially enhanced products, technologies or services down to their validation in military field tests, introduction and practical use.

Aid beneficiaries

The aid beneficiaries and other project participants can be any entity that meets the requirements set out in Act No. 130/2002 Sb. Under this programme, funding for a project shall only be granted to those applicants which fulfil the qualification criteria set out in section 37 of Act No. 134/2016 Sb. If a project proposal is submitted by multiple applicants, each of them shall be required to prove their qualification. The method of proving qualification is defined by the public funding provider in the tender dossier.

3.4.2 Public tenders

The Ambition programme is planned to being administer support in 2020.

3.4.3 Contacts and additional information

www.army.cz

3.5 Ministry of Industry and Trade of the Czech Republic (MIT)

At the Ministry of Industry and Trade, the TRIO programme is running which is planned for the period from 2016 to 2022. An updated framework of the TRIO programme was approved by Government Resolution No. 280 on 30 April 2018. The changes included extension of the programme (i.e. funding of selected research and development projects) by one year, i.e. until and including 2022, and an increase of its budget to provide for the fourth public tender, which took place in autumn 2018. The follow-on TREND programme is a sectoral programme of the MIT administered by the Technology Agency of the Czech Republic. MIT has given its approval for the Country for future programme.

3.5.1TRIO (FV)

The full name of the programme is **Programme of applied research and experimental development “TRIO “2016-2022..** The programme’s mission is to support applied research and experimental development of Key Enabling Technologies (KETs). These are knowledge-intensive technologies, which are associated with high research intensity, rapid innovation cycles, and require highly-skilled personnel. KETs can find use in new products and services with added value, and can contribute to economic growth and enhanced competitiveness of the Czech Republic and the European Union.

According to information from the RD&I IS, support has been provided (until March 2020) for 495 projects.

Amount of funding planned for the entire programme period (according to current conditions of the programme)

Period	2016	2017	2018	2019	2020	2021	2022	Total
Amount of aid (CZK)	268 mil.	842 mil.	1,367 mil.	1,560 mil.	1,202 mil.	682 mil.	165 mil.	6,086 mil.

Project period

The planned programme period is 6 years (2016–2022). The first public tender was announced in 2015 and the funding was released in 2016. The second tender was announced in 2016 and funding is to be released in 2017. The third public tender was announced in 2017 and its funding was released in 2018. The last public tender took place in 2018. Project duration is expected to be no more than 48 months.

Form and amount of funding

Under the programme, the maximum allowed aggregate aid intensity is 80% of the approved costs. In accordance with the GBER, a bonus may be awarded beyond the general aid intensity to participants who have met the conditions for effective collaboration. Within the definition of the GBER and the Framework, effective collaboration means collaboration of no fewer than two independent parties to exchange knowledge or technology, or to achieve a common objective based on the division of labour where the parties jointly define the scope of the collaborative project and share its risks and outputs.

The project costs may be borne in full by one or more parties, which can thus relieve the other parties of financial risk. Collaboration is understood not to include contract research and provision of research services.

Research organisations may receive up to 100% aid but only for their non-economic activities pursuant to Article 2.1.1, section 19 of the Framework, and provided that all related provisions of the GBER and the Framework are met, and the maximum allowed aid intensity for a single project under the programme does not exceed 80%.

Aid beneficiaries

In accordance with the Support of Research and Development Act No. 130/2002 Sb., the applicant entities may include enterprises, and legal and natural persons which, in line with Annex 1 to the GBER, conduct economic activities and carry out the project in effective collaboration with at least one research organisation. A research organisation may apply for funding as well but it will be considered as an enterprise, i.e. it will have to prove its ability to provide co-funding for the project from non-public resources, demonstrate implementation of project results in practice, and accept the conditions applicable to enterprise with respect to the rate of public aid. Under such circumstances, the project need not be carried out with effective collaboration between multiple entities.

Other participants may include enterprises and research organisations, where the latter are understood as legal entities which meet the definition of a research organisation as given by law, the GBER and the Framework. Screening, to ascertain whether an entity meets the definition of a research organisation, will be carried out by the public funding provider on an individual basis, as part of the project proposal evaluation, and by a procedure approved by the Research and Development Council.

3.5.2 The Country for the Future (FX)

One of the first financial measures brought by the new Innovation Strategy of the Czech Republic 2019 – 2030 was a programme for supporting innovation: **The Country For The Future 2020 - 2027**. It targets the national start-up and spin-off environment, digitisation and smart investment. Within this framework, it promotes robotization, automation and innovation in companies, mainly small and medium-sized enterprises, in line with the Industry 4.0 standards and key trends in promising industries.

The programme covers three themes:

- formation of innovative companies (high-tech start-ups), their development and internationalization;
- fostering innovation infrastructure with the emphasis on digital services and artificial intelligence;
- implementation of innovation in practice (predominantly by exploiting existing results of R&D).

Sub-programme 1 “Start-ups”

The purpose of the sub-programme is to set up a comprehensive support framework for establishing, developing and funding high-potential start-ups oriented on innovative products and services. The goal is to increase the number of newly-formed innovation-oriented companies and boost their growth, and to support companies with global innovation potential and accelerate their internationalization.

Sub-programme 2 “Digital leaders”

The sub-programme aims to foster the creation of Digital Innovation Hubs (DIH) and the expansion of their services in response to the needs formulated in the Digital Czech Republic strategy. The sub-programme will foster synergetic and complementary activities related to the Digital Europe programme which is under preparation. Sub-projects will relate to co-funding of projects under Digital Europe (co-funding from national sources is planned as part of this programme). These projects with relevance on the European scale will be complemented with other projects focusing on completion of the national DIH network offering full service for innovative SMEs.

Sub-programme 3 “Innovation for industrial practice”

The sub-programme aims to boost innovation implementation in companies, predominantly SMEs, in line with Industry 4.0 standards and key trends in promising sectors. It will help companies adopt innovation, such as by exploiting the results of RDI programmes, particularly in technologies and innovation related to automation, robotization and artificial intelligence, through investment. The projects will cover the preparation for adopting innovation in companies and the acquisition of know-how, the relevant technology and certificates for new products prior to launching production or a new service. It will boost the collaboration between academia and the business sector in technology and knowledge transfer, and help convert the expertise of research organisations into marketable skills.

Amount of funding planned for the entire programme period (according to current conditions of the programme)

Period	2020	2021	2022	2023	2024	2025	2026	2027	Total
Amount of aid (CZK)	650 mil.	900 mil.	1,150 mil.	1,050 mil.	850 mil.	600 mil.	450 mil.	450 mil.	6,100 mil.

Project period

The programme is planned for the period from 1 January 2020 to 31 December 2027. The first public tender was announced in 2020. Several public tenders are planned each calendar year, depending on the requirements arising in sub-programmes.

Form and amount of funding

The aid intensity defined as a percentage of approved project costs will be calculated separately for each project, each recipient, and each additional participant according to the GBER, and the Framework or under de minimis rules. For a single project, it may reach no more than:

- 100 % of total approved costs per project in sub-programme 1,
- 100 % of total approved costs per project in sub-programme 2,
- 50 % of total approved costs per project in sub-programme 3.

The public funding provider may set lower maximum aid rates in individual public tender conditions for projects than above.

Aid beneficiaries

Sub-programme 1: Applicants may include organisational units of the state or units of ministries which are engaged in research and development, as well as legal persons as end recipients. Specific qualification conditions will be set out in the public tender dossier by the public funding provider in accordance with the Act.

Sub-programme 2: Under the Act, applicants for aid for projects may include organisational units of the state or those of ministries which are engaged in research and development.

Sub-programme 3: Under the Act, applicants for aid may include undertakings, i.e., legal entities which pursue economic activities according to Annex 1 to the GBER and qualify as small and medium-sized enterprises.

3.5.2 Public tenders

Under Trio programme, no public tenders are planned. The TREND programme is administered by TACR – see section 3.2.11. Under TCFF programme, several public tenders are planned for each year, subject to the requirements of individual sub-programmes. They will be announced at <https://www.mpo.cz/cz/podnikani/podpora-vyzkumu-a-vyvoje/>

3.6 Ministry of Education, Youth and Sports (MEYS)

Today, the MEYS operates two RDI support programmes (in addition to the international cooperation programmes described in chapter 7). They are the NPU I and NPU II programmes.

3.6.1 National Sustainability Programme I 2013 - 2020 (LO)

The programme strengthens the development and sustainability of new European centres of excellence, regional research centres, and other research centres built in the Czech Republic in 2007–2013/2015 with funding from the European Regional Development Fund, whose building costs were less than EUR 50 million, and which currently receive no further support from Structural Funds. These centres were funded from the Research and Development for Innovation Operational Programme (RDIOP), Priority Axis 1 (Centres of Excellence) and Priority Axis 2 (Regional Research Centres in Regions outside the Capital City of Prague), and from Prague – Competitiveness Operational Programme (PCOP).

According to information from the RD&I IS, support has been provided (until March 2020) for 60 projects. No further calls will be announced under this programme.

3.6.2 National Sustainability Programme II 2013 - 2020 (LQ)

NSP II contributes to the sustainability of those centres of research, experimental development and innovation which house large infrastructures, were built in the Czech Republic in 2007–2013/2015 under the operational programmes of European Structural Funds, had building costs of more than EUR 50 million, and currently receive no further support from Structural Funds. These centres were funded from the RDIOP – Priority Axis 1 (Centres of Excellence) and Priority Axis 2 (Regional Research Centres in Regions outside the Capital City of Prague), and from the PCOP.

According to information from the RD&I IS, support has been provided (until March 2020) for 6 projects. No further calls will be announced under this programme.

3.6.3 Public tenders

The Ministry of Education will not announce any public tenders under national programmes.

3.6.4 Contacts and additional information

Ministry of Education of the Czech Republic
Karmelitská 7, 118 12 Praha 1, Czech Republic

3.7 Ministry of the Interior (MI)

The Ministry of the Interior provides aid under three programmes. The projects under VI and VH programmes are coming to an end. No new calls for proposals will be announced. The follow-on programme IMPACT continues to announce calls.

The year 2018 brought extension of the Programme of Security Research of the Czech Republic 2015–2020 until 2022 and an increase in its budget. The change was made in response to findings from the National Security Audit. The Audit identified new security threats and current needs of the security system. The change provided for an increase in the number of projects and results funded and for their faster completion and implementation in the security practice.

The main objective of the programme is to deliver better national security through new technologies, knowledge, and other outcomes of applied research, experimental development and innovation in the identification of, the prevention of, and protection against unlawful behaviour, and natural and industrial catastrophes that may harm the citizens, organisations, property, and infrastructures of the Czech Republic. The complexity of threats and risks, and the need for relevant changes to the security system of the Czech Republic continue to increase. Concatenation of potential security threats to the country and multiplication of their consequences are conceivable occurrences.

According to information from the RD&I IS, support has been provided (until March 2020) for 171 projects.

Amount of funding planned for the entire programme period (according to current conditions of the programme)

Period	2015	2016	2017	2018	2019	2020	2021	2022	Total
Amount of aid (CZK)	200 mil.	400 mil.	400 mil.	500 mil.	500 mil.	500 mil.	200 mil.	100 mil.	2,800 mil.

Project period

The programme is planned for the period from 1 January 2015 to 31 December 2022. Projects are expected to run for at least 2 years but no more than 6 years. Projects implemented under the programme must be completed by 31 December 2022 at the latest.

The first public tender for projects under the programme was announced in 2014 and the funding was released in 2015. For the public tenders held in 2015, funding was released in 2017.

Form and amount of funding

The aid intensity defined as a percentage of the approved project costs shall be calculated separately for each project, each beneficiary, and each additional participant according to the Community Framework. It will depend on the applicant organisation type, the category of research and development, and the nature of project activities. The aid intensity is determined with respect to a basis defined by the total approved costs of the project.

The average amount of funding (from the state budget) for individual years is expected to equal 75 % of the total approved costs of a project.

Aid beneficiaries

In accordance with the Support of Research and Development Act No. 130/2002 Sb., and the Framework, those eligible for funding include:

- **Research organisations** – legal entities which meet the definition of a research organisation given in the Support of Research and Development Act No. 130/2002 Sb. and in the Framework, which carry out the project alone or in cooperation with other participants.

- **Undertakings** – legal entities and natural persons which, according to Annex 1 to Regulation of the Commission No. 800/2008, conduct economic activities, carry out the project alone or in cooperation with other participants, and prove their ability to co-fund the project from non-public resources.

3.7.2 Programme for Security Research for National Needs 2016 - 2021 (VH)

The main objective of the programme is to deliver better national security by supporting research that meets the needs of state administration and enables those responsible for national security to acquire, master, maintain and develop specific abilities for performing effectively.

According to information from the RD&I IS, support has been provided (until March 2020) for 43 projects.

Amount of funding planned for the entire programme period (according to current conditions of the programme)

Period	2016	2017	2018	2019	2020	2021	Total
Amount of aid (CZK)	100 mil.	140 mil.	140 mil.	140 mil.	140 mil.	140 mil.	800 mil.

Project period

The VH programme is planned for the period from 1 January 2016 to 31 December 2021. Calls for tenders for public contracts began to be announced in 2015 and project start date is 1 January 2016. 2020 will be the last one for awarding new contracts. Given the focus on research and development, and the variety of needs, the minimum public contract period is to be 12 months. The maximum contrast period is 60 months. All projects must be completed before the end of the programme period.

Form and amount of funding

As this programme is to be conducted through public contracts according to current legislation, and the sole user of their results is the state, the maximum allowed aid intensity is 100%.

Aid beneficiaries

Pursuant to section 2, subsection 2, paragraph b) of the Support of Research and Development Act No. 130/2002 Sb., eligible applicants for the specific-purpose funding include organisational units of the state, organisational units of ministries engaged in research and development, as well as legal and natural persons.

3.7.3 Strategic support for the advancement of security research in the Czech Republic 2019 - 2025 IMPACT 1 (VJ)

The programme aims to reach such level of knowledge, technology and engineering in the Czech Republic which would enable the country to acquire, master, maintain and develop specific abilities needed for national security and the safety of its citizens. The programme creates conditions for developing and exploiting the potential of academia and the public research sector in order to provide synergistic and long-term research support for the country's security system. Over the long term, two characteristic groups of players have been forming in the security research community, whose notable activities are indispensable for meaningful operation of the system. The first one includes security research organisations, which act essentially as governmental laboratories, some faculties at institutions of higher education, and institutes of the Academy of Sciences of the Czech Republic. The other group is gradually becoming the community leader, particularly with the gradual materialization of outcomes of investment support of appreciably larger public funding providers. Both groups play a key role in the future development of security research in the Czech Republic and in meeting the transformation goals of the Intersectoral Framework of Security Research. The programme reflects the various degrees of specialization and internal capacities of key research organisations, as well as the need to maintain and restore the ability to conduct research in certain special fields of interest which have received little attention in terms of research support in the Czech Republic.

The programme comprises three profoundly different sub-programmes:

- Sub-programme 1 aims to interlink and integrate complementary research projects carried out by institutions which have already developed individual abilities. The goal of this sub-programme is to provide long-term coordinated research support for security system capabilities.
- Sub-programme 2 focuses on organisations with a superior background and facilities and extensive general abilities. The sub-programme offers the option to establish small-size teams specialized in security research, possibly leading to a diversification of resources and to a more profound societal impact of research activities at these institutions. The goal of this sub-programme is to advance the growth of research teams which have specialized in security research for a long time.
- Sub-programme 3 focuses on creating, maintaining and deepening international cooperation in security research. In view of shrinking national resources for security research, it is becoming increasingly important to ensure that organisations which have been involved in the field on a long-term and consistent basis continue to maintain and deepen those contacts which promise to diversify funding and/or human resources development. This sub-programme aims to promote internationalization initiatives in the security research community.

Amount of funding planned for the entire programme period (according to current conditions of the programme)

Period	2019	2020	2021	2022	2023	2024	2025	Total
Amount of aid (CZK)	30 mil.	200 mil.	200 mil.	200 mil.	200 mil.	200 mil.	200 mil.	1,230 mil.

Project period

The programme is planned for the period from 1 January 2019 to 31 December 2025. Public tenders for research, experimental development and innovation projects under the programme will be held according to individual sub-programme schedules. The first public tender is announced in 2020 (in sub-programme 1) and funding is to be released in the same year. Further public tenders will be announced depending on the available funding and the objectives of the programme. Projects implemented under the programme must be completed by 31 December 2025 at the latest.

Form and amount of funding

As the programme is intended exclusively for research organisations, 100% aid rate is expected to apply to all projects under the programme.

Aid beneficiaries

In accordance with the Support of Research and Development Act No. 130/2002 Sb., and the Framework, those eligible for funding include:

- **Research organisations** – legal entities which meet the definition of a research organisation given in the Support of Research and Development Act No. 130/2002 Sb. and in the Framework, which carry out the project alone or in cooperation with other participants.

3.7.4 Public tenders

In VJ programme, a public tender will be announced on 1 February 2020.

3.8 Ministry of Health (MH)

The Ministry of Health runs the Programme to Support Applied Medical Research and Development for 2015–2022 and Programme to Support Applied Medical Research and Development for 2020–2026.

3.8.1 Programme to Support Applied Medical Research and Development 2015–2022 (NV)

The decisive precondition for economic, social and individual-oriented success of a society is healthy population. Essential to what is understood as health is the dynamics of changes and various processes which, however, show considerable inertia. As a result, numerous discrepancies arise, the most notable of which are those between the advances of medicine and the economic capacities of the country. Medicine must focus on the most widespread and most severe threats: chronic non-infectious diseases, such as cardiovascular and cerebrovascular diseases, cancer, dementia and other mental diseases, or chronic diseases of the musculoskeletal system, and others. Attention must be paid to effects of the environment, which are changing profoundly. It is important to support the creation and evolution of new treatments and techniques (such as genetics and nanotechnology). New infectious diseases and the ever increasing resistance of new agents must be monitored. In response, virology and other disciplines must be supported. Fighting chronic non-infectious lifestyle diseases caused mostly by the unhealthy behaviour of a large part of the population will be a major challenge. The mission of the health care system is to adapt to the changing environment, knowledge, and society in order to provide all citizens with guaranteed access to health support and protection, to encourage healthy lifestyle, and enforce the rules of effective disease prevention.

According to information from the RD&I IS, this programme has, until March 2020, supported 468 projects with state aid totalling CZK 4.739 billion.

Amount of funding planned for the entire programme period (according to current conditions of the programme)

Period	2015	2016	2017	2018	2019	2020	2021	2022	Total
Amount of aid (CZK)	350 mil.	800 mil.	900 mil.	900 mil.	1,050 mil.	1,050 mil.	800 mil.	600 mil.	6,500 mil.

Project period

The programme is planned for 8 years from 2015 to 2022. The first public tender was announced in 2014, and the subsequent ones are held annually. The last public tender was announced in 2018, with the funding released in 2019.

Projects are expected to run at least 3 years but no more than 5 years. Projects implemented under the programme must be completed by 31 December 2022 at the latest. Five-year projects should focus on very demanding and complex issues, and their authors will be required to meet the strict criteria of excellent research imposed by the Project Evaluation System. Details are given in the relevant tender dossiers.

Form and amount of funding

Funding is provided to legal entities and natural persons in the form of grants for approved costs. By contrast, the support for organisational units of the state and organisational units of ministries takes the form of increased expenditure limits.

The aid intensity defined as a percentage of approved project costs will be calculated separately for each project, each recipient, and each additional participant according to the GBER, and the Framework. Pursuant to Support of Research and Development Act No. 130/2002 Sb., the Framework and the GBER, the maximum allowed aid intensity in a single project conducted by only research organisations can reach 100% of the approved costs.

For projects which are co-investigated by undertakings, the maximum allowed aid intensities for applied research and experimental development and individual categories of beneficiaries and other participants will be detailed in the tender dossier for the public tender under applicable laws and regulations of the EU.

Aid beneficiaries

According to Support of Research and Development Act No. 130/2002 Sb., the GBER and the Framework, eligible applicant entities, aid beneficiaries, and other participants are the following:

- **Research organisations** – legal entities which, according to the GBER, meet the definition of a research organisation, carry out the project alone or in cooperation with other participants, and prove their ability to co-fund the project from non-public resources.
- **Undertakings** – legal entities and natural persons which, according to Annex 1 to the GBER, conduct economic activities, carry out the project alone or in cooperation with other participants, and prove their ability to co-fund the project from non-public resources.

3.8.2 Programme to Support Applied Medical Research and Development 2020-2026 (NU)

The main goal of the programme is to improve the health of the Czech population in both medium and long terms through the output and outcomes of the projects and to continue to fulfil current needs of the national health sector. The projects will generate new findings and knowledge to enhance clinical procedures in diagnosis, treatment and prevention of the most widespread as well as rare and new diseases. The programme also aims to bring the medical research in the Czech Republic to a level comparable to that in developed member states of the European Union. The programme covers three principal areas: Origin and evolution of diseases, New diagnostic and therapeutic methods, and Epidemiology and prevention of the most serious diseases; these are subdivided into 21 sub-areas and 43 sub-objectives. Specific targets are related to the sub-areas.

According to information from the RD&I IS, support has been provided (until March 2020) for 98 projects.

Amount of funding planned for the entire programme period (according to current conditions of the programme)

Period	2020	2021	2022	2023	2024	2025	2026	Total
Amount of aid (CZK)	300 mil.	750 mil.	1,050 mil.	1,300 mil.	1,050 mil.	750 mil.	300 mil.	5,500 mil.

Project period

The programme is planned for 7 years from 2020 to 2026. The project period is to be between 3 and 5 years. It will be defined separately for each public tender for research, experimental development and innovation projects with respect to optimal use of the available state budget funds. Projects implemented under the programme must be completed by 31 December 2026 at the latest. Details are given in the relevant tender dossiers.

Form and amount of funding

Funding is provided to legal entities and natural persons in the form of grants for approved costs. By contrast, the support for organisational units of the state and organisational units of ministries takes the form of increased expenditure limits.

The aid intensity defined as a percentage of approved project costs will be calculated separately for each project, each recipient, and each additional participant according to the GBER, and the Framework. Pursuant to Act No. 130/2002 Sb., the and the GBER, the maximum allowed aid intensity in a single project conducted by only research organisations can reach 100% of the approved costs. It will cover non-economic activities of research organisations under section 19 et seq. of the Framework.

Aid beneficiaries

According to Support of Research and Development Act No. 130/2002 Sb., the GBER and the Framework, eligible applicant entities, aid beneficiaries, and other participants are the following:

- **Research organisations** – legal entities which, according to the GBER, meet the definition of a research organisation, carry out the project alone or in cooperation with other participants, and prove their ability to co-fund the project from non-public resources.
- **Undertakings** – legal entities and natural persons which, according to Annex 1 to the GBER, conduct economic activities, carry out the project alone or in cooperation with other participants, and prove their ability to co-fund the project from non-public resources. Under section 1(4)(a) of GBER, no undertaking subject to an outstanding recovery order may qualify as a beneficiary.

3.8.3 Public tenders

The projects under NV programme are coming to an end. No new calls for proposals will be announced. Under the follow-on Programme to Support Applied Medical Research and Development for 2020–2026, a public tender is to be announced in 2020.

3.9 Ministry of Agriculture (MA)

At the Ministry of Agriculture, a programme entitled Programme for Applied Research of the Ministry of Agriculture for 2017–2025, “Earth”.

3.9.1 Programme for applied research of the Ministry of Agriculture for 2017–2025, EARTH (QK)

The programme supports applied research projects in agriculture, the food sector, water management and forestry which promise high innovation potential and improvement in the stability, volume and quality of production and are aimed at new products, technologies and production processes. The programme will stimulate the advancement of existing disciplines and technologies and inspire creation of new knowledge, methods and procedures, boosting the competitiveness of the Czech agricultural sector and expanding the use of renewable resources for the benefit of the society. It also aims to improve the effectiveness of public funding of agricultural research and the general recognition of the importance of research.

According to information from the RD&I IS, support has been provided (until March 2020) for 151 projects.

Amount of funding planned for the entire programme period (according to current conditions of the programme)

Period	2017	2018	2019	2020	2021	2022	2023	2024	2025	Total
Amount of aid (CZK)	50.6 mil.	156 mil.	490 mil.	490 mil.	600 mil.	600 mil.	600 mil.	300 mil.	270 mil.	3,556.7 mil.

Project period

The programme is planned for 9 years from 2017 to 2025.

Under the programme, the first public tender for research, experimental development and innovation (“public tender”) was announced in 2016 and the funding is to be released in 2017. It was followed by public tenders in 2017 and 2018. Further public tenders were to be announced in 2020, 2021 and 2022. Overall, six public tenders were to be announced with their funding released in the years 2017, 2018, 2019, 2021, 2022 and 2023. The projects for the public tenders announced in 2021 and 2022 shall have periods of maximum 4 and 3 years, respectively.

Form and amount of funding

Funding will be provided in the form of grants for approved costs to legal and natural persons, and in the form of increased expenditures to organisational units of the state, organisational units of regional self-government units or organisational units of ministries engaged in research and development. The aid intensity shall be calculated separately for each project, each beneficiary and each additional participant in accordance with specifications for individual sub-programmes. No funding shall be provided to undertakings in difficulty, as defined in Article 2, section 14 of the ABER or Article 2, section 18 of the GBER, and to enterprises that are subject to an outstanding recovery order following a previous Commission decision declaring an aid illegal and incompatible with the internal market (Article 1 (5) (a) of the ABER and Article 1 (4) (a) of the GBER). Under these projects, it is prohibited to use additional funding to cover the same eligible costs from other national or European resources. Applicant entities are therefore required to report any public funding they have received for an identical or similar project or part of project.

The aid intensity for each beneficiary and other project participants shall be no higher than stipulated in the ABER and GBER. In accordance with Article 25, section 6 of the GBER, surcharges may be provided on top of this basic aid intensity. The maximum surcharge levels are given in the programme conditions and this information shall also be included in the tender dossier for public tenders. The funding provider shall determine the maximum aid intensity for research organisations and for research in specific areas of the agricultural sector in accordance with European regulations and the rules of the programme. Pursuant to Article 9 of the GBER, the required information about the aid amount and the beneficiary, as defined in Annex III to the GBER, shall be published for each individual aid amount in excess of €500,000.

Under the programme, the aid intensity stipulated for research and development in agriculture, forestry, fishery and aquaculture may be used in accordance with the above-listed European regulations. The maximum aid intensity determined by the funding provider may reach 100% of the approved costs under conditions applicable to every beneficiary and other project participants (Article 31 of the ABER and Article 30 of the GBER).

Aid beneficiaries

According to Czech and EU legislation (identified in the programme conditions), eligible applicant entities and aid beneficiaries are research organisations and, in the role of additional participants, undertakings (as specified in the conditions for individual sub-programmes in chapter 15).

Research organisations which are defined in the ABER and GBER as “research and knowledge dissemination organisations” include entities regardless of their legal standing and method of funding, whose principal aim is to conduct independent basic research, industrial research or experimental development or publicly disseminate the results of such activities through instruction, publications and knowledge transfer. Where such entities also pursue economic activities, the funding, costs and revenues relating to these economic activities must be accounted for separately. Undertakings that can exert influence upon such entities, for example, shareholders or members, cannot enjoy preferential access to their research capacities or to the results generated by those entities.

Undertakings are those legal entities (legal and natural persons), regardless of legal form, which (according to Annex I to the ABER and GBER) carry out the project alone or in cooperation with other participants, and prove their ability to co-fund the project from non-public resources.

3.9.2 Public tenders

A public tender is planned for March 2020 under Earth programme. Its budget for projects in the first year is approximately CZK 156 million and about 50 projects are expected to receive aid.

3.9.3 Contacts and additional information

The Ministry of Agriculture of the Czech Republic has established the National Agency for Agricultural Research. The Agency is part of the Research, Education and Consultancy Department of the Ministry. In cooperation with programme committees appointed by the Deputy Minister of Agriculture, it conducts public tenders for R&D projects according to the conditions and criteria identified by the Ministry. On an annual basis, the Agency organises evaluations of interim and final project reports.

4. OPERATIONAL PROGRAMMES FOR SUPPORT OF RESEARCH AND DEVELOPMENT IN THE CZECH REPUBLIC

This chapter is devoted to the Enterprise and Innovation for Competitiveness Operational Programme 2014–2020 (EICOP), and the Research, Development and Education Operational Programme (RDEOP). The outline below relates to the period 2021-2027.

The Czech Republic has advanced in its preparation of new operational programmes and has been commended in this regard by the European Commission. Despite that, a number of key aspects remain to be addressed. Crucially, approval for the Multiannual Financial Framework (MFF) is the essential milestone in the preparation for the 2021-2027 programme period. The approval will be followed by steps dependent on this milestone.

Another difficult aspect is the freshly approved Just Transition Fund (JTF).

The European Commission issued the draft European Green Deal in December 2019 which aimed to achieve climate neutrality of the EU by 2050. The Deal will be implemented between 2021 and 2027 through the Just Transition Mechanism (JTM). The existence of the JTF is certain to reflect in the strategic focus of the aid provided from the Cohesion Policy funds. Yet, the Czech Republic had already made substantial progress in the programming efforts when the new fund was announced. It will not be that simple to integrate the JTF into the cohesion policy implementation scheme as the rules are rather complicated and the integration requires discussion with all stakeholders.

The table below shows the proposed distribution of 75% of the aid across operational programmes. A procedure involving the allocation of no more than 75% of the funds was already used for the current programme period and has proven useful. The remaining 25% becomes a reserve fund of a sort to be used for final allocation among operational programmes based on negotiation and their detailed specification.

OP D	MT	CZK 72.6 billion
IROP	MRD	CZK 72.3 billion
TACOP	MIT	CZK 71.5 billion
EOP	ME	CZK 50.4 billion
JAKOP	MEYS	CZK 40.9 billion
E+OP	MLSA	CZK 28.8 billion

Source: Progress in preparation of Partnership Agreement and operational programmes for 2021–2027

4.1 Enterprise and Innovation for Competitiveness Operational Programme 2014–2020

The objective of the Enterprise and Innovation for Competitiveness Operational Programme (EICOP) is to build competitive and sustainable economy based on knowledge and innovation. The competent managing authority is the Ministry of Industry and Trade and the authorized agency is the newly-established Business and Innovation Agency which took over after Czechinvest.

4.1.1 General information

All support programmes under EICOP are co-funded from the resources of the European Regional Development Fund. For each of these programmes, objectives have been defined together with eligible aid beneficiaries and activities, as well as the conditions for submitting project proposals, and other aspects. Based on these government-approved support programmes, calls for proposals are to be announced. A total of approx. CZK 120 billion has been allocated for these projects (the European Regional Development Fund). A major portion of this (almost 60 %) goes to Priority Axes 1 and 3, which are directly related to some of the key objectives of the Europe 2020 strategy.

Grants for small, medium-sized and large enterprises may account for no more than 45 %, 35 %, and 25 % of the approved costs, respectively. Exceptions are allowed in industrial research, experimental

development or energy saving projects. The nature of the planned investment and the rules of the particular call for proposals will play a role as well.

Geographical location plays a role in the grant award as well. Eligible beneficiaries for EICOP funding are entrepreneurs from all regions of the Czech Republic, except Prague, the capital city. If, despite that, Prague-based entities decide to invest outside the capital's borders, the same rules as those for entrepreneurs from other regions will apply to them.

For the purposes set out for this publication, the key is Priority Axis 1: Promotion of research and development for innovation. Investment priority 1: Promoting business investment in research and innovation, and developing links and synergies between enterprises, research and development centres, and the higher education sector. Emphasis will be placed on promoting investment in product and service development, technology transfer, social innovation, eco-innovation, public service applications, demand stimulation, networking, the formation of clusters, and achieving open innovation through smart specialisation. Support will be provided for technological and applied research, pilot lines, early product validation actions, advanced manufacturing capabilities, and primary production, in particular in key enabling technologies, and in the dissemination of technologies for general use.

- **Specific objective 1: Increasing innovation performance of enterprises**

The main goal is to advance entrepreneurship which relies on the intensive creation and exploitation of unique knowledge in all sectors relevant to the specialisation of the Czech Republic. The intended expansion of advanced manufacturing and R&D infrastructures will strengthen the innovation capacity of enterprises, enable their own R&D activities, and boost demand for the services of research organisations, including technologies promising the largest growth. Fulfilment of strategic objectives will pave the way to the market for higher-order innovations, and improve the technical stages of the innovation process.

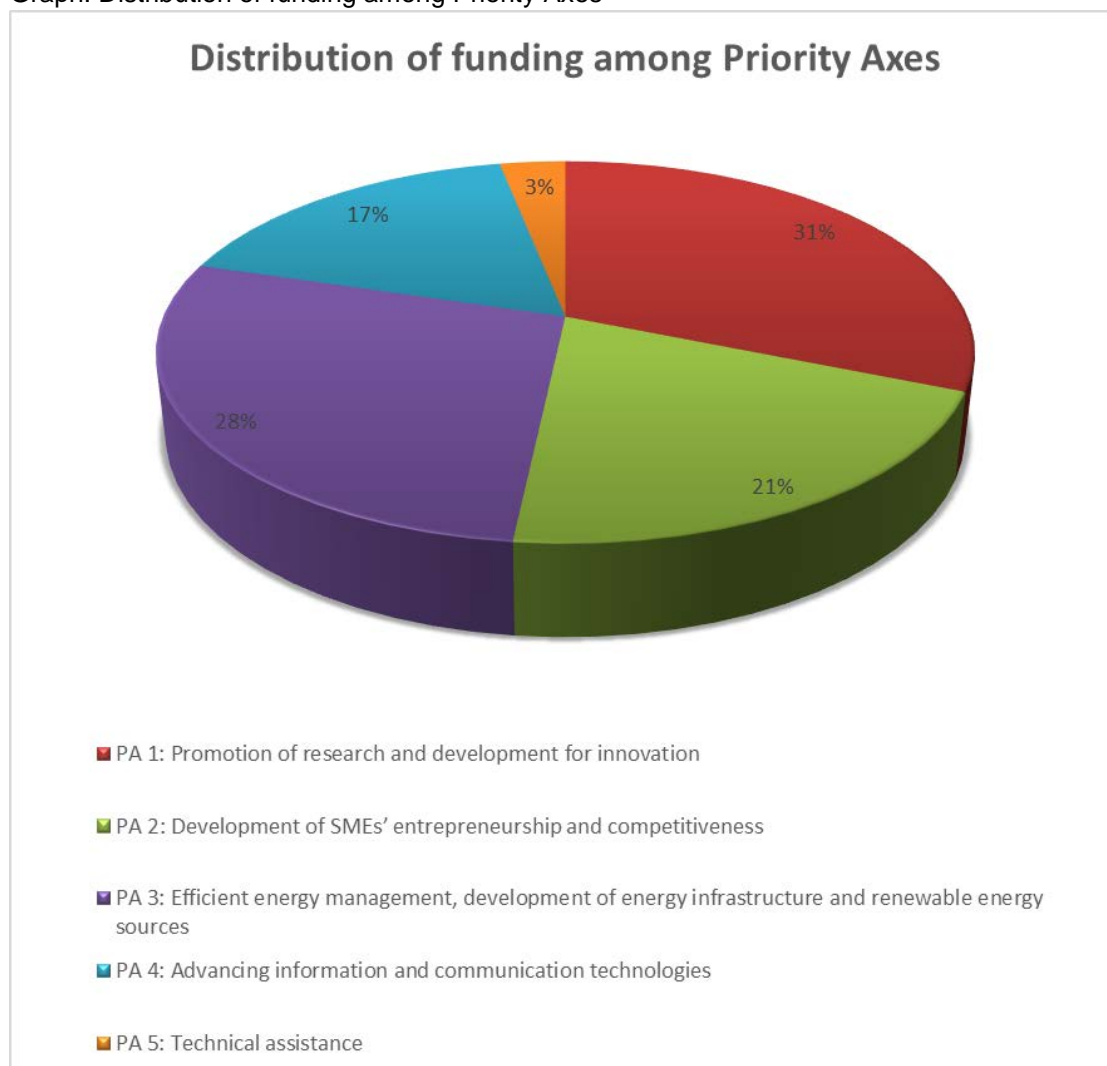

- **Specific objective 2: Improving the intensity and efficiency of cooperation in research, development and innovation**

By improving the quality of services of supporting infrastructures, joint RDI activities of enterprises and public and business sectors will be accelerated. Fulfilment of this specific objective will promote knowledge and technology transfers, mobility, cross-sectoral cooperation, growth of innovative firms, and strengthen competitive advantages, the vital element of the country's innovation system.

Other research and development-linked priorities:

- **Priority Axis 2: Development of SMEs' entrepreneurship and competitiveness**
Investment priority 1: Promoting entrepreneurship by fostering the commercialisation of new ideas, and the creation of new firms, whether independently or through business incubators.
- **Priority Axis 3: Efficient energy management, development of energy infrastructure and renewable energy sources, and support for the introduction of new technologies in the management of energy and secondary raw materials**
Investment priority 4: Promoting research and innovation in, and adoption of, low-carbon technologies.
- **Priority Axis 4: Development of high-speed internet access networks, and information and communications technologies**
Investment priority 2: Developing ICT products and services, e-commerce, and enhancing the demand for ICT.

Graph: Distribution of funding among Priority Axes

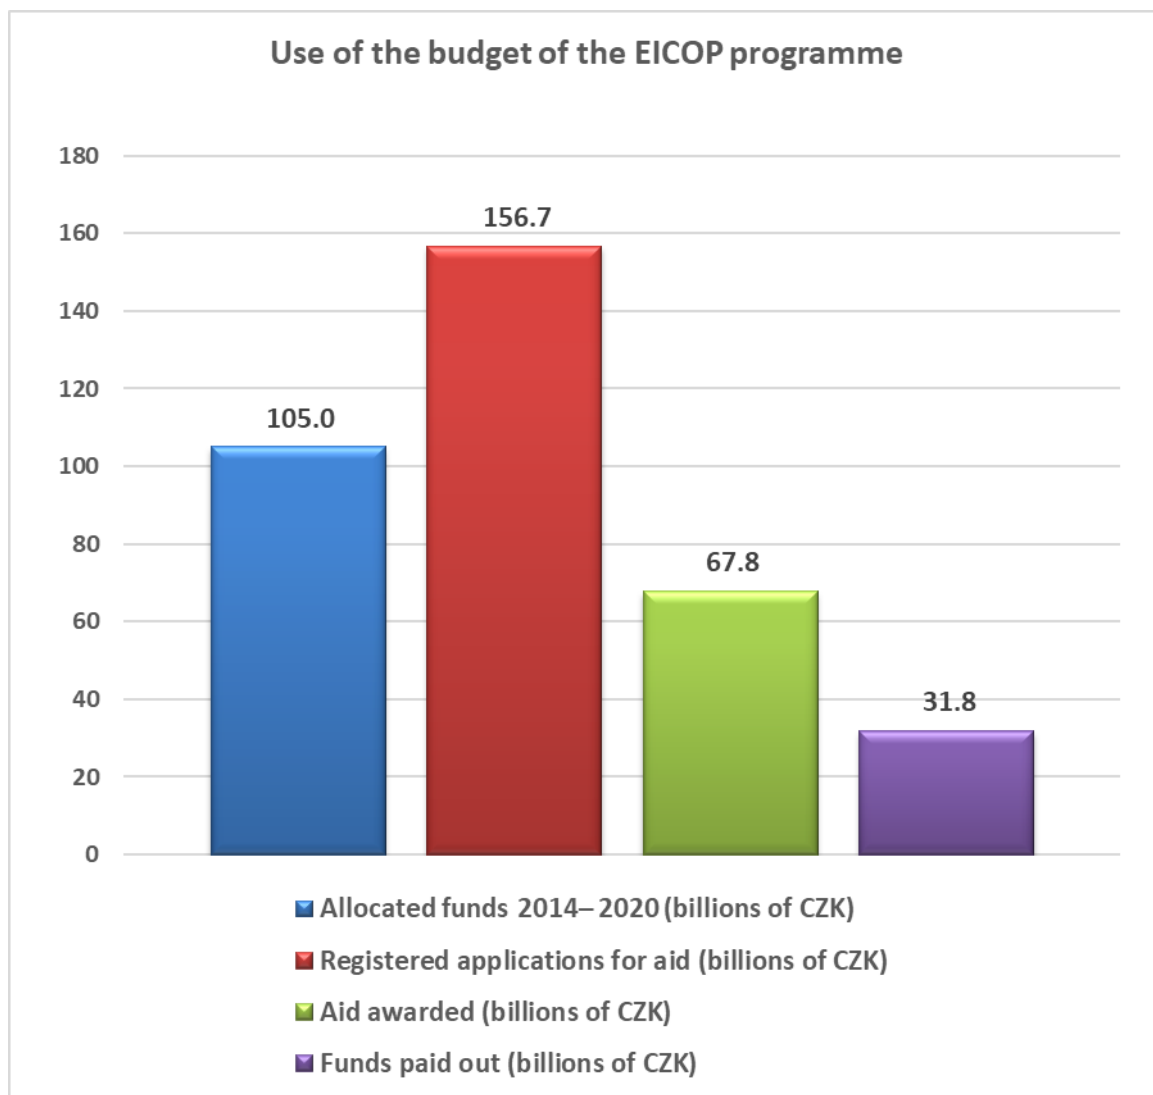

Source: EICOP

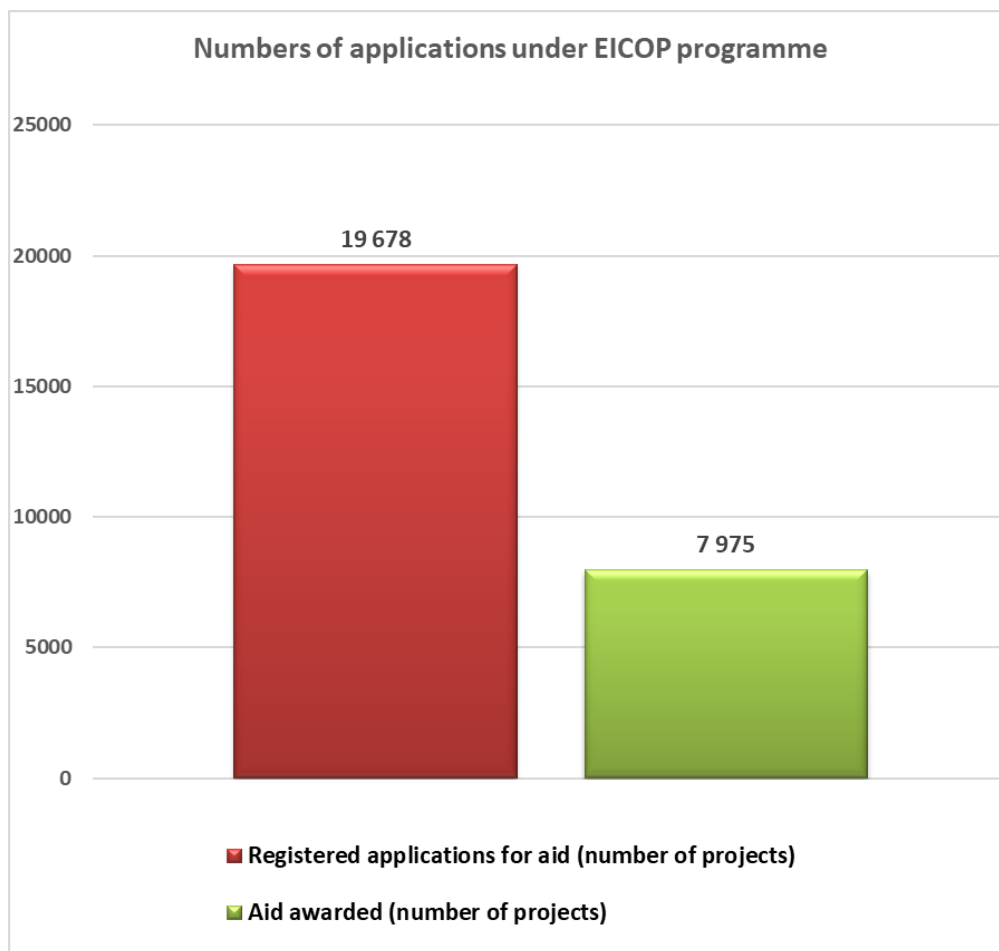

4.1.2 The use of programme funds

As of 31 December 2019, a total of 7957 aid award/transfer legal instruments worth CZK 67.8 billion (EU contribution) had been made under EICOP, i.e. 68.6% of the main allocation. At the end of the second quarter of 2019, CZK 31.8 billion had been paid out, which amounts to 32.2% of the main allocation under the programme. The total amount claimed as of that date was CZK 27.3 billion, which amounts to 27.7% of the main allocation under the programme. The largest proportion of funds awarded is reported under Priority Axis 2: Development of SMEs' entrepreneurship and competitiveness, where the legal instruments cover 93% of the allocation under this axis. By contrast, on the date above the lowest percentage of awarded funds is reported for Priority Axis 4: Development of high-speed internet access networks, and information and communications technologies, where the legal instruments for aid award/transfer cover 36% of the main allocation. The percentages of awarded funds are equivalent in other stages of the award process.

Under Priority Axis 1: Promotion of research and development for innovation, individual factual objectives have been met at 40.9%–49.4%. Under Priority Axis 2: Development of SMEs' entrepreneurship and competitiveness, the factual objective has been met at 45.8%. The factual objective of Priority Axis 3: Efficient energy management, development of energy infrastructure and renewable energy sources, and support for the introduction of new technologies in the management of energy and secondary raw materials, was met at 23.5%. The factual objective of Priority Axis 4: Development of high-speed internet access networks, and information and communications technologies, was met at 55.6%.

4.1.3 Schedule of programme calls

This information is valid as of March 2020.

Priority Axis	Name of call	Planned call announcement date	Planned deadline for applications for aid
Round calls:			
PA 1	7th call of the Infrastructure Services Programme	20/03/2020	30/08/2020
PA 1	7th call, Cooperation – Clusters	22/05/2020	25/09/2020
PA 1	VIII. 4th call of the Application Programme	14/09/2020	15/12/2020
Continuous calls:			
PA 1	2nd call of the Infrastructure Services programme ITI Ostrava	20/04/2020	02/03/2021
PA 1	6th call of the Knowledge Transfer Partnership Programme	01/04/2020	10/09/2020

PA 1	2nd call of the INFRASTRUCTURE SERVICES PROGRAMME-ITI PLZEŇ	17/06/2020	10/02/2021
PA 1	2nd call of the Potential Programme – ITI – Plzeň	18/06/2020	30/09/2020
PA 1	4th call of the Proof of Concept Programme	25/06/2020	30/09/2020
PA 1	5th call of the Innovation Vouchers programme	15/07/2020	30/06/2021
PA 1	7th call Innovation - Innovation project	15/10/2020	29/01/2021
PA 1	7th call of the Knowledge Transfer Partnership Programme	23/11/2020	15/03/2021
PA 2	3rd call of the Technology Programme – ITI Ostrava	28/08/2020	30/11/2021
PA 2	12th call of the Technology for Small Start-up Enterprises programme	14/12/2020	12/05/2021
PA 2	Consultancy - 2nd call - Consultancy for SMEs	27/10/2020	26/02/2020
PA 2	13th call – Technology – Industry 4.0	25/01/2021	26/04/2021
PA 2	1st call of the Venture Capital programme – financial instrument ³⁾	3/2020	2023
PA 3		14/09/2020	25/11/2020
PA 3	6th call under Low-Carbon Technologies – a) E-mobility	14/09/2020	25/11/2020
PA 3	6th call under Low-Carbon Technologies – b) Energy storage	11/09/2020	21/12/2020
PA 3	6th call under Low-Carbon Technologies – b) Secondary raw materials	14/09/2020	25/11/2020
PA 4	6th call under the ICT and Shared Services programme – Digital factory	14/12/2020	15/03/2021
PA 4	ICT and Shared Services call – data centres, shared services centres (their assignment to particular calls will be specified.)	2020	2020

4.2 The Research, Development and Education Operational Programme (RDEOP)

The objective of the Research, Development and Education Operational Programme (RDEOP) is to help shift the Czech economy towards a competitive economy based on a qualified, motivated and creative labour force, high-quality research results and their use. Managing Authority is the Ministry of Education, Youth and Sport of the Czech Republic. In 2020, no more calls will be announced under the programme, as the entire allocation has been awarded.

The areas of action include:

- Supporting equal access to quality education
- Developing competences needed for the labour market and for long-term needs of the society
- Strengthening the capacity for high-quality research and its impact on the society

4.2.1 General information

Priority Axis 1: Strengthening capacity for high-quality research

Interventions under this axis focus on fostering internationally-recognised state-of-the-art research in the Czech Republic, developing research collaboration, improving the infrastructure for training future researchers, advancing the management of research, and societal benefits of research. Priority Axis 1 responds to deficiencies identified in the Czech research system and its research infrastructures, their equipment, utilisation and sharing, the infrastructures for training researchers, multi-disciplinarity of research teams, the involvement of research teams in international collaboration, cooperation between public and private sectors on long-term research themes, the strategic management of research, and the national research policies. All these deficiencies are addressed in four specific complementary objectives.

Priority Axis 2: Development of universities and human resources for research and

development

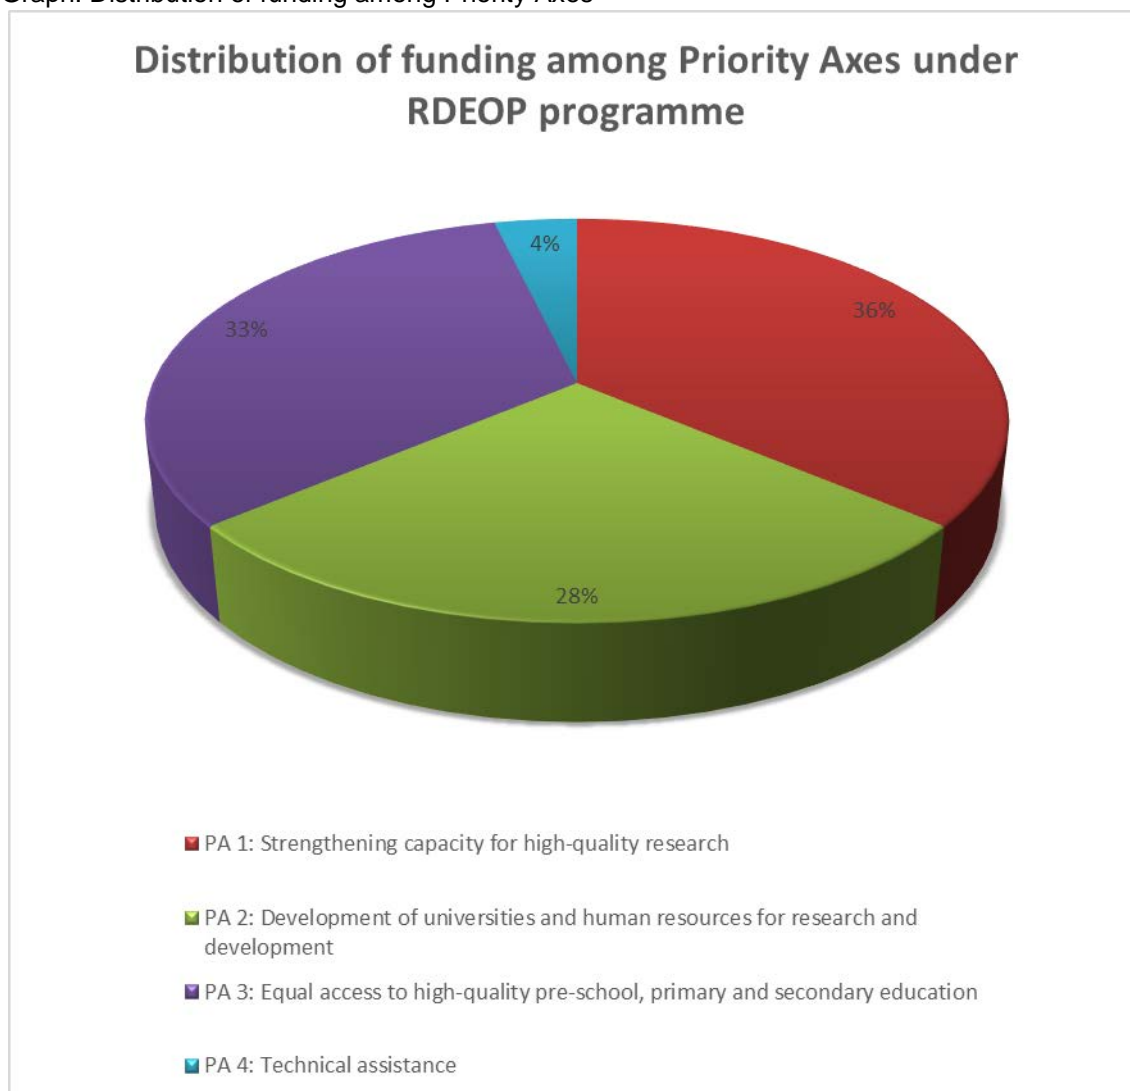

Priority Axis 2 aims to improve the quality and output of higher education institutions, contributing to one of the Europe 2020 priorities, Innovation Union. Quality-oriented measures focus on the relevance of higher education for the labour market and societal needs. Priority Axis 2 also focuses on developing human resources in R&D and the related improvement in conditions for research-linked training. Under this priority axis, funding is provided for individual projects.

Priority Axis 3: Equal access to high-quality pre-school, primary and secondary education

Instead of R&D, Priority Axis 3 focuses on pre-school, primary and secondary education. Its objectives include achieving excellence at all levels of education, supporting every child's and student's potential to develop their competences throughout their life, developing key competences, communication in mother tongue and foreign languages, mathematical competences and basic competences in science and technology, digital competence, learning to learn, social and civic competences, a sense of initiative and entrepreneurship and cultural awareness and expression. Other objectives include improvement in the quality and effectiveness of education and training with the emphasis on their relevance to the long-term needs of graduates, the labour market and society.

The funding for RDEOP according to the financial plan was EUR 3.44 billion. The contribution from the European Fund for Regional Development is EUR 1.52 billion; the one from the ESF reaches EUR 1.25 billion.

Graph: Distribution of funding among Priority Axes

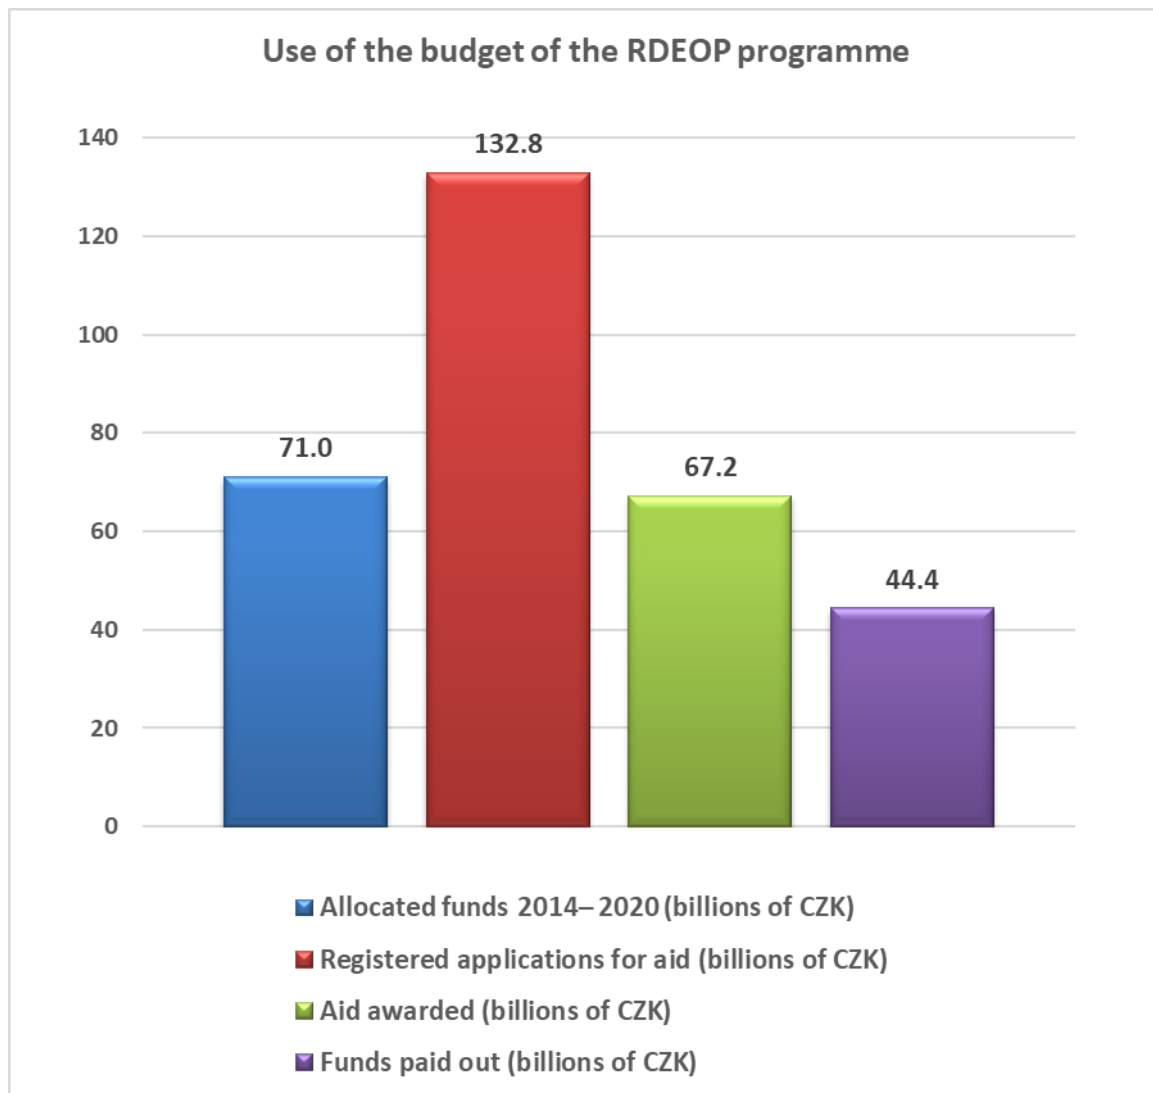

Source: RDEOP

4.2.2 The use of programme funds

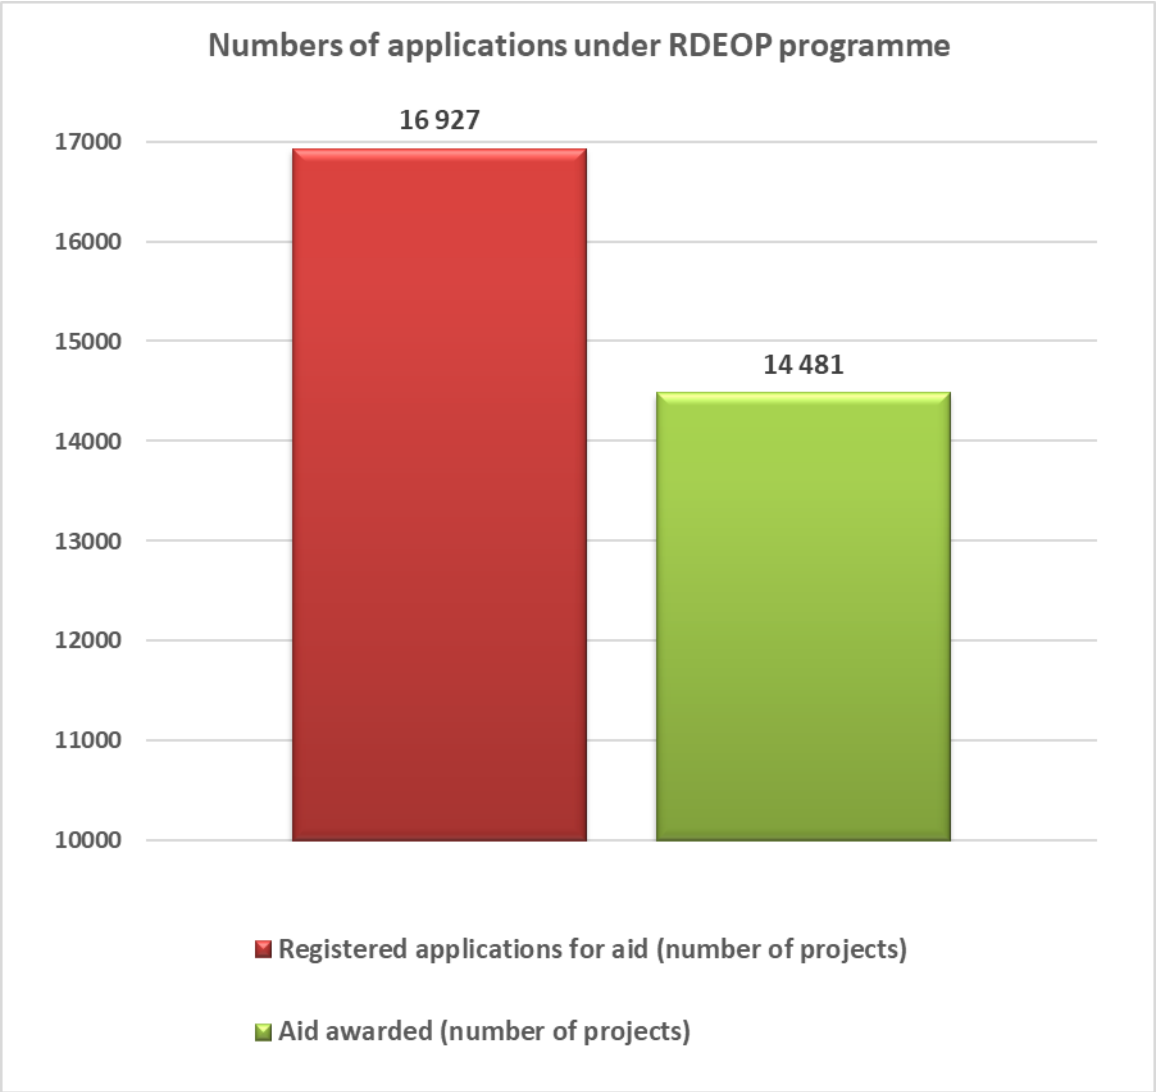

As of 31 December 2019, a total of 14,481 aid award/transfer legal instruments worth CZK 67.2 billion (EU contribution) had been made under RDEOP, i.e., 100.7 % of the main allocation. At the end of the second quarter of 2019, CZK 44.4 billion had been paid out, which amounts to 66.5 % of the main allocation under the programme. The total amount claimed was CZK 25.2 billion, which amounts to 37.8 % of the main allocation under the programme. At the end of the 4th quarter of 2019, applications worth CZK 24.0 billion had been received by the European Commission, which amounts to 35.7% of the main allocation under the programme. The highest proportion covered by the legal instruments is reported for Priority Axis 2: Development of universities and human resources for research and development (EFRR) in the category of less-developed regions, where the contracts amount to CZK 11.7 billion, i.e., 37.4% of the main allocation. As of 31 December 2019, the lowest share of funding covered by legal instruments for aid award/transfer was reported for Priority Axis 3: Equal access to high-quality pre-school, primary and secondary education (ESF) in medium-developed regions: no more than 62.8% of the main allocation.

The lowest completion rate for a factual objective was reported for Priority Axis 2: Development of universities and human resources for research and development, the EFRR fund, in medium-developed regions, where the factual objective “Number of students using newly-built, expanded or upgraded infrastructure, except infrastructures for learning associated with research” was only fulfilled

at 33.1%. The highest completion rate for a factual objective was reported for Priority Axis 3: Equal access to high-quality pre-school, primary and secondary education, where the factual objective “Number of Roma children and pupils in education” was met at 266.6%. This high completion rate was reported even for ss-developed regions. Completion rates for other factual objectives ranged from 35.9% to 202.9%.

4.3 Technology and Applications for Competitiveness Operational Programme 2021-2027 (TACOP)

TACOP (the original working name of the programme was OP Competitiveness) will follow up on EICOP and build on the experience gained in that programme. Its main objectives focus on Industry 4.0 - digitisation and automation, knowledge economy and increased added value, innovative SMEs and transition to a low-carbon and circular economy.

4.2.1 General information and structure

The structure is illustrated in the figure below:

NÁVRH STRUKTURY OP TAK

Priorita	Cíl politiky	Fond	Vybraný specifický cíl dle nařízení k EFRR a FS
Priorita 1 Posilování výkonnosti podniků v oblasti výzkumu, vývoje a inovací a jejich digitální transformace	CP 1	EFRR	SC 1.1 Posílení výzkumných a inovačních kapacit a zavádění pokročilých technologií SC 1.2 Využití přínosů digitalizace pro občany, podniky a vlády SC 1.3 Rozvoj dovedností pro inteligentní specializaci, průmyslovou transformaci a podnikání
Priorita 2 Rozvoj podnikání a konkurenceschopnosti MSP	CP 1	EFRR	SC 2.1 Posílení růstu a konkurenceschopnosti MSP
Priorita 3 Posun k nízkouhlíkovému hospodářství	CP 2	EFRR	SC 3.1 Podpora opatření v oblasti energetické účinnosti SC 3.2 Podpora energie z obnovitelných zdrojů SC 3.3 Rozvoj inteligentních energetických systémů, sítí a skladování na místní úrovni SC 3.4 Posílení biologické rozmanitosti, zelené infrastruktury v městském prostředí a snížení znečištění (čistá mobilita)
Priorita 4 Efektivnější nakládání se zdroji	CP 2	EFRR	SC 4.1 Podpora přizpůsobení se změnám klimatu, prevence rizik a odolnosti vůči katastrofám (průmyslové hospodaření s vodou) SC 4.2 Podpora přechodu k oběhovému hospodářství
Priorita 5 Rozvoj digitální infrastruktury	CP 3	EFRR	SC 5.1 Zvýšení digitálního propojení

EVROPSKÁ UNIE
Evropský fond pro regionální rozvoj

MINISTERSTVO
PRŮMYSLU A OBCHODU

Source: https://www.mpo.cz/assets/cz/rozcestnik/pro-media/tiskove-zpravy/2019/12/09_Nove_programove_obdobi_Juras.pdf

The proposed structure of the programme is built around its specific objectives:

- SO 1.1 Strengthen research and innovation capacities and adopt advanced technologies
 - Support the innovation performance of enterprises and create an innovation “ecosystem”
- SO 1.2 Leverage the benefits of digitisation for citizens, enterprises and governments
 - Intensify the deployment of digital technology and innovation in production and services
- SO 1.3 Foster the skills for smart specialisation, industrial transition and entrepreneurship

- Develop the skills of employees and answer the specific needs of the business sector, namely in digital skills
- SO 2.1 Boost the growth and competitiveness of SMEs
 - Support the creation and development of innovative SMEs, provide easier access to funding for SMEs, introduce elements of Industry 4.0, accelerate internationalization of SMEs and foster business infrastructure
- SO 3.1 Promote energy efficiency
 - Support measures that lead to reduced energy consumption in the business sector
- SO 3.2 Support renewable energy sources
 - Promote effective and environmentally-sound use of renewable energy sources and increase their share in the energy mix
- SO 3.3 Development of smart energy systems, networks and local storage
 - Upgrade and build power systems incorporating smart features
- SC 3.4 Clean mobility
 - Promote sales of alternative fuel vehicles and construction of charging and filling stations in enterprises
- SO 4.1 Industrial management of water
 - Support for sustainable management of water, actions to tackle contamination, solutions for draining and water quality and recycling in enterprises
- SO 4.2 Support transition to circular economy
 - Support infrastructure for extensive recycling of materials in industry and deployment of innovative technologies, and an emphasis on environmentally-sound materials design
- SO 5.1 Enhance digital interconnection
 - Upgrade and expand high-speed internet access infrastructure

Besides grants, other financial facilities will be available for a majority of the specific objectives. The implementation of each particular financial facility will be based on ex ante assessment. The existing guarantee, loan and equity schemes will be complemented with a combination of a financial facility and a grant. Cooperation with the Czech-Moravian Guarantee and Development Bank and EIB Group is expected to continue. The Ministry of Industry and Trade of the Czech Republic prefers a territorially-specific approach, which involves territorially-focused calls (which can be tailored to the economy of the territory) and bonuses for applications (most likely reflecting a market indicator other than unemployment rate as used today).

Financial facility (FF) models:

- **Loan and guarantee FFs** - Building on the favourable experience with the EXPANSION programme (EICOP), the Ministry of Industry and Trade plans to continue programmes which offer favourable loans, loans with financial grant and bank guarantees, in particular for SO 2.1 (boosting the growth and competitiveness of SMEs)
- **Combined loans/guarantees with grants FF** - Objective SO 3.1 (investment in increasing the energy efficiency) is the main area for which MIT envisages new options specified in legislation for the period 2020+ which enables financial facilities to be combined with grants.
- **Venture capital FF with optional grant** - This is envisaged particularly for SO 2.1 (boost the growth and competitiveness of SMEs), SO 1.1 (strengthen research and innovation capacities and adopt advanced technologies) and SO 1.2 (leverage the benefits of digitisation for citizens, enterprises and governments). MIT anticipates that the financial facility will be combined with a grant where this solution is substantiated.

4.3.2 Allocated funds

The Ministry of Industry and Trade has completed the Analysis of Absorption Capacity of Technology and Applications for Competitiveness Operational Programme for the 2021-2027 period. Its conclusions provide a background for estimates of allocations under this programme.

An extensive questionnaire-based survey was conducted on a target group of potential applicants which comprised 1077 businesses. The survey explored the interest of potential beneficiaries in the aid from TACOP for individual specific objectives. The data from the survey were converted to account for the structure of the businesses which had applied for aid in previous programming periods. The interest in projects as identified by the survey amounted to CZK 222.3 billion in total eligible costs. After the anticipated aid rates for specific objectives and technical assistance allocation had been accounted for, the final absorption capacity of TACOP in the form of a subsidy from the EFRR fund was found to be CZK 108.2 billion.

As part of the process of preparation of operational programmes for the 2021-2027 period, the Ministry of Regional Development drafted a scheme for the distribution of 75% of the funds allocated from EFRR among these operational programmes (TACOP, JAKOP, TOP, EOP and IROP). To date, EUR 7.2 billion has been allocated, i.e., CZK 184.5 billion. Technology and Applications for Competitiveness Operational Programme was allocated CZK 72.3 billion, which amounts to 39.2% of the funds from EFRR allocated so far.

The funding allocated to TACOP is insufficient across all cohesion policy targets relevant to the programme (CP1, CP2 and CP3) with respect to the absorption capacity found. In the preparation stage for the 2021 – 2027 programming period, 25% of the EFRR fund allocation is to be distributed, which amounts to EUR 2.4 billion or CZK 61.5 billion as of the date of completion of the Analysis. If MRD maintains the same percentage proportion (i.e., 39.2% for TACOP) for allocating the remaining funds, the TACOP programme will be allocated CZK 24.1 billion. In total, the allocation for TACOP would amount to CZK 96.4 billion which, however, fails to cover the pre-determined absorption capacity (CZK 104.4 billion excluding technical assistance). Therefore, the possibility of increasing the TACOP share in the allocation of the remainder of the EFRR fund should be considered, even if at the expense of the other programmes funded from EFRR. The goal would be to bring the allocated funding close to the TACOP absorption capacity.

The document outlines the identified barriers for the recipient. They include high co-funding requirements on the businesses, the burden of administration, lack of labour force in the market and poor awareness of available aid among businesses.

All this information is available at: <https://www.mpo.cz/cz/podnikani/dotace-a-podpora-podnikani/opik-2014-2020/>

4.4 Jan Amos Komenský Operational Programme 2021-2027 (JAKOP)

The aim of the Jan Amos Komenský Operational Programme is to help develop an open and well-educated society based on knowledge, skills, equal opportunities and development for every individual.

JAKOP is based on the national policy for education, research and development and follows on from the successful RDEOP programme. The experience acquired under RDEOP, the areas which received aid under the programme and the mechanisms which have been created form the foundations for JAKOP, a programme that continues to deepen and strengthen the favourable effects of previous interventions and changes in education, research and development.

4.4.1 General information and structure

The Czech Republic lags behind world leaders in research, development and innovation, as it falls in the category of “moderate innovators”. The support for research and development must aim at developing state-of-the-art resources (human resources as well as infrastructure), fostering the knowledge potential available to Czech facilities, focus on current and future societal challenges and building a base for the future applicability of results of research and development in practice. This is the only path which can make the Czech economy competitive against developed countries. Support for excellence and high-quality research and development is particularly important in those areas which have the potential to contribute to the further development of society and the economy and address societal challenges on both national and European levels, making the Czech Republic more

competitive. Interventions in research, development and education are essential in exploiting the knowledge potential and securing a prosperous future.

The structure of JAKOP reflects priority themes funded from EU Structural Funds in the 2021-2027 programming period:

- Research and development - a priority axis focused on policy objective 1: A smarter Europe - innovative & smart economic transformation,
- Education - priority axis focused on policy objective 4: Improved social environment in Europe through execution of the European Pillar of Social Rights,
- Priority axis for technical assistance.

Throughout 2019, the Ministry of Education developed programme documents and other sources to be discussed with the Ministry's partners, the professional public and interest groups. In 2020, the proposal of the Jan Amos Komenský Operational Programme is to be submitted to the Czech government and discussions with the European Commission will take place so that the programme can be launched. The interventions were designed with the emphasis on continuity with the RIS3 strategy – greater verticalization, targeted interventions (top-down approach for some intervention as opposed to the bottom-up approach under RDEOP) and targeting of some activities exclusively at priority areas (e.g., new building constructions).

The priorities for research and development are as follows:

- up-to-date attractive motivating institutional environment in research organisations,
- opening up the research area in the Czech Republic to international cooperation,
- greater involvement of Czech research organisations in international initiatives and programmes,
- increasing the number of excellent research teams,
- high-quality infrastructure that meets the needs of state-of-the-art research,
- stronger collaboration between research organisations and industrial partners,
- improving the potential and capabilities in the application of research results in practice,
- creating an environment for implementing the “open science” concept (Open Access, EOSC, aggregation, search and analytical instruments for linking separate information sources to meet RDI needs),
- increasing the visibility of the Czech Republic on the global scale as a country with a strong research and innovation potential making it attractive for highly-qualified creative and talented people and investors, boosting the interest of society in research and technology trends.

The programme will offer co-funding for projects which were awarded aid from specific implementation instruments of Horizon Europe (2021-2027) requiring financial contribution from participating countries, co-funding for high-quality projects submitted to Horizon Europe (2021-2027) which were rejected on the grounds of lack of funding from the European Commission, and support for actions synergetic with Horizon Europe.

4.4.2 Allocated funds

The EU co-funding rate and related national co-funding rules are among the main factors which dictate the absorption capacities of individual subject areas, and in turn the structure and set-up of the operational programme.

The 2021-2027 programming period will see two changes which will have a negative impact on the use of EU funds in the Czech Republic:

- Reduced rate of co-funding from the EU by 10% in developed regions (leading to final rates of 40% EU co-funding and 60% co-funding by the Czech Republic) and 15% in the other regions (at a 70:30 ratio in less-developed regions and 55:45 in transition regions).

- In addition, three regions will shift from the less-developed category to the transition category. Consequently, three regions (Central Bohemia, South-West and South-East) will experience a slump in co-funding from the EU.

As part of the process of preparation of operational programmes for the 2021-2027 period, the Ministry of Regional Development drafted a scheme for the distribution of 75% of the funds allocated from EFRR and ESF+ among these operational programmes (TACOP, JAKOP, TOP, EOP and IROP). The Jan Amos Komenský Operational Programme was allocated CZK 40.9 billion, of which CZK 21.7 billion was from EFRR and CZK 19.2 billion from ESF+. The ESF+ allocation was distributed as 60% for E+OP and 40% for JAKOP. The total preliminary allocation of the programme is CZK 54.5 billion, unless there are changes to the remaining 25% allocation.

More information will be available at <https://opvvv.msmt.cz/2021-plus>.

5. INTERNATIONAL COOPERATION OF CZECH REPUBLIC IN RESEARCH AND DEVELOPMENT IN THE CONTEXT OF EU TOOLS

The fundamental instruments used by the EU for funding research, development and innovation on the European level are framework programmes. The approved budget of Horizon 2020 (H2020) for 2014–2020 Horizon 2020 (H2020) is EUR 77.028 billion and the budget of EURATOM is EUR 1.603 billion.

The Czech Republic sees as one of its priorities in international cooperation its engagement in the research and development structures of the European Union (European Research Area). This means, above all, effective participation in EU framework programmes of research and development, and in the EURATOM programme.

Czech research organisations still struggle in terms of their success rate in FP8 and in winning aid and therefore rank below the average in international comparison.

General priorities include developing, structuring and strengthening the European Research Area (Ljubljana Process), realizing the Europe 2020 strategy (achieving competitiveness comparable with the USA and Japan), and meeting the Barcelona objective (European R&D expenditures of 3 % of GDP). Other important efforts include multilateral and bilateral projects, and participation in international governmental and non-governmental organisations and activities.

5.1 Horizon 2020

The Seventh Framework Programme of the EU, the predecessor of Horizon 2020, ran from 2007 to 2013 (some of its projects can continue until 2017). In the 2011–2013 period, the draft of the Horizon 2020 framework programme was being prepared and discussed. It was approved by the EU Council on 3 December 2013. Its budget is EUR 77 billion. As the programme enters its final stage, the follow-on Horizon Europe programme is being prepared. Analyses compiled by the European Commission and the Technology Centre AS CR reveal that the Czech Republic remains in the group of member states least involved in this framework programme. Under H2020, the country was able to secure EUR 277 million (CZK 7.3 billion) with its overall project success rate of 14.6%, whereas its neighbour Austria gained EUR 1179 million (i.e., CZK 31.3 billion) at an overall success rate of 16.7% (end of 2018).

Main priorities of H2020

H2020 focuses on three priorities:

- Excellent science
- Industrial leadership
- Societal challenges

The H2020 budget also covers these efforts and initiatives:

- Non-Nuclear actions of the Joint Research Centre
- European Institute of Innovation and Technology
- Science with and for society
- Spreading excellence and widening participation

The budget of H2020

The budget of the H2020 programme was approved at EUR 77.028 billion with the structure given in the following table: Complementary to H2020 is the EURATOM programme, whose overall budget for the 2014–2018 period is EUR 1.603 billion.

Approved H2020 budget in millions of EUR

Priority	Budget in millions of EUR	Proportion allocated
A. Excellent science	24,441	31.73%
B. European industrial leadership	17,016	22.09%
C. Societal challenges	29,679	38.53%
EIT	2,711	3.52%
Science with and for society	462	0.60%
Spreading excellence and widening participation	816	1.06%
Non-nuclear direct actions of the Joint Research Centre	1,903	2.47%

Schedule of calls

Czech calls under the H2020 programme are available at:

<https://www.h2020.cz/cs/seznamy/vyzvy>

Further information can be found at these addresses:

<https://www.evropskyvyzkum.cz/cs/nastroje-spoluprace/ramcove-programy/horizont2020>

<https://www.h2020.cz/cs>

<https://www.h2020.cz/files/svobodova/TCAV-brozura-Horizont-2020-web.pdf>

5.1.1 Horizon 2020-related initiatives

The H2020 budget is used for additional horizontal activities – Spreading excellence and widening participation; Science with and for society – as well as non-nuclear activities of the Joint Research Centre EK and the European Institute of Innovation and Technology.

Spreading excellence and widening participation

The objective of these actions is to help overcome significant disparities between Member States or regions in terms of fostering and exploiting the research and innovation potential, and to promote participation in the H2020 programme to uniformly spread excellence in research across the European Research Area. “Spreading excellence and widening participation” is based on four measures: Teaming; Twinning; ERA chairs; and the Policy Support Facility.

A new feature of Horizon 2020 is the Seal of Excellence principle, according to which the outcomes of evaluation under individual implementation schemes of Horizon 2020 are adopted by another funding provider and funding is awarded to those proposals which have received favourable rating but no funding from the European Commission due to Horizon 2020 budget constraints. Although the Ministry of Education of the Czech Republic has been following this principle for a long time for European Research Council projects and began to adopt it in 2017 for individual international mobility projects under Marie Skłodowska-Curie Actions, it is still an exception in the Czech Republic where it has not been widely used (e.g. the SME Instrument). Yet, its benefits are considerable. More widespread application of the Seal of Excellence principle may even increase the frequency of Horizon 2020 proposals from Czech applicants. Funding providers who have the potential to adopt the Seal of Excellence principle should therefore make effort to use it in their grant programmes.

Further information can be found at this address:

<https://www.h2020.cz/cs/eit-jrc-horizontalni-aktivita-euratom/sireni-excelence-a-podpora-ucasti/informace>

Science with and for society

The aim of this activity, which directly builds on Science in Society, a priority under the 7th Framework Programme, is to build a fruitful relationship between science and society, to recruit new talent for science, and to pair scientific excellence with social awareness and responsibility.

“Science with and for society” comprises the following themes: scientific and technological careers (EURAXESS); gender equality; formal and informal science education; open access and the use of results; governance and ethics; responsible research and innovation; and science communication

Further information can be found at this address:

<https://www.h2020.cz/cs/eit-jrc-horizontalni-aktivita-auratom/veda-se-spolecnosti-a-pro-spolecnost/informace>

Teaming – a specific measure under Horizon 2020 EU framework programme for research and innovation

The instrument for international collaboration in R&D entitled “Teaming” is one of the implementation schemes under Horizon 2020, the EU framework programme for research and innovation (Horizon 2020), which plays a role in the area “Spreading excellence and widening participation”. Teaming is one of the measures which aim to reduce persistent disparities in the research and innovation performance of various EU member states and should unlock R&D potential and excellence across the European Union.

Teaming complements other Horizon 2020 measures in this category of support actions: Twinning (strategic collaboration between a research organisation from an EU member state with substantially lower innovation performance and at least two leading foreign research institutions from EU member states with higher innovation performance), ERA Chairs (development of a research institution through the transfer of good practice from visiting leading experts) and the services provided by the European Commission via the Policy Support Facility, involving the support for creation, implementation and evaluation of RDI policies.

The ultimate goal of Teaming is to establish or substantially upgrade R&D facilities in EU states with considerably lower innovation performance than that of the EU states which are home to excellent foreign R&D institutions acting as partners under this measure. Teaming projects are an excellent opportunity to improve the effectiveness of the R&D system in the Czech Republic through the adoption of good practice from abroad. Teaming projects may even boost the participation and success rate in international funding schemes, most notably Horizon 2020, and internationalise the research and innovation system of the target EU member state.

In the Czech Republic, funding synergies were achieved using ESIF funds provided through the Research, Development and Education Operational Programme. These covered infrastructure investment, equipment and, if relevant, other costs which are ineligible under Horizon 2020. To this end, a specific dedicated call was announced. The European Commission then provides aid from the Horizon 2020 budget for non-investment costs of relevant projects (those which succeed in the second round of evaluation).

5.2.2 Programmes under Art. 185 initiatives

Following ERA-NET and ERA-NET Plus, the initiatives based on Article 185 of the Treaty on the Functioning of the European Union (ex Article 169 of the Treaty establishing the European Community) represent a higher level of coordination of research programmes. They integrate entire national research programmes, including their management and funding, and even generate joint calls for proposals. In order to jointly realize such an initiative, a new implementation structure must be created to deal with the responsibility for managing the joint programme and its financial matters. Under Article 185 and Horizon 2020, four joint programmes are under way which were already running under FP7 (approved by the European Parliament and EU Council on 15 May). A proposal for resuming the fifth one (BONUS - Joint Baltic Sea Research Programme) is to be made later.

- **AAL2** – Active and Assisted Living Research and Development Programme – the Czech Republic is not involved
- **EMPIR** European Metrology Programme for Innovation and Research (a long-term scheme for high-quality joint research and development within the metrology community in Europe) – the Czech Metrology Institute
- **EDCTP2** European and Developing Countries Clinical Trials Partnership 2 is devoted to new treatments of conditions related to poverty – the Czech Republic is not involved

- **Eurostars2** joint programme of EUREKA and the EU focused on the international collaboration of SMEs which conduct research and development along with their business activities: Ministry of Education of the Czech Republic

EMPIR

The European Metrology Programme for Innovation and Research was made part of the Horizon 2020 framework programme by the applicable Commission Regulation. The EMPIR programme follows on the successful European Metrology Research Programme (EMRP) under FP7. Like EMRP, EMPIR is managed by EURAMET, the European Association of National Metrology Institutes whose membership comprises metrology institutes from 28 Member Countries. EURAMET focuses on consolidating research activities in the field, preventing their overlaps, and achieving the critical mass for research progress. There is an increased focus within EMPIR on specialized modules concerning industrial research and utilisation, the support of technical standardisation, and creation of essential elements of the metrology infrastructure. On EMPIR and EURAMET, the Czech Republic is represented by the Czech Metrology Institute. Associate members are the Czech Hydrometeorological Institute, the Institute of Photonics and Electronics of the Academy of Sciences of the Czech Republic, and the Research Institute of Geodesy, Topography and Cartography.

Further information can be found at these addresses:

www.msmt.cz/vyzkum-a-vyvoj-2/empir-8b

www.h2020.cz/cs/eit-jrc-horizontalni-aktivita-euratom/souvisejici-iniciativy/clanek-185

EUROSTARS 2

Under this scheme, support is provided according to the rules of EUREKA programmes. Its predecessor, the EUROSTARS programme was officially announced on 2 October 2007. The EUROSTARS2 programme, part of Horizon 2020, began in 2014.

Together with other European Community programmes, it targets small and medium-sized enterprises which pursue research and development alongside their principal activity. This programme supports new projects carried out by international consortia for the benefit of small and medium enterprises collaborating among themselves or with research institutions and large companies. It aims at European SMEs, especially those with high growth potential. The purpose is to generate new market opportunities and activities based on R&D results. The programme supports new products, technologies and services to enable their fast launching.

The EUROSTARS2 programme currently associates 33 Member Countries. The Czech Republic was one of the founder states. The primary contact and information point for the EUROSTARS2 programme is the EUREKA National Programme Coordinator.

Further information can be found at these addresses:

www.eurostars-eureka.eu

www.msmt.cz/vyzkum-a-vyvoj-2/program-eurostars-2-7d

5.2 Horizon Europe 2021-2027

For the next long-term budget of the EU for 2021-2027, the Commission has proposed allocating €100 billion for research and innovation. The ambition of Horizon Europe, a new programme, is to build on the success of the soon-to-end Horizon 2020 and keep the EU at the forefront of global research and innovation efforts. Horizon Europe is the most ambitious research and innovation programme yet - its allocation is higher than for H2020 by approximately EUR 23 billion. No substantial changes in the programme's focus or its instruments are planned, as it should follow on from the current policy and expand the support.

The framework programme Horizon Europe will respond to the interim evaluation of H2020. Member states outlined their ex ante priorities in relation to the future shape of Horizon Europe framework

programme in their national positions responding to the interim evaluation of Horizon 2020. The Czech position was communicated in May 2017.

In the 2021–2027 period of the Multiannual Financial Framework of the EU, Horizon Europe will be the fundamental instrument for supporting research, development and innovation in the EU and is intended to substantially contribute to stronger cooperation among EU member states within the European Research Area and to international cooperation with associated states which elect to join the framework programme.

Horizon Europe will support research, development and innovation in the EU with EUR 97.6 billion between 2021 and 2027 (of which EUR 3.5 billion will be committed to the InvestEU fund) and a further EUR 2.4 billion for the EURATOM professional qualification programme between 2021 and 2025 (Under Article 7 of the EURATOM Treaty, EURATOM programmes for research and professional qualification may not be scheduled to run for more than five years. Normally, their period is then extended by adopting a follow-on programme the period of which matches the remaining period of the framework programme).

Funds from Horizon Europe will go toward excellent research in the public sector, commercialization of scientific knowledge and support of breakthrough innovation in the business sector. Emphasis will be placed on knowledge transfer from the research sector to industry to make commercial use of knowledge capital through developing high-added-value goods and services. In addition, there will be efforts to ensure that research and innovation activities adequately reflect the socioeconomic needs of European society.

Horizon Europe is designed as part of the Multiannual Financial Framework of the EU for 2021–2027 and as a instrument which is complementary to and synergetic with other EU policies. It also reflects the EU's priorities in digitisation and industrial transition (Industry 4.0, Digital Single Market), power generation, low-carbon economy and natural resources (Energy Union) and environmental protection, food sustainability, health of the population and security. Horizon Europe should help Europe to contribute to the UN's Sustainable Development Goals and to meet its obligations under the Paris Climate Agreement.

Horizon Europe follows on from Horizon 2020 and brings the following new aspects:

- European Innovation Council – financial support for high-risk breakthrough innovation which can generate new market opportunities.
- New research and innovation goals (missions) across the entire EU – these goals will focus on societal and economic challenges faced by individual countries. Their definitions will be developed with contributions from citizens, stakeholders, member states and the European Parliament.
- Maximizing the innovation potential across the EU.
- Greater openness – the principle of “open science” with open access to data and publications.
- A new generation of European Partnerships and broader interaction with other EU programmes.

5.2.1 Structure of Horizon Europe

The framework programme Horizon Europe will comprise three pillars and one specific part (Strengthening the European Research Area). Except for this specific part and non-nuclear actions of the Joint Research Centre, the European Commission will be allowed to depart from the budget allocations each year by no more than 10%.

- **Pillar 1 Excellent Science (EUR 25.8 billion)**

Excellent research is a prerequisite for the development of a knowledge-based society and the economy of the EU. Ultimately, the competitiveness of European enterprises and the EU as a whole hinges on state-of-the-art research infrastructure which delivers breakthrough findings applicable to innovative products and high-added-value services. The first pillar of Horizon

Europe will focus on supporting excellent research, development of human capital, i.e., the careers of researchers in science, and state-of-the-art research infrastructure. The first pillar will be implemented using the bottom-up principle.

- **European Research Council (EUR 16.6 billion EUR)**
- **Marie Skłodowska-Curie Actions (EUR 6.8 billion)**
- **Research infrastructures (EUR 2.4 billion)**

- **Pillar 2 Global Challenges and European Industrial Competitiveness (EUR 52.7 billion)**

The approach of addressing socioeconomic challenges of European society through knowledge-based solutions cannot be used exclusively in the research sector. It should naturally encompass the innovation domain, i.e., generally all stakeholders from the education, research and innovation environment, as well as the public and private sectors and broad civil society, i.e., both scientists and innovators and “end users” from among citizens. The second pillar of Horizon Europe will therefore be implemented through clusters in which platforms for partnership among all stakeholders will be established. Priority themes will be specified according to the top-down principle. Implementation instruments will include missions, i.e., time-bound problem-oriented multidisciplinary research-innovation initiatives providing coordination between stakeholders, with clearly-defined goals, a time schedule with milestones, and a specified socioeconomic impact.

 - **Health cluster** (EUR 7.7 billion)
 - **Inclusive and Secure Societies cluster** (EUR 2.8 billion)
 - **Digital and Industry cluster** (EUR 15 billion) The funding will focus on strengthening the competences of the EU in Key Enabling Technologies which are crucial for keeping European industry globally competitive. Priorities will include digitisation of the European economy, robotization of industrial production, the deployment of artificial intelligence, and related expansion of computation capacity and internet and the development of new and advanced materials. Last but not least, sustainability of industrial production in terms of raw materials and low-carbon operation to mitigate the burden on the environment will be one of the thrusts. A special theme is the development of space technologies and applications.
 - **Climate, Energy and Transportation cluster** (EUR 15 billion) These themes include environmentally-sound development of the energy and transport infrastructure. Support will be provided for research into energy generation, transmitting and storage, effective management of energy sources in residential areas (smart cities) and industrial production (smart industries) and the development of environmentally-friendly solutions for transportation (smart mobility). Climate change is another priority theme, including its dynamics and related issues in terms of understanding its causes and analysis of the related risks and minimization of its impact.
 - **Food and Natural Resources cluster** (EUR 10 billion)
 - **Non-Nuclear actions of the Joint Research Centre** (EUR 2.2 billion)

- **Pillar 3 Innovative Europe (EUR 13.5 billion)**

Exploitation of the research potential regarding innovative products and high-added-value services remains a challenge for the European Research Area. The third pillar will focus on knowledge transfer, transfer of human resources from the research to the business sector, the development of start-ups, providing access to venture capital for innovators and bringing European financial facilities for innovation support together under a single institution. It aims to help bridge the commercialization valley of death for research results and strengthen innovation processes in the manufacturing sector with the emphasis on small and medium-sized enterprises and start-ups (the number of dynamically growing start-ups – unicorns – is almost five times less in Europe than in the USA).

- **European Research Council (EUR 10 billion)**
- **European Innovation Ecosystems (EUR 0.5 billion)**
- **European Institute of Innovation & Technology – EIT (EUR 3 billion)**
- **Specific part “Strengthening the European Research Area” (EUR 2.1 billion)**
 The weak spot of the European Research Area is the insufficient volume of public investment in research, development and innovation. The European average is below the desirable 3% of GDP and the growth is slower than in other regions of the world. The European Research Area also faces substantial variations in the research and innovation performance of individual member states and structural deficiencies in their national research and innovation systems, which call for numerous reform measures. The specific part of the framework programme “Strengthening the European Research Area” is outside the three main pillars and focuses on tearing down the barriers which hinder full exploitation of the research and innovation of all EU member states. In spite of the clear theme of cohesion in the relevant part of the framework programme, excellence should remain the key principle of the support for projects and implementation of instruments for strengthening the European Research Area. This part of the programme will include tools aimed at the infrastructure base for excellent science in EU states which participate on a smaller scale, as well as tools for cooperation among research teams from EU-13 member states and EU-15 member states. There will also be tools which support reforms at the level of individual research institutions and country-wide innovation systems.
- **Sharing excellence (EUR 1.7 billion)**
- **Reforms and enhancement of European research and innovation system (EUR 0.4 billion)**

You can follow updates at:

<https://www.evropskyvyzkum.cz/cs/nastroje-spoluprace/ramcove-programy/9-rp>

5.3 European Research Area (ERA)

The European Research Area (ERA) was established by the European Council to create a unified European environment for research and development, to improve cohesion in this area, and to improve European competitiveness with the United States and certain Asian countries. It was a response to the steadily decreasing spending on European research and development, namely private investment in research, the low attractiveness of careers in science or research, the declining or inadequate share of women in research, the insufficient use of research resources for the benefit of society, and the low mobility of European research workers. An added factor was the absence of coordinated support of large research infrastructures, which contribute to excellence of science in Europe, and recurrent problems related to science ethics (e.g. stem cell research). The European Research Area was a step towards tackling these issues.

In 2011, the Ministry of Education of the Czech Republic saw major changes in the way international cooperation in R&D was managed and the way the country participated in the European Research Area. The Department of International Cooperation in R&D was established with responsibility for the Czech Republic's membership in the ERA (including participation in and evaluation of framework programmes). In addition, the Department of Funding Research and Development Projects was formed to oversee the implementation of bilateral and multilateral R&D international cooperation agreements, and the funding of the applicable cooperation programmes. Since 2013, the Research and Development Department and the Department of Support of Higher Education Institutions and Research of the Ministry have been operating. They are responsible for international cooperation, funding, and participation of the Czech Republic in the ERA.

The ERA includes EU Framework Programmes, national policies and research programmes of EU Member States, and their coordination, as well the operation of European research organisations and their infrastructure. Framework programmes are therefore designed and launched with the objective to

promote the formation and structuring of the ERA. The aim is to improve quality of life in the EU and Europe through efficient use of investment in R&D (public and private investment, and private/public partnerships – PPP), improved performance of research and development, and better research infrastructure.

Information on and documents concerning the European Research Area can be found on the European Research portal <https://www.evropskyvyzkum.cz/cs/cr-a-era>

5.3.1 ERA-NET PLUS

The ERA-NET and ERA-NET PLUS programmes are jointly implemented by participating countries with contributions from the EU, e.g. through harmonized work programmes, joint or coordinated calls for proposals, joint evaluation procedures and joint implementation of projects. The purpose of projects of the ERA-NET-type is to link national and regional research programmes to bring them closer, and to develop and pursue joint activities. The ERA-NET scheme was launched already as part of the 6th Framework Programme (FP) as one of the tools strengthening the coordination of national and regional research policies in the EU. In the 7th Framework Programme, the scheme continued successfully, both in the form of new ERA-NET activities, the existing ones that started in the 6th FP and as their upgraded versions on the ERA-NET Plus level. The ERA-NET scheme is now one of the tools of the Horizon 2020 programme.

The ERA-NET Plus scheme started under FP7 as a support tool for selected projects which receive an additional bonus from the European Commission to announce joint calls. ERA-NET Plus supports initiatives that deepen the collaboration in given fields through joint research programmes, and enables them to translate into initiatives within the definition of Article 185 of the Treaty on the Functioning of the European Union. As in ERA-NET projects, the eligible participants of ERA-NET Plus projects are only programme managers and programme owners. However, under this scheme, they must have already created their own research programme.

The Ministry of Education will support the participation of Czech organisations in ERA-NET Cofund partnerships (in alignment with other specific-purpose funding providers as eligible participants in these partnerships) but the emphasis in terms of budget will be laid on the Czech participation in Art. 185 and 187 TFEU initiatives and Joint Programming Initiatives, as those have the greatest degree of integration and coordination in the sphere of R&D programmes funding in the EU.

5.3.2 QUANTERA

QuantERA: ERA-NET Cofund in Quantum Technologies is a network of 32 agencies from 26 countries coordinated by the National Science Centre in Poland. It aims to support European research consortia involved in long-term research into quantum technologies under the ERA-NET Cofund system of the European Union. Quantum technologies have become a new and rapidly developing area of research which opens up radically new modes of quantum information processing and communication. They promise to give rise to new approaches in many fields of science and technologies by using specific quantum effects. QuantERA is supported by the European Union in the scope of FET (Future and Emerging Technologies), whose mission is to exploit the potential of an excellent European research base to gain a technological head start thanks to technological breakthroughs. QuantERA aims to unlock the widely-recognized industrial potential of quantum technologies to meet current societal needs and deliver benefits for the general public.

As with other EU-level tools, the main goal of QuantERA: ERA-NET Cofund in Quantum Technologies is to strengthen international cooperation, define a Europe-wide approach and initiate transnational co-funding of quantum technology research. Furthermore, the network strives to support international research projects co-funded by the European Commission, boost European research, develop reliable technologies, identify new opportunities and strengthen Europe's competitive advantage and its leading position in the field. In addition, it aims to support various research facilities which can demonstrate capabilities in the most demanding novel areas of research.

QuantERA: ERA-NET Cofund in Quantum Technologies is one of the initiatives which promote excellent research in the European Research Area. In November, the European Commission issued the communication “QuantERA ERA-NET Cofund in Quantum Technologies” with detailed information on quantum technology projects (i.e. the objectives, coordinator, the countries involved and other relevant information). Countries can get involved on the basis of their preferences and capacities.

Further information can be found at this address:

<http://www.msmt.cz/vyzkum-a-vyvoj-2/quantera-1>

5.3.3 E-RARE

The Ministry of Education of the Czech Republic takes part in the joint transnational call on rare diseases under ERA-Net Cofund (E-Rare-3: 2014-2019), which was launched by the E-Rare consortium in 2017. A rare disease, according to the EU definition, is one which affects fewer than 5 in 10,000 people. The Czech Association for Rare Diseases estimates that there are between 600 thousand and 800 thousand rare disease patients in the Czech Republic, whereas the number for the European Union is more than 30 million.

There are over 8,000 rare diseases and new ones continue to be discovered. Special health care is required to fight rare diseases. It is strategically desirable for healthcare policies to support this concept because knowledge sharing between research teams in Europe can provide rare disease patients with access to high-quality healthcare. The main purpose of the E-Rare initiative is to plan and publish transnational calls for this research field on a regular basis.

Further information can be found at these addresses:

<http://www.msmt.cz/vyzkum-a-vyvoj-2/era-net-e-rare>

<http://www.erare.eu/>

5.3.4 EuroHPC

The Czech Republic joined EuroHPC on 24 January 2018 by signing the Declaration on Development of Cooperation on High-Performance Computing (HPC). The EuroHPC initiative stems from the Declaration on Cooperation on HPC which was signed on 23 March 2017 in Rome. The initiative aims to develop two pre-exascale and two exascale supercomputer systems in Europe to boost the continent's global competitiveness in HPC technology. EuroHPC will be implemented via joint undertakings established under Article 187 of the Treaty on the Functioning of the European Union. Its articles of association are being debated by the programme preparation bodies of the EU Council for Competitiveness which brings together government ministers responsible for research. The joint undertaking for EuroHPC is intended to combine the fragmented streams of public funding for HPC development provided across multiple implementation schemes of Horizon 2020. The goal of the initiative is to place Europe among the top three leaders in the development of HPC technologies in the next decade. The strategic objective of the initiative is to improve the ability of European businesses to develop world-class supercomputing equipment to make the European HPC infrastructure independent of non-European suppliers.

Further information can be found at this address:

<https://eurohpc-ju.europa.eu/>

5.4 EURATOM

The EURATOM programme was launched for the 2014–2018 period (however, calls continue beyond 2018) as a research programme complementary to and integrated into Horizon 2020, having a total budget of EUR 1,603 million. It sets out objectives of research and development activities and specifies their support tools. The overall aims of the programme include research into, and specialist training in continuous improvement in nuclear safety, security and radiation protection, as well as safe decarbonisation of the energy system.

Specific objectives of indirect actions focus on nine areas:

- Support of safety of nuclear systems
- Solutions for the long-term disposal of final nuclear waste
- Development and maintenance of expert knowledge
- Radiation protection and medical applications of radiation
- Demonstration of the feasibility of fusion
- Development of materials, technologies and conceptual design for future fusion power plants
- Promoting innovation and industrial competitiveness through technology transfer
- Availability and use of key research infrastructures
- European nuclear fusion programme

The nuclear-fusion portion of the programme is carried out as a co-fund action under the **European Joint Programme** by the EUROfusion consortium which brings together leading European research organisations engaged in nuclear fusion R&D and aims to develop and build a demonstration fusion power plant. The coordinator is the Max-Planck-Institut für Plasmaphysik, IPP in Garching. In the current programme period, the participation of Czech organisations in the EUROfusion consortium is supported by co-funding from the Ministry of Education of the Czech Republic. The Ministry of Education of the Czech Republic will continue to support Czech participation in the EUROfusion consortium, and therefore contribute to the European Joint Programme.

One of the key EURATOM projects is ITER – an international thermonuclear experimental reactor for nuclear fusion, and its research centre. The ITER project is part of implementation of the European Strategic Energy Technology Plan (SET Plan). It addresses the issue of long-term availability of energy sources by exploring environmentally-sound practices and technologies. Nuclear fusion is set to become an important element of these initiatives thanks to its advantages, including the availability of large quantities of fuel, absence of CO₂ emissions, and sufficient safety.

Further information can be found at this address:

<https://www.h2020.cz/cs/eit-jrc-horizontalni-aktivita-euratom/euratom/informace>

5.4 Joint Research Centre (JRC)

The JRC is a Directorate-General of the European Commission under the responsibility the Commissioner for Education, Culture, Youth and Sport. It consists of seven research institutions based in five Member States: Belgium, Germany, Italy, Netherlands and Spain.

The Joint Research Centre was established in 1957 to disseminate European expertise in nuclear energy. Over time, it has become an extensive, diverse and multifunctional research institute integrated into the European Commission. It is at the frontier between technology research and real-world applications of this research in Community policies. As part of preparation of FP7, new rules were developed for JRC activities. JRC pursues basic research and supports EU policies with scientific and technical consultancy. In close cooperation with the EU's Directorate-Generals, the JRC addresses major societal issues by stimulating innovation, advancing new methods, tools and standards, and sharing know-how with Member States, the scientific community and international partners. The Joint Research Centre can take part as a partner in calls for proposals for implementing its policies under Horizon 2020. Non-nuclear direct actions of the Joint Research Centre are supported with EUR 1,903 million, which equals 2.47% of the budget of Horizon 2020.

Further information can be found at this address:

<https://www.evropskyvyzkum.cz/cs/nastroje-spoluprace/iniciativy-ek/jrc>

5.8 European Institute of Innovation and Technology (EIT)

The EU established the EIT in 2008. The Institute does not provide any project funding. It builds and co-funds a knowledge and innovation community to establish links between universities, research, and business. The EIT helps overcome structural deficiencies in the EU, which are reflected in the poor innovation performance and generation of new products, services and processes. Although the

Institute currently has its own budget, the H2020 programme anticipates it will contribute to tackling EU's societal challenges.

The EIT's objective is to integrate the "knowledge triangle" of research, innovation and education, and thus strengthen the innovation capacity of the Union and seek solutions to Community challenges.

The EIT concentrates on seven focus areas: transfer and use of activities in higher education, research and innovation for starting new businesses; cutting-edge research focused on innovation in areas of economic and societal interest; bringing up talented, qualified and enterprising people through education and vocational training; disseminating proven procedures and systematic knowledge sharing; the international dimension; strengthening Europe-wide impact through innovative funding schemes; opening European opportunities to regions. Knowledge and innovation communities, which were launched in 2010, focus on the following: climate change (Climate-KIC); sustainable energy (KIC InnoEnergy); and information and communication technologies (KIC EIT ICT Labs).

Under Horizon 2020, calls will be announced and funding provided for the following five new KICs: Innovation for healthy living and active ageing; Raw materials – sustainable exploration, extraction, processing, recycling and substitution; Food4Future – sustainable supply chain from resources to consumers; Added-value manufacturing; and Urban mobility.

Further information can be found at this address:

<https://www.evropskyvyzkum.cz/cs/nastroje-spoluprace/iniciativy-ek/eit>

5.7 Related international initiatives

5.7.1 P2Ps and Cofund

Under Horizon 2020, partnerships within the public sector (Public-Public Partnerships, P2Ps) are assisted through a new tool, the programme cofund action. The rules for participation and dissemination in Horizon 2020 define this as an action funded through a grant, the main purpose of which is supplementing individual calls or programmes funded by entities other than Union funding bodies. A programme cofund action may also include complementary activities of networking and coordination between programmes in different countries.

Further information can be found at this address:

www.era-learn.eu

<https://www.h2020.cz/cs/eit-jrc-horizontalni-aktivita-auratom/souvisejici-iniciativy/eranet>

5.7.2 Contractual Public-Private Partnerships (PPP)

PPP is a form of cooperation between public institutions and the private sector aimed at modernizing the provision of strategic public services.

Together with Joint Technology Initiatives (JTIs), the contractual public-private partnerships foster cooperation between the public sector, research, and the business sector for the benefit of research, development and innovation. Eight cPPPs were launched by the European Commission on 17 December 2013, and a ninth one on 13 October 2014. Their areas are of strategic importance to European industry. Unlike JTIs, the cPPPs do not announce their own calls. Instead, the funding – the allocated amount is no less than €6 billion – is provided through the Horizon 2020 calls. Every euro from public resources is expected to be matched with 3-10 euros provided by the private sector for developing new technologies, products and services which secure for the European industry a leading position on global markets.

Further information can be found at these addresses:

www.europa.eu/rapid/press-release_MEMO-13-1159_en.htm

<https://www.h2020.cz/cs/eit-jrc-horizontalni-aktivita-auratom/souvisejici-iniciativy/ppp>

Joint Technology Initiatives – Institutional PPPs

Joint Technology Initiatives are one of the forms of public/private partnerships (PPPs) launched early in FP7 with strong support from the European Commission and European industry, known as institutional PPPs. They built on several industry-relevant European Technology Platforms and were the first example of industry, the research community and public authorities jointly funding ambitious common research objectives on a European scale. Joint undertakings were set up to achieve the objectives of JTIs in accordance with article 187 of the Treaty on the Functioning of the European Union (ex Article 171 of the TEC).

The JTIs continue under Horizon 2020 and bring together the needs and resources of the European Union and industry. They set out commitments, including financial commitments, over a seven-year period from both the EU and from the industry partners. They each have clear objectives and establish their own strategic research and innovation agendas, on the basis of which they fund projects evaluated and selected through calls for project proposals.

Further information can be found at this address:

www.h2020.cz/cs/eit-jrc-horizontalni-aktivita-euratom/souvisejici-iniciativy/jtis

5.7.4 European Technology Platforms

European Technology Platforms (ETPs) bring together key actors (industrial companies, trade associations and unions, higher education institutions and other research organisations, financial institutions, public administration bodies and user and consumer associations) in technology fields of strategic importance. Their purpose is to define and realize visions for medium-term and long-term research, development and innovation (Strategic Research and Innovation Agenda). ETPs should mobilize the research and innovation capacities of their members and other partners, and strengthen the position of their fields on both European and global markets by implementing their strategic research agenda. European Technology Platforms play a role in the functioning of the European Commission as well, as part of the external advice and societal engagement needed to implement Horizon 2020. ETP members establish consortia and develop project proposals to be submitted to H2020, which is why active participation is crucial for the relevant Czech institutions and organisations.

Further information can be found at this address:

<https://ec.europa.eu/research/innovation-union/index.cfm?pg=etp>

5.7.5 European Innovation Partnerships

European Innovation Partnerships (EIPs) are a new approach to research and innovation identified by the EU in one of the flagship initiatives of the Europe 2020 strategy – the Innovation Union. EIPs are not a new programme or tool but joint platforms for partnership and cooperation, focusing on key tasks in areas which are crucial to the economic growth of Europe. Their primary objectives are to define joint tasks, coordinate activities across sectors and policies, link European and national levels, strengthen private/public sector collaboration, eliminate persistent hurdles from innovation and research processes, and accelerate the uptake of innovative ideas by the market. EIPs streamline, coordinate, encompass and complement existing tools and initiatives, wherever relevant. Funding for EIPs is provided from public resources, typically through grants from running programmes at European, national or regional levels. The private sector contributes to these partnerships as well. An important aspect of EIPs is the coordination between member states to prevent duplicating efforts and facilitate effective use of funds. In essence, EIPs are a coordination rather than a financial facility, as they do not provide new funding for research and innovation activities. The EU framework programme for research and innovation Horizon 2020 (2014–2020) comprises the following EIPs:

EIP on Active & Healthy Ageing

EIP on Active & Healthy Ageing (“EIP on AHA”) focuses on Europe’s one of the most pressing societal challenges: the ageing of its population. It links various activities related to healthy and active ageing and independent living of EU citizens, development and production of relevant products and efforts that aim to improve the efficiency and sustainability of social and healthcare systems. An important

aspect is strengthening the competitiveness of European industry through business and expansion to new markets.

EIP on Agricultural Sustainability and Productivity

EIP on Agricultural Sustainability and Productivity ("EIP-AGRI") strives to make European agricultural and forestry sectors competitive and sustainable. Its goal is to secure stable supply of foodstuffs, animal fodder and existing and new biomaterials. It also focuses on sustainable and environmentally sound management of basic natural resources for crop growing. To meet its goals EIP-AGRI strengthens the links between the research and production sectors (farmers, food processing plants, consultancy and non-profit organisations).

EIP on Smart Cities and Communities

The aim of EIP on Smart Cities and Communities ("EIP-SCC") is to provide innovative answers to environmental, societal and health challenges faced by today's cities. It relies on the interaction between information and communication technologies, advanced transport management and environmentally-sound energy management. EIP-SCC strives to remove barriers to the creation of "smart cities", facilitate co-funding of pilots and coordinate existing initiatives by promoting sharing of funding resources.

EIP on Water

EIP on Water supports innovative solutions to major European and global water management challenges. It also strives to market the resulting innovation within and outside the EU. To this end, the partnership initiates and stimulates collaboration between public and private sectors, non-government organisations and the general public. It establishes new action and working groups to achieve its purposes.

EIP on Raw Materials

EIP on Raw Materials reflects two flagship initiatives of the European Commission: "Innovation Union" and "Resource Efficient Europe". Its aim is to help raise industry's contribution to the EU GDP to around 20% by 2020. As part of this ambition, it should also lead to reduced Europe's dependence on raw material imports, stimulate European production and exports, make Europe one of the leading players in raw materials worldwide, and reduce the impacts on the environment and society.

Further information can be found at this address:

<https://www.evropskyvyzkum.cz/cs/nastroje-spoluprace/iniciativy-ek/eip>
<https://ec.europa.eu/research/innovation-union/index.cfm?pg=eip>

5.7.6 Joint Programming

Joint Programming is based on voluntary partnership between EU member states and associated countries and aims to define and carry out joint strategic research and development to address the grand societal challenges. As with other EU-wide tools, the purpose of Joint Programming is to coordinate existing national research and development programmes or establish new ones for all participating countries to share knowledge and experience and effectively coordinate the use of national aid. Selection of optimal tools and monitoring, implementation and evaluation of research programmes take place at the joint level as well.

As one of the initiatives that bring to life the European Research Area, Joint Programming involves both basic and applied research and development. It takes place under 10 initiatives which are open to all EU member states based on their preferences. Primarily, Joint Programming should lead to coordination of existing research budget funds allocated by EU member states to grand societal challenges. It may also involve establishment of new international R&D programmes to integrate the budget funds of EU member states. The underlying motive of Joint Programming is to prevent duplication and/or fragmentation of the efforts of EU member states and their research organisations in addressing the grand societal challenges.

The Czech Republic acts a member or observer in five initiatives of Joint Programming:

- Neurodegenerative Disease Research
- Agriculture, Food Security and Climate Change
- A Healthy Diet for a Healthy Life
- Cultural Heritage
- Antimicrobial Resistance

Further information can be found at this address:

<http://www.msmt.cz/vyzkum-a-vyvoj-2/spolecne-programovani-1-1>

5.7.7 EAFIP - European Assistance For Innovation Procurement

European Assistance for Innovation Procurement provides support for public procurers in innovation procurement (PCP/PPI).

EAFIP focuses on providing support for innovation procurement and training and assistance to public procurers across all EU Member States in the preparation and implementation of innovation procurements of ICT based solutions. It aims to promote benefits and good practices in innovation procurement around Europe in order to promote innovative solutions in public procurement.

Further information can be found at this address:

<http://eafip.eu/about/>

5.8 European Research Council - ERC

The European Research Council (ERC) was founded to support investigator-driven frontier research.

The main objective of the ERC is to stimulate scientific excellence by supporting the best, truly creative scientists. Scientists are motivated to push the current boundaries of knowledge and limits of scientific disciplines. The ERC complements other EU funding schemes (established as part of FP7 and continuing under Horizon 2020), such as national research-funding agencies, and is a flagship of the Ideas programme of FP7. The ERC follows the bottom-up approach in selecting its projects, and therefore enables researchers to identify new opportunities and directions in science disciplines of their interest.

ERC grants are awarded in open competitions to projects led by early-stage as well as experienced scientists, regardless of their nationality, who either work in Europe or are about to relocate to Europe. The only criterion for selection is scientific excellence.

Generally, participation in ERC projects is seen as an indication of the quality of the research organisation – and even as an indicator of the quality of research at the national level:

- to date, Czech research organisations have been awarded 26 ERC grants but they lag behind the research organisations from EU-15 countries in the number of project proposals recommended for funding,
- Czech research organisations submit considerably fewer project proposals than those from the EU15 and show a lower success rate,
- 26% of the proposals from Czech research organisations and 35% of the projects awarded funding fall under three subject panels,
- more than half of the projects which were awarded funding and more than half of the amount of funding from ERC have been won by only three facilities.

In Horizon 2020, the activity of entities from the Czech Republic in ERC is lower than in Western Europe (EU15). Whereas the EU15 average was 12.1 projects per million inhabitants to be recommended for funding in the relevant period, in the Czech Republic this number was 2.3. New

member states (EU13) equally lag behind Western Europe, as the EU13 average is 1.8, whereas the best of the new countries, Cyprus, reports 6.9. Better success rates than in the Czech Republic are also reported by Estonia, Slovenia and Hungary. At the forefront of the EU is the Netherlands (25.7) followed by Scandinavian countries (16-20.4) and Austria (14.4).

The low proportion of Czech projects recommended for funding is not due to the low success rate of the project applications. The latter is indeed 3% lower than the EU15 average, which is 12%. However, Finland, for instance, has an 8% success rate but ranks fourth in the number of projects recommended for funding per million inhabitants, whereas Germany, where the success rate is much higher (16%) ranks tenth. The main cause appears to be the very low number of applicants submitted to the programmes. Seven out of the top ten EU28 countries submitted more than 100 applications per million inhabitants, as opposed to 26 from the Czech Republic.

More information, including contacts, can be found at:

<http://erc.europa.eu>

<http://www.msmt.cz/vyzkum-a-vyvoj-2/erc-cz>

5.9 European Programme for the Competitiveness of Enterprises and SMEs (COSME)

This multi-year programme of Competitiveness of Enterprises and Small and Medium-Sized Enterprises 2014–2020 is a European Community scheme. Its focus areas include: simpler access to financing for small and medium-sized enterprises, easier creation and development of enterprises, business education in Europe, strengthening the competitiveness of European companies in the long term, and supporting the internationalisation of small and medium-sized enterprises and their access to foreign markets. COSME complements both Horizon 2020 and the Cohesion Policy of the EU, where the latter is supported from the Structural Funds under national Operational Programmes in Member States.

The programme was allocated EUR 2.5 billion for the 2014–2020 period, and is expected to contribute more than EUR 1 billion to the European GDP every year.

More information about the programmes, including contacts, can be found at the following addresses:

<https://www.mpo.cz/cz/podnikani/dotace-a-podpora-podnikani/programy-eu-na-podporu-msp/cosme/program-pro-konkurenceschopnost-podniku-a-malych-a-strednich-podniku-2014-2020-cosme--146656/>

https://ec.europa.eu/growth/smes/cosme_cs

5.10 The Research Fund for Coal and Steel – RFCS

When the Czech Republic joined the European Union, it also became a member of what used to be the European Coal and Steel Community. The revenues generated from the assets of the European Coal and Steel Community (established by the 1952 Treaty for a period of 50 years, which expired on 23 July 2002) were gradually transferred to the European Union and are used to support activities under the RFCS research programme. The administrator of the Czech membership is the Ministry of Industry and Trade and the co-administrator is the Ministry of Education. The Research Fund for Coal and Steel funds projects conducted by all types of undertakings, as well as research organisations. Grants are awarded for research, pilot and demonstration projects outside the EU Framework Programmes.

The main objective of the programme is to support competitiveness of the coal and steel-related sectors. Its priorities in the coal section include strengthening the EU's competitive position, the health and safety in mines, and better use of coal as a clean source of energy. A total of 12 Coal and Steel Technical Groups have been formed to monitor and evaluate projects; three of them focus on coal. The European Commission administers the remaining assets of the European Coal and Steel Community and uses the annual interest to fund RFCS research projects. This amounts to approximately EUR 55 million a year.

The Research Fund co-finances successful project proposals from its budget in the following proportions: 27.8 % for coal and 78.2 % for steel. The RFCS co-funding potential in coal-related projects is not fully used by the organisations in the Czech Republic.

Applicants for funding are mostly SMEs, undertakings, and research institutes. They may come from the former ECSC countries (European Coal and Steel Community), from candidate countries, or even from third countries, on condition that they meet the programme objectives. The applicants' activities need not be directly related to coal and steel, but their research and technical development plans must be in accord with the programme.

The programme supports research work that leads to streamlined production, provided that the equipment to be installed as part of the effort is adequately sophisticated.

For research projects, the maximum financial contribution is 60% of the eligible costs. For pilot and demonstration projects, it is 40%, and for accompanying measures and preparation activities it is 100% of the eligible costs. The public grant may only be used for the purpose and activities specified in the contract, and only to cover the necessary costs related to the project. The programme's typical annual budget is about € 53 million. The call for proposals is continuous, with an annual deadline on 15 September.

The conformity of each proposal's objectives with the interests of the EU is examined. The preferred proposals are those characterized by coordinated interaction, complementarity, and synergies between various research programmes, and by information exchange between projects funded from this programme, FP7, and Horizon 2020.

More information about the programme, including contacts, can be found at the following addresses:
https://ec.europa.eu/info/research-and-innovation/research-area/industrial-research-and-innovation_en

5.11 Copernicus

Copernicus (formerly GMES) is a European programme for monitoring the environment and security situation in order to deliver early and accurate information for decision-making. It represents the Europe's own capacity for monitoring the Earth, and is considered the European contribution to the GEOSS system. It provides its users with free, full and open access to data and information. Its initial stage in 2011–2013 involved the preparation of the programme's data policy. In 2014, Copernicus became fully operational.

Copernicus and its service components are coordinated by the European Commission. Its Space Component is the joint responsibility of the European Space Agency (ESA) and the European Organisation for the Exploitation of Meteorological Satellites (EUMETSAT). The In Situ Component is coordinated by the European Environment Agency. Separate Copernicus services are delivered by authorized European institutions in cooperation with the European Commission.

In 2014–2020, public tenders, mainly for construction of infrastructure, are announced by the European Commission and the European Space Agency. Applicable conditions are set out in each case in the call for tenders. Small-scale projects can receive additional funding from Horizon 2020 as part of the Industrial Leadership – Space section (for data utilisation, COPERNICUS applications, and other topics). Eligible applicants include entities from EU Member States (in public tenders announced by the European Commission), and ESA Member States (in public tenders announced by the ESA). The participation in Horizon 2020 projects is governed by the rules of this programme. The COPERNICUS programme was approved for the 2014–2020 period with a budget of €4.3 billion.

More information about the programme, including contacts, can be found at the following addresses:
<http://copernicus.gov.cz/>
<https://www.copernicus.eu/en>

6. INTERNATIONAL COOPERATION

In the Czech government, the department responsible for international cooperation in research and development is the Ministry of Education. International cooperation in research and development follows a long-term strategy. Its basis and the key part are joint research and development projects and participation in international multilateral projects or activities. Some bilateral cooperation agreements are limited to researcher mobility. Details of such arrangements are described below with reference to individual countries.

In the Czech Republic, the legal framework for bilateral cooperation in R&D comprises three types of agreements: those on cooperation in science and technology, the cultural agreements, and the agreements on economic, industrial and science and technology cooperation. The first are negotiated by the Ministry of Education. The second are the joint responsibility of the Ministry of Education, the Ministry of Culture, and the Ministry of Foreign Affairs. The last-named agreements are prepared by the Ministry of Education, and the Ministry of Industry and Trade.

6.1 INTER-EXCELLENCE Programme

Previous aid programmes are now integrated into an umbrella programme entitled INTER-EXCELLENCE.

The programme stimulates international collaboration in R&D and participation of Czech entities in European and global research networks. It aims to promote the participation of Czech facilities in European collaborative projects and the cooperation with non-EU countries. For Czech research teams, it should facilitate access to international knowledge, findings and skills.

It supersedes multiple programmes of international collaboration in R&D administered by the Ministry of Education of the Czech Republic (COST CZ, EUPRO II, EUREKA CZ, INGO II, CONTACT II and GESHER / MOST) which ended in the 2016–2017 period. The new INTER-EXCELLENCE programme seamlessly followed on from these projects and provides financial aid for the period from 2016 to 2024.

It comprises six interactive sub-programmes grouped into three logical units aimed at fulfilling three complementary and interrelated objectives.

- Objective 1: Advancement of international bilateral and multilateral collaboration in research and development
- Objective 2: Provision of services for participation of the Czech Republic in the ERA and other multilateral activities through indirect support for research and development
- Objective 3: Engagement of Czech entities in applied research under the EUREKA international programme

The sub-programmes INTER-A(CTION), INTER-C(OST) and INTER-T(RANSFER) associated with OBJECTIVE 1, which replace the programmes CONTACT II, GESHER/MOST, COST CZ and the sub-programme INFRA of the programme INGO II, are intended to help Czech research facilities join international projects carried out by foreign centres of excellence, engage in the European programme COST, and develop their collaboration with EU member and non-member states on the basis of bilateral intergovernmental or interdepartmental agreements.

The sub-programmes INTER-I(NFORM) and INTER-V(ECTOR) associated with OBJECTIVE 2, which supersede the EUPRO II programme and the POPLATEK sub-programme of INGO II programme, promote the accessibility of strategic information, and other activities related to the integration of Czech research organisations into international research and development initiatives or organisations. The sub-programme INTER-E(UREKA) associated with OBJECTIVE 3, which supersedes EUREKA CZ, helps those Czech enterprises which engage in research and development to join the international EUREKA programme, supports the links between Czech research facilities and international entities, and thus promotes the production of high-quality R&D results with industrial and service potential. The purpose of the programme is to advance and strengthen Czech research and development efforts via international collaboration, achieve synergies through combination with other aid mechanisms,

leverage the supported activities and establish effective links with the international research community.

The programme is a tool for strategic focusing of international collaboration aid. It stimulates international collaboration in R&D and participation of Czech entities in European and worldwide research networks. It aims to promote the participation of Czech facilities in European collaborative projects and the cooperation with non-EU countries. For Czech research teams, it should facilitate access to international knowledge, findings and skills. By laying emphasis on strengthening international collaboration, the programme will help improve the quality of research and development output and establish effective links between the research in priority areas in the Czech Republic and the international activities.

The programme period is 2016–2024 and its projects should be no longer than five years. Over this period, the funding provider will launch several public tenders for research, development and innovation (PTRDI) under individual sub-programmes or their combinations. In addition, some projects may be chosen for funding by international bodies.

State budget expenditure by sub-programmes and years (mil. CZK)

	ACTION	COST	TRANSFER	INFORM	VECTOR	EUREKA	Total
2017	96	43	34	26	2	39	240
2018	200	94	84	57	6	84	525
2019	301	141	127	86	8	127	790
2020	355	166	150	101	9	149	930
2021	355	166	150	101	9	149	930
2022	301	141	127	86	8	127	790
2023	200	94	84	57	5	85	525
2024	92	45	44	26	3	40	250
Total	1,900	890	800	540	50	800	4,980

The programme involves consecutive public tenders (PTRDI), normally in the 1st or 2nd (or 3rd if needed) quarter of the calendar year. Their results will normally be announced and contracts with aid beneficiaries will be entered into during the 4th quarter of the same year. The aid will be released in the 1st quarter of the next calendar year. This does not apply to PTRDIs under INTER-A(CTION) whose times will depend on agreements with partner countries. The aid has the form of specific-purpose grants.

According to budget rules, these grants must be used for the specified purpose in the calendar year in which they were awarded. The schedule therefore complies with current budget rules. At least one PTRDI is announced in each sub-programme every year. (INTER-E(UREKA) is an exception where projects are selected by international bodies and no public tenders are announced.) Up to four PTRDIs may take place under INTER-A(CTION) and up to two public tenders in all other sub-programmes (except INTER-E(UREKA)). Across the entire programme, the funding provider may therefore carry out up to 12 public tenders for research, development and innovation, which makes 72 PTRDIs over the whole programme period.

Maximum amounts of aid in individual research and development categories and sub-programmes

	ACTION	COST	EUREKA	TRANSFER
Basic research	100%	100%		100%
Industrial research – research organisation	100%	100%	50%	
Industrial research – undertaking	50%	50%	50%	
Experimental development – research organisation	100%	100%	25%	
Experimental development – undertaking	25%	25%	25%	

You can find more information at: www.msmt.cz/vyzkum-a-vyvoj-2/inter-excellence

6.1.1 INTER-(A)CTION sub-programme

Successor to CONTACT II and GESHER/BRIDGE programmes

The programme supports the collaboration between Czech research facilities and their partner sites in relevant countries with which an agreement or another implementation document, such bilateral intergovernmental or interdepartmental agreement for research and development has been made. The list of these countries valid on the date of the announcement of the PTRDI applies.

The Czech Republic has entered into bilateral intergovernmental or interdepartmental agreements for collaboration in research and development with several prominent non-EU countries. Without direct support, such bilateral collaboration would be no more than an empty proclamation, which would hamper the advancement of research and development as well as the bilateral relations. The motivation is to exploit the potential for collaboration with natural partners of the Czech Republic, i.e. those countries within and outside the EU with certain links to the Czech Republic's location, cultural background and traditions.

Similar financially-based aid mechanisms for joint projects of international cooperation in research and development can also be found in neighbouring states. The need for such schemes arose with the evolution of the ERA (European Research Area) and internationalisation of research and development involving third countries (outside the ERA). In such cases, bilateral cooperation is built on international agreements (much like in the Czech Republic). Funding providers from each country typically reimburse only the costs of entities which are based in their country. They coordinate the public tenders in order to prevent difficulties which the aid beneficiaries might face when allocating and coordinating their research activities under the joint project. Some aid mechanisms involve direct funding for registered joint projects, others require the participants to apply for aid with national agencies which provide funding for research and development. In some schemes, state-owned or public research organisations cover the costs of joint research with foreign partners from the funding provided by their home state as institutional funding (i.e. from their own operational funding). Typically, in those schemes, no additional grants are obtained from central resources for such projects (specific-purpose funding).

Good examples of aid programmes for bilateral or multilateral international cooperation with third countries which may serve as models for creating an analogous scheme in the Czech Republic are those in the Swiss Confederation or those administered by the Danish Council for Strategic Research.

The bilateral programmes of the Swiss Confederation focus on supporting and strengthening scientific cooperation with Brazil, China, India, Russia, the South African Republic and South Korea. Typical projects under those programmes last three years. The grants cover procurement of equipment and operating costs arising from research activities, including salaries. Most public tenders aim at research themes which are seen as priorities by both countries.

The Danish Council for Strategic Research has entered into bilateral agreements for support of science and research in selected disciplines with China, Brazil, India and South Korea.

From the viewpoint of the Czech Republic, balanced support across all partner states is important because aid must be provided to projects from all countries where an agreement for collaboration in research and development was activated by either party.

INTER-A(CTION) is expected to improve the competitiveness of Czech research facilities by strengthening international collaboration, mainly with countries outside the EU.

Applicant entities may include small, medium or large enterprises based in the Czech Republic engaged in research.

To date, there have been nine public tenders. In 2019, CZK 553 million was awarded in five calls for proposals. The data are sums for calls in 2019.

INTER-ACTION - SMSM2019LTA and amount of aid

Source: Research, Development and Innovation Information System

6.1.2 INTER-(C)OST sub-programme

The sub-programme supports the participation of Czech research teams in the COST multilateral European collaboration platform in the field of basic or applied research. It may involve new actions (themes selected for aid by COST bodies) proposed by Czech teams, or joining existing actions (themes) proposed by other research teams.

The Czech research and development continues to be very isolated. Every opportunity should therefore be used to connect it with the international community and developments. INTER-C(OST) directly follows on from the international programme COST.

COST offers a platform for interaction and exchange of information between scientists from COST member countries and cooperating states. INTER-C(OST) supports projects arising from the COST programme.

Methods of funding national COST projects differ in member countries (which need not be EU members). The participants may submit their applications to national funding providers (in the UK it is the Engineering and Physical Sciences Research Council; in Turkey it is the Scientific and Technological Research Council of Turkey). The amounts of aid vary as well, depending on the budget and priorities of the particular COST programme (up to CZK 4.2m (converted amount) per project in Turkey and CZK 4.6m in Switzerland). The Benelux Union, Scandinavian countries, Germany and Israel maintain a joint science fund which supports both national and international activities.

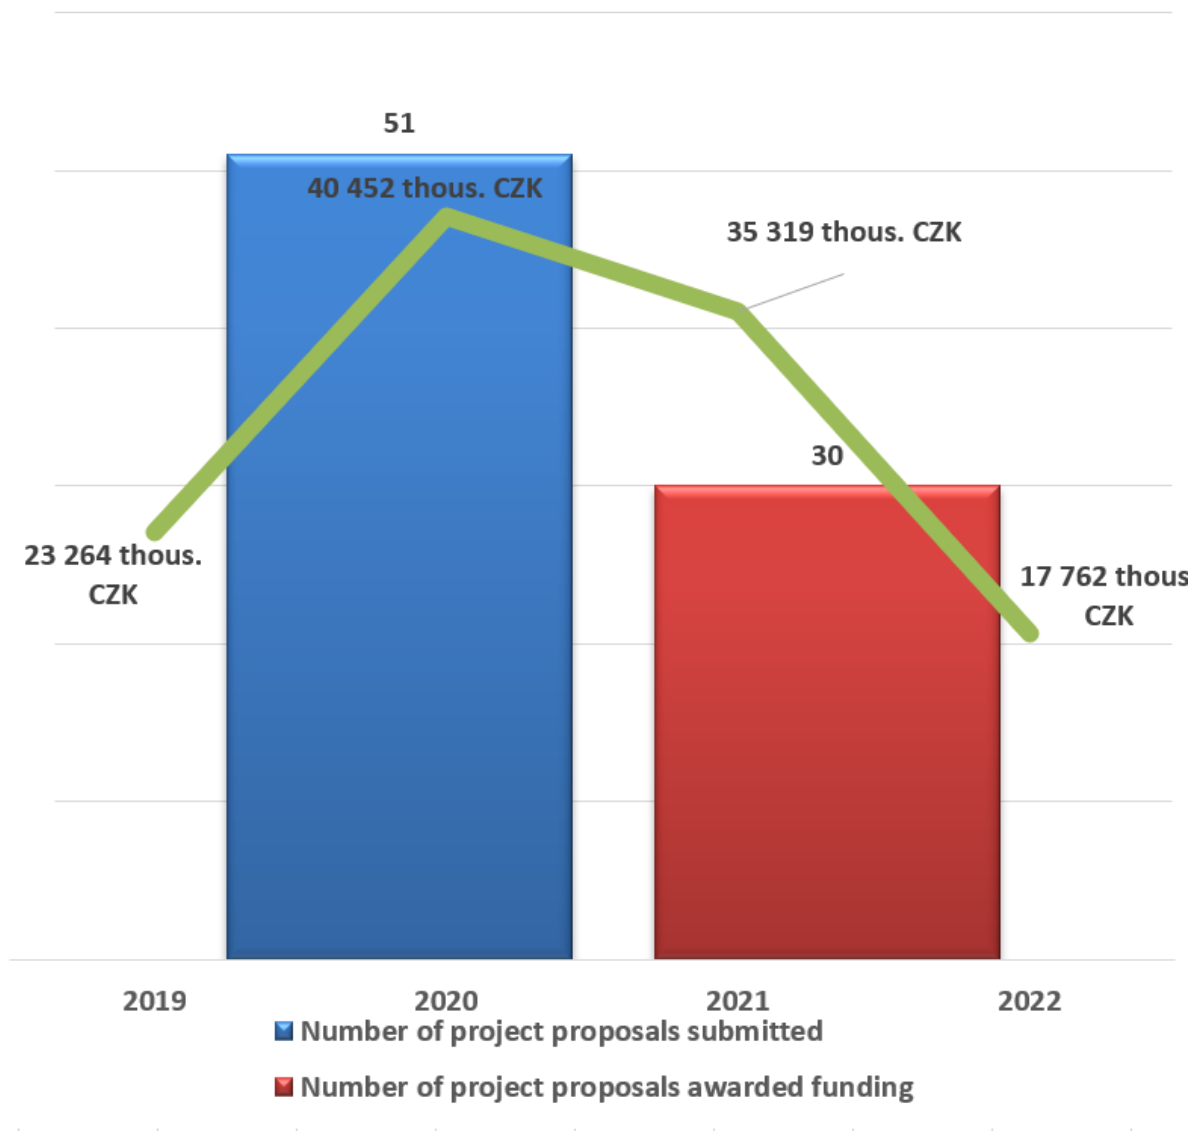

Schemes that combine the international support of networking activities and national support in the form of funding for research and development initiated by personal contact and exchange of information deliver effective synergies. The COST international programme is expected to help gradually break Czech research and development from its isolation and broaden international cooperation through contacts with notable European research facilities. The INTER-C(OST) sub-programme is expected to support the participation of Czech researchers and facilities in international projects and programmes, such as the H2020.

Participation in COST is a prerequisite for taking part in this sub-programme.

Applicant entities may include research organisations and small and medium enterprises based in the Czech Republic that are engaged in research.

Five public tenders have already taken place. In the last one evaluated, CZK 117 million was distributed among projects planned for up to four years.

INTER-COST - SMSM2019LTC01 and amount of aid

Source: Research, Development and Innovation Information System

6.1.3 INTER-(T)RANSFER sub-programme

This sub-programme's objective is to support the participation of Czech scientists in international research and development projects. To this end, the sub-programme facilitates Czech scientists' membership in leading international research teams or in projects based in foreign research centres, international organisations and government institutions. This includes cases where applicants are eligible to become members, as well as cases where participation has not yet been enabled by the membership of and membership fees paid by the Czech Republic.

Highly-specialized centres of excellence exist and continue to be established to offer unique and expensive cutting-edge instruments, which are typically funded via contributions from member countries/founding members. The centres attract scientists from across the globe who build international research teams which in turn make these exclusive centres even stronger and more exceptional.

The Czech Republic pays membership fees in the form of contributions towards sustainability of some international organisations/government institutions which run centres of excellence. These fees are a precondition for the participation of Czech scientists.

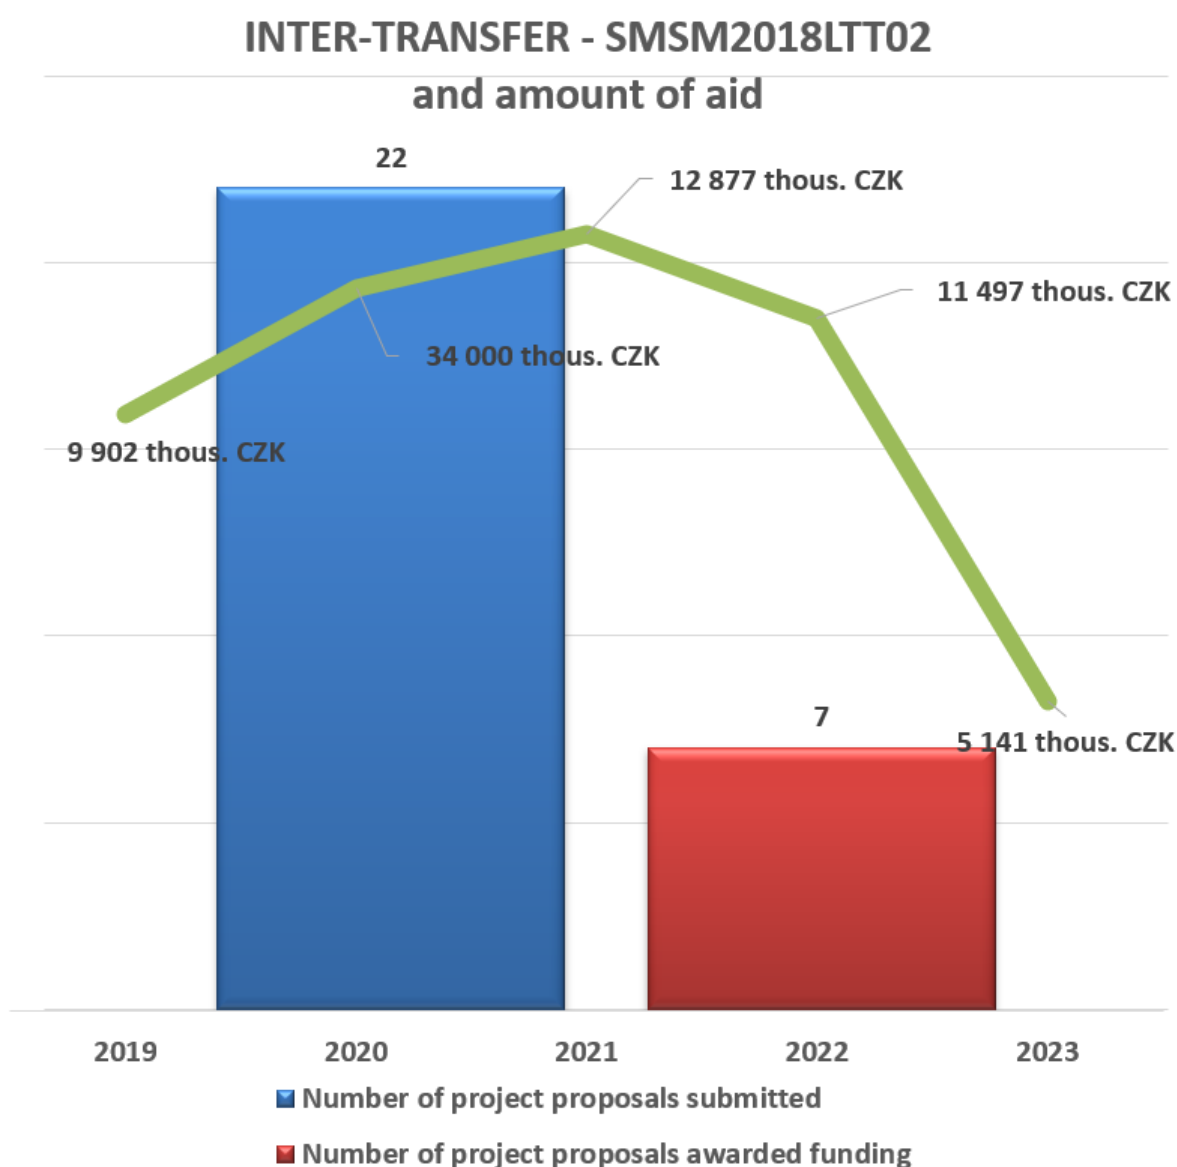

This kind of potential must not be wasted. The access of Czech researchers to these outstanding facilities (in terms of both equipment and human resources) must be supported in cases where applicants are eligible to become members, as well as in cases where participation has not yet been enabled by the membership of them and membership fees paid by the Czech Republic.

The expected outcomes of INTER-T(RANSFER) include the professional growth and development of Czech scientists through gathering international experience, and increased research output in the form of scientific knowledge and measurable results.

INTER-T(RANSFER) delivers synergies mainly with INTER-V(ECTOR).

The applicant entity must be a research organisation.

Four public tenders have already taken place. In the last one, CZK 51 million was distributed among projects planned for up to five years.

Source: Research, Development and Innovation Information System

6.1.4 The INTER-(I)NFORM sub-programme

The sub-programme supports the creation and sustainability of information networks and services in research and development in order to expand the participation of Czech research facilities in international research and development programmes..

In terms of the use of funds from framework programmes, the Czech Republic is one of the less successful EU countries. The level of internationalisation of research at both national and institutional levels is insufficient. In order to change this, the existing information transfer infrastructure must be mobilised and broader service support must be provided to Czech entities to facilitate their engagement in the activities of international research teams and international cooperation in general.

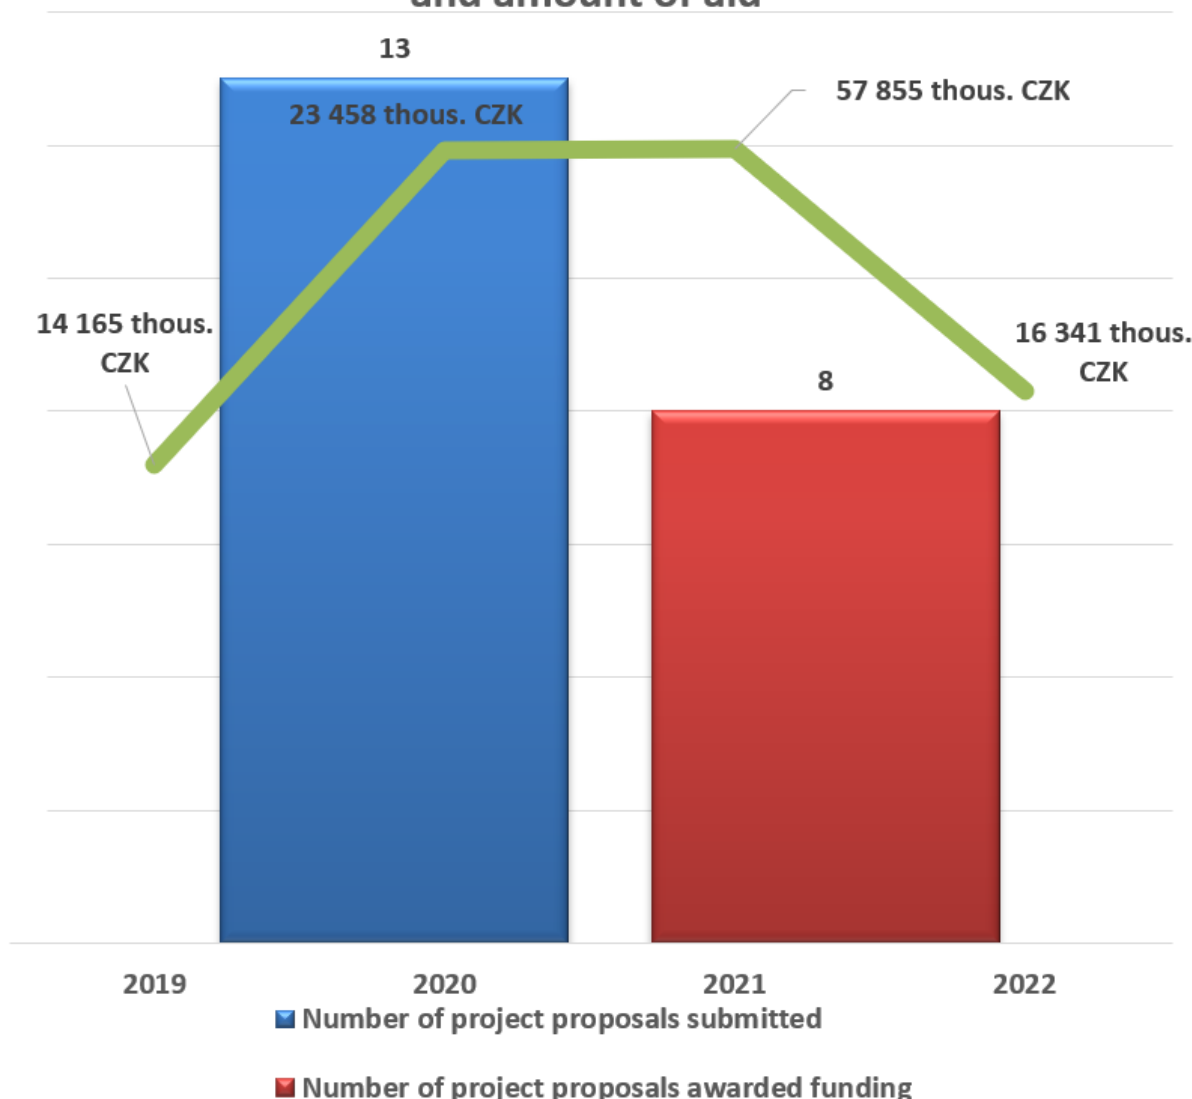

The sub-programme will help disseminate information about available international aid programmes, provide consultancy, and thus facilitate the funding of research projects which promise to succeed in the international competition for limited funds.

INTER-I(NFORM) is expected to increase the engagement of Czech research facilities in international R&D programmes and their success in obtaining funding and producing high-quality research output.

Eligible applicant entities are research organisations; the aid intensity may reach 100%.

Four public tenders have already taken place. In the last one completed, CZK 77 million was distributed among projects planned for four years.

INTER-INFORM - SMSM2018LTI19 and amount of aid

Source: Research, Development and Innovation Information System

6.1.5 The INTER-(V)ECTOR sub-programme

This sub-programme aims to strengthen the active role of Czech researchers in the managing authorities of leading international non-governmental organisations engaged in research and development.

The voice of the Czech scientific community in these bodies does not reflect its capacity and potential. As a result, the country lacks the opportunity to steer the development of science and research on an international scale.

Other countries are active in this respect as well, funding their efforts to secure their representation in the managing authorities of international institutions where the environment is considerably more competitive than on the national scene. Typically, institutional and specific-purpose funding are combined for this purpose (e.g. the sending institution meets the costs of its employees using funds for science and research provided from the central budget). Not all countries, however, have established special programmes to this end. The Czech Republic has decided to do so and has included the programme in the national aid system in order to standardize the decision-making rules regarding the

participation of Czech representatives in individual projects, to conduct periodic reviews of the funded projects and to simplify the evaluation of their quality and outcomes.

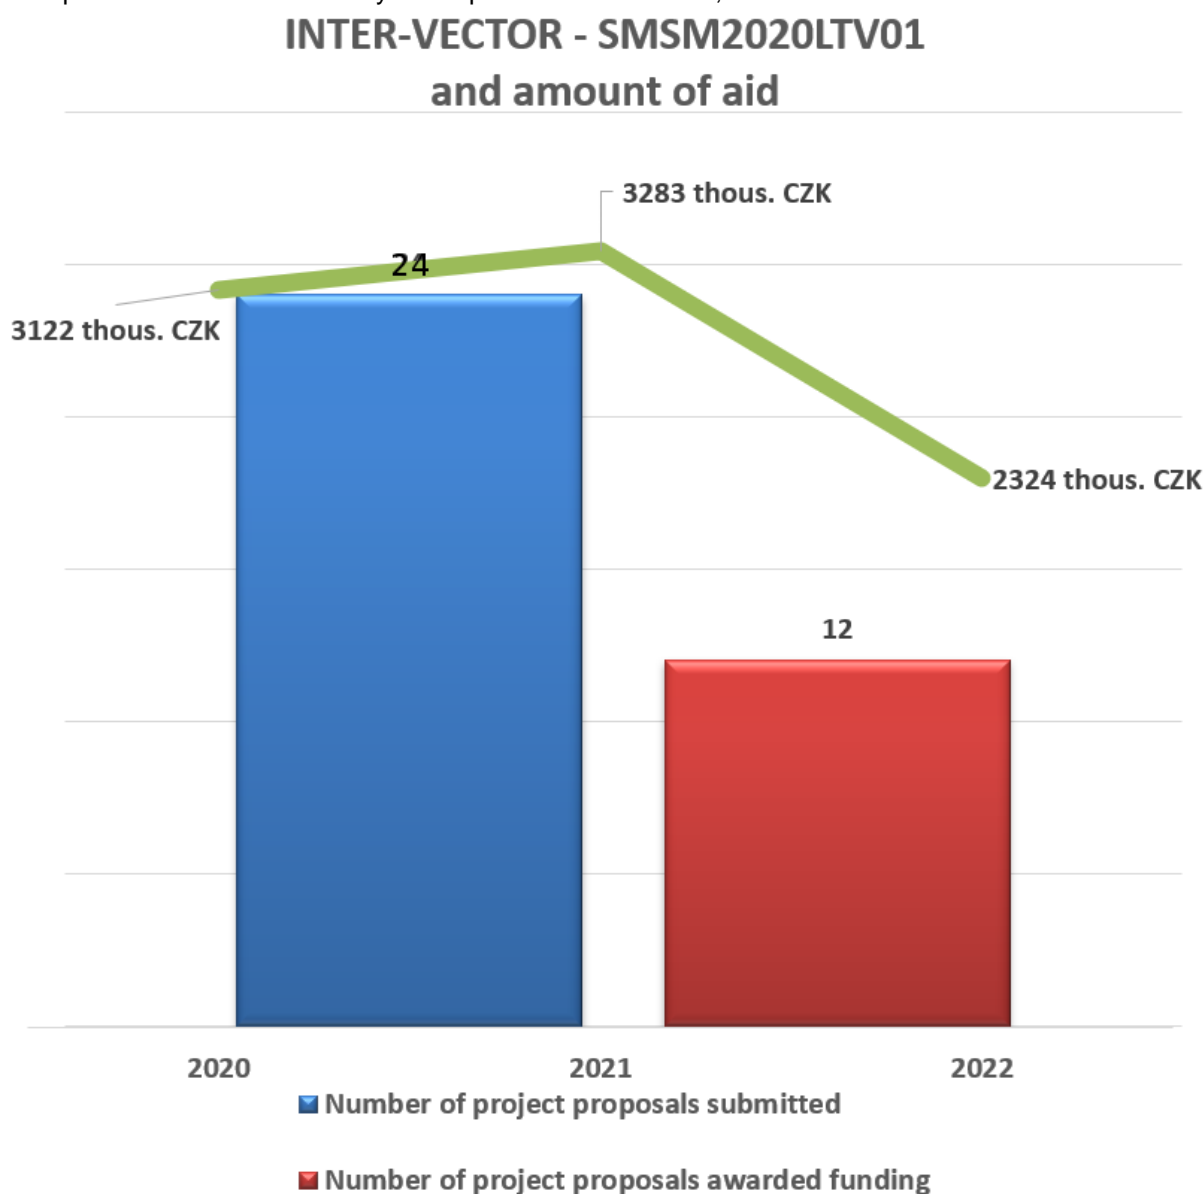

The funding that aims to strengthen the role of Czech researchers in the managing authorities of leading international non-governmental organisation engaged in research and development will contribute to the potential for shaping the decisions and strategic plans on an international scale by Czech scientists.

INTER-V(ECTOR) is expected to strengthen the Czech representation, the ties between Czech and foreign research communities and the awareness and prestige of Czech science.

INTER-V(VECTOR) exhibits synergies mainly with INTER-T(RANSFER).

Eligible applicant entities are research organisations; the aid intensity may reach 100%.

Four public tenders have already taken place. In the last one, CZK 9 million was awarded.

Source: Research, Development and Innovation Information System

6.1.6 The INTER-(E)UREKA sub-programme

This sub-programme supports international cooperation between industrial companies and research organisations, building on the EUREKA international programme.

In terms of labour productivity growth, Czech industry lags behind other countries of the former Eastern Bloc. At the same time, the gap between labour productivity growth in Western Europe and Central and Eastern European countries keeps widening.

To counter these undesirable trends, the collaboration between industry and research organisations/higher education institutions needs to be improved, together with the attractiveness of the Czech Republic to investors, while the country must offer qualified labour force available for developing high-added-value industry sectors. Synergistic effects can be achieved by applied research collaboration between Czech companies, namely small and medium-sized enterprises, Czech research organisations and foreign partners. INTER-E(UREKA) directly builds on the EUREKA international programme.

EUREKA promotes closer relationships between industrial companies of all sizes and research organisations by labelling selected projects with the “EUREKA status”, a “quality label” which enables proposers to apply for co-funding from public specific-purpose funds in their home countries. Co-funding EUREKA projects is a necessary precondition for a country to become a member of EUREKA. Every member state defines its own methods and financial aid rules for supporting its investigator entities under the programme, depending on their national priorities and available budget.

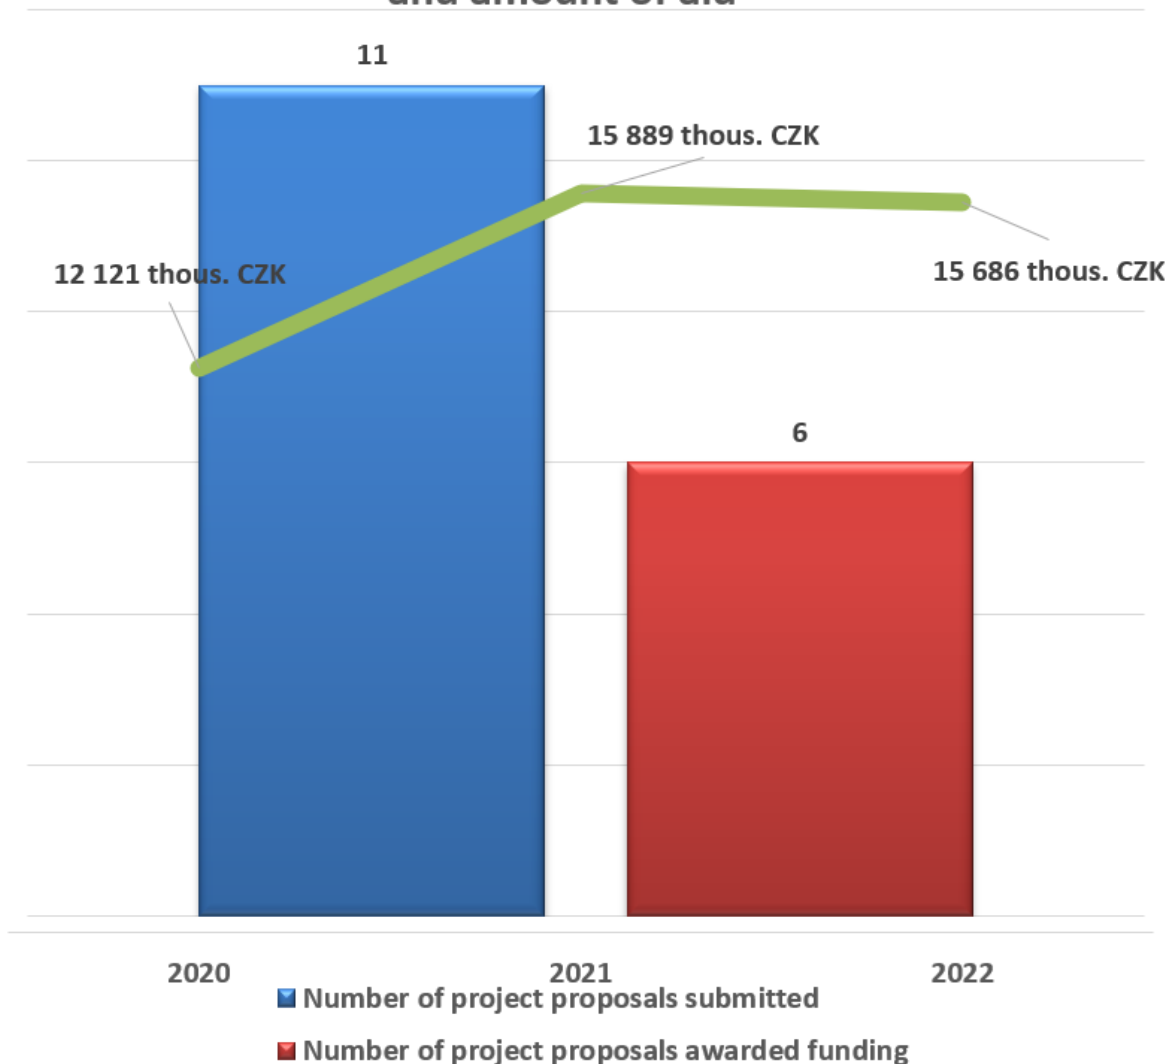

INTER-E(UREKA) is expected to boost the research and development output in the form of patents, utility designs and equivalent results of applied research, where the Czech Republic lags behind the rest of Europe.

Participation in EUREKA and the award of the “EUREKA status” is a necessary precondition for participating in the sub-programme.

Eligible applicant entities include small, medium-sized and large enterprises based in the Czech Republic and engaged in research. Research organisations may join as additional participants.

Eight national calls have already taken place. In the last one completed, CZK 44 million was distributed among projects planned for up to four years. **The current eighth call ends on 31 March 2020.**

Source: Research, Development and Innovation Information System

6.2 Large infrastructures for research, development and innovation

The operation of excellent research infrastructures in the EU was identified in the previous period as one of the key preconditions for effective growth of R&D, the competitiveness of national research and innovation systems in EU countries, and the European Research Area and European economy. Addressing today's increasingly technologically complex and intricate socio-economic challenges becomes more feasible when expertise is shared across research infrastructures coordinated on an international scale.

6.2.1 General information

"Research infrastructure" means facilities, resources and related services that are used by the scientific community to conduct research in their respective fields and covers scientific equipment or set of instruments, knowledge-based resources such as collections, archives or structured scientific information, enabling information and communication technology-based infrastructures such as grid, computing, software and communication, or any other entity of a unique nature essential for conducting research. Such infrastructures may be 'single-sited' or 'distributed' (an organised network of resources). Czech legislation specifies the large research infrastructure as "a research facility necessary for

comprehensive and financially and technologically-intensive research and development activities as approved by the government, which is established for use by other research organisations.”

When research infrastructures are operated within an integrated international space – in accordance with principles of the open access policy – their users can achieve results which they might not be able to produce as individual actors in their home institutions. In this respect, research infrastructures contribute to the effective use of public spending on R&D, and prevent fragmentation and duplication of the efforts of isolated research organisations. Users of international research infrastructures gain access to state-of-the-art equipment, instruments and expertise for excellent R&D.

Over recent years, the Czech Republic has recognized the increasing importance of research infrastructures to its national research and innovation system and has taken a number of steps to facilitate their building, operation, funding, development and integration into international structures.

Research infrastructures fall into three groups by their type: single-sited research infrastructures, distributed infrastructures comprising multiple sites, and virtual research infrastructures. Based on their lifecycle, research infrastructures may be in their preparatory phase, implementation phase, construction phase, operational phase or decommissioning phase. Except for the decommissioning phase, all of them can be found in the national research and innovation system of the Czech Republic. A singular type of large research infrastructure project in the Czech Republic is an infrastructure operated for the purpose of securing the participation of the country in a large international research infrastructure abroad. It involves the development and “in-kind” contribution of experimental equipment for an international research infrastructure being constructed or upgraded (such as CERN). Where this international research infrastructure is administered by an international organisation established according to international public law or according to ERIC, any additional obligations arising from the membership of the Czech Republic (e.g., payment of mandatory member fee for the country) are handled by the Ministry of Education of the Czech Republic as the competent body on behalf of the country.

6.2.2 Financing

Operating costs of large research infrastructures are covered by the Ministry of Education of the Czech Republic from the state budget for research, experimental development and innovation, the specific-purpose expenditure being entitled Projects of Large Research Infrastructures (LM). The Ministry of Education plans to use these funds for the years 2020-2022 as well. In 2020-2022, capital costs are to be met from the ESIF funds, specifically from RDEOP, based on the evaluation of two calls (Research Infrastructures II and Research e-Infrastructures). The total specific-purpose aid from the Ministry of Education for 2020-2022 will reach CZK 1890 million/year.

In 2019, the R&D Council established a working group for large research infrastructures (LRI) to identify research infrastructures as well as LRI for setting up a scheme of the source of their funding and the desired funding contributions after 2022. In 2019, the government approved the Innovation Strategy of the Czech Republic 2019-2030. One of the pillars in this strategy are Innovation and Research Centres. One of the objectives was to set up a complementary scheme of funding for RDI facilities in the form of institutional funding intended for the long-term strategic development of research organisations and large research infrastructures on the one hand and tools for supporting long-term strategic collaboration between the public research sector and industry in the form of National Centres of Competence on the other. Members of the working group have agreed on the following principles:

- The capacity of a large research infrastructure should be available to all potential users, regardless of their institutional and public sector or business background.
- Specific-purpose funding from the Ministry of Education for large research infrastructures should cover a majority of their operating costs to keep their budgets stable and their expenditure and activities predictable, as they embody a strategic investment of the country in the knowledge economy and international competitiveness.
- In this open access arrangement, free access to large research infrastructures is available to any potential users who submit to the infrastructure operator a proposal for use of the

infrastructure which meets the quality and relevance criteria. An open competition then leads to the selection of winning users based on the quality and relevance of their proposals.

- In the contract RDI arrangement, the capacity of a large research infrastructure is available to any potential user who pays the costs of the proportion they use. For this purpose, large research infrastructures should assign a portion of their capacity for use by contract partners (within the limits set out in European legislation which provides for the compatibility of public aid with the internal market of the EU) based on an ex-ante analysis of the potential for such use.
- Pressure should be put on continuous evaluation of the quality of services of large research infrastructures in the Czech Republic with respect to foreign infrastructures, reflecting the experience of foreign users and the infrastructure's renown. If a substantial part of the capacity of a large research infrastructure were utilized by foreign entities (i.e., beyond the extent which stimulates its development), it should either be compensated by utilization of other research infrastructures governed by international treaties or as part of international research infrastructure networks, or the operational and investment costs should be shared in budget terms.

In 2021, large research infrastructures in the Czech Republic and their new proposals will be evaluated. The data will become part of an independent document to be submitted to the Czech government to decide on public funding for large research infrastructures for 2023-2029. In the draft long-term budget of the Czech Republic related to spending for research, development and innovation for 2022-2025 submitted by the Ministry of Education, the unavailability of ESIF after 2022 is reflected. Specific-purpose funding by the Ministry of Education of the Czech Republic includes allocation for the investment costs of large research infrastructures which, until 2022, can also be met by ESIF funds provided through RDEOP. Gap analysis and ex-ante evaluation will be conducted on new proposals for large research infrastructures. The purpose is to explore the socioeconomic demand for new large research infrastructures and identify relevant areas in the Czech Republic. Based on this international evaluation, a budget framework will be developed in 2022 for funding large research infrastructures in 2023 and onwards as part of preparation of the country's budget for research, development and innovation for 2023 and medium-term projections for 2024 to 2025. Large research infrastructure are expected to be funded from the public funds of the Czech Republic in 7-year periods starting in 2023. This is equivalent to the 7-year periods of the framework programmes of the EU for research, development and innovation and cohesion policy instruments. Two alternatives have been identified for securing public funding for large research infrastructures beyond 2022. In the first one, the Ministry of Education uses the state budget for research, development and innovation through the specific-purpose support provided by the Ministry to cover the operating costs of large research infrastructures and the ESIF funds to meet the investment costs. In the second one, the Ministry of Education uses the state budget for research, development and innovation through the specific-purpose support to cover both operating and investment costs of large research infrastructures.

6.2.3 International structure

The body responsible for membership of the Czech Republic in ERIC entities is the Ministry of Education of the Czech Republic as it also administers large research infrastructures and international cooperation in research and development. The ministry deals with matters of membership of the country in the ERIC entities (as detailed below) and represents the country in their managing bodies. The Ministry operates in close cooperation with representatives of the Czech research community who are responsible for the research matters of the membership. For European distributed research infrastructures, this typically means operation of a Czech national contact node. For European single-sited research infrastructures, the Czech research community is typically involved through in-kind technology contributions.

In legal terms, the increased emphasis on pan-European research infrastructures led in 2009 to the creation of a new EU legal framework defining special management principles and funding methods. A new type of legal person was defined – **European Research Infrastructure Consortium (ERIC)** – which offers various flexible management models for pan-European research infrastructures and exemption from value added tax for their operators. The ERIC is set up by a decision of the European Commission upon an application by potential ERIC member states. ERIC members may include states and international organisations. Besides the legal framework for establishment, ERIC differs from

international organisations in the way their member states contribute to the operating and investment costs of the research infrastructure.

Whereas the only obligation of a member state of an international organisation established according to international public law is typically the payment of a mandatory contribution, the obligations of ERIC member states may take various forms. The contribution to the operation of ERIC may take the form of a mandatory membership fee, a contribution to direct operating or investment costs, activities involving operation of part of the research infrastructure (e.g. a national “node” of a distributed research infrastructure) or a combination of the above, and may be provided in-cash or in-kind.

The ERIC framework is beneficial in that the ERIC legal person, while a legal person is a typical necessary precondition for international research infrastructures, is simpler to set up than international R&D organisations governed by international public law.

In the previous years, the Czech Republic became a member state of 14 ERIC infrastructures.

- **BBMRI-ERIC** (Bio-banking and Bio-molecular Resources Research Infrastructure),
- **CERIC-ERIC** (Central European Research Infrastructure Consortium),
- **CESSDA ERIC** (Consortium of European Social Science Data Archives),
- **CLARIN ERIC** (Common Language Resources and Technology Infrastructure),
- **DARIAH ERIC** (Digital Research Infrastructure for the Arts and Humanities),
- **EATRIS-ERIC** (European Infrastructure for Translational Medicine),
- **ECRIN-ERIC** (European Clinical Research Infrastructure Network),
- **ESS ERIC** (European Social Survey),
- **Euro-BioImaging ERIC** (European Research Infrastructure for Imaging Technologies in Biological and Biomedical Sciences),
- **European Spallation Source-ERIC**,
- **EU-OPENSOURCE ERIC** (European Infrastructure of Open Screening Platforms for Chemical Biology),
- **ICOS ERIC** (Integrated Carbon Observation System),
- **Instruct ERIC** (European Integrated Structural Biology Infrastructure),
- **SHARE-ERIC** (Survey of Health, Ageing and Retirement in Europe).

The competent decision-making body is the Ministry of Education (which is responsible for international collaboration in R&D and large research infrastructures). In the process, the MEYS will continue to take into account the outcomes of international evaluation of the Czech large research infrastructure which is to join the pan-European infrastructure. The Ministry will only accept the obligation if funding is allocated to the infrastructure by a resolution of Czech government.

There are some international research infrastructures which have not been established under ERIC or public international law but under legislation of their host countries (Jules Horowitz Reactor). The state is not a member in these entities and does not perform any member obligations, such as payment of the membership fee. Large research infrastructures of this kind operate as “access points” to international research infrastructures and the project holder handles on behalf of the community of users in the Czech Republic the matters which are dealt with by the Ministry of Education on behalf of the country in those entities which have been established according to public international law or ERIC. There is a special type of research infrastructures in the Czech Republic which are not funded from grants for large research infrastructures but through other legal frameworks. These are LRIs in which the Czech Republic is a member state (e.g., CERN, EMBC, EMBL, ESA), as described in other chapters.

The Ministry of Education of the Czech Republic financially supports direct engagement of Czech large research infrastructures in international large research infrastructures. Those include, for instance:

- **BNL** (*Brookhaven National Laboratory – United States of America*);

- **CTA** (*Cherenkov Telescope Array – Chile, Spain*);
- **FAIR** (*Facility for Antiproton and Ion Research – Germany*);
- **Fermilab** (*Fermi National Accelerator Laboratory – United States of America*);
- **ILL** (*Institut Laue-Langevin – France*);
- **JHR** (*Jules Horowitz Reactor – France*);
- **LSM** (*Laboratoire Souterrain de Modane – France*);
- **Pierre Auger Observatory** (*Argentina*);
- **SPIRAL** (*Système de Production d'Ions Radioactifs Accélérés en Ligne – France*).

The Ministry of Education of the Czech Republic will continue to support the integration of Czech large research infrastructures into ERIC infrastructures, as well as those infrastructures established according to national regulations. The support will be part of the support for large research infrastructures of the Czech Republic, based on the outcomes of international evaluation and will depend on funding allocated by Czech government resolutions.

Further information can be found at this address:

<http://www.msmt.cz/vyzkum-a-vyvoj-2/velke-infrastruktury-vyzkumu>

<https://www.vyzkumne-infrastruktury.cz/>

6.2.4 Road map

The Road Map for the Czech Republic is based on the ESFRI Road Map, which was developed for the first time in 2006. The last update was made in 2018 and the next is planned for 2021. The ESFRI road map as an analytical study covers European research infrastructures which were either implemented by the host countries or are under preparation or construction, and places them in the context of the European landscape of research infrastructures. The road map of large research infrastructures in the Czech Republic includes a strategic model for support of large research infrastructures for 2016-2022 which stresses effective use of Czech government funding and ESIF funds, specifically those from RDEOP. This model presents a complementary and highly efficient use of both budget sources. It gives information on all 48 large research infrastructures in physics, power generation, environmental sciences, biomedicine, social sciences and humanities and ICT which are to receive aid from public funds of the Czech Republic until 2022. The latest update to the Road Map of the Czech Republic made in 2019 followed the approval of funding for large research infrastructures until 2022. The Road Map of the Czech Republic for large research infrastructures includes exclusively those large research infrastructures for which the government approved funding through specific-purpose support of the Ministry of Education until 2022, which makes them eligible to take part in the complementary call under RDEOP for their investment costs.

6.3 Development and international cooperation institutions

Several institutions are active in securing and arranging international cooperation in the Czech Republic. The prominent ones are listed below.

6.3.1 CZERA 3

Since 2013, comprehensive support for the participation of Czech organisations in ERA has been provided under the CZERA (Czech Republic in ERA) infrastructure project, specifically under its Module III. As part of the CZERA 3 project, the Technology Centre AS CR runs the NCP service (National Contact Person) for FP9. CZERA 3 (Interexcellence) follows on from the research infrastructure project CZERA 2 (Czech Republic in the European Research Area 2015-2017) and CZERA and secures their continuity, as well as additional expanding and innovative activities. CZERA

3 is an expert framework for a wide range of consultancy and support services for proposers and project participants in Horizon 2020 and analytical and information services for decision-makers developing the RDI policy, particularly in the field of international scientific cooperation. The project comprises eight activity groups which correspond to the requirements of the European Commission for the nationwide NCP system. Professional analytical services are purposefully linked to the programme to enable public administration and RDI organisations to acquire structured information and source documents for strategic decision-making.

6.3.2 Czech Liaison Office in Brussels – CZELO

The Czech Liaison Office (CZELO) was established in Brussels in 2005. It is run by the Technology Centre of AS CR, and supported from a grant of the Ministry of Education. The office facilitates the information exchange between the European Commission and the Czech research community.

It aims to involve Czech partners in the European research cooperation through framework programmes. The office provides its services to researchers in all disciplines and to research organisations in the Czech Republic free of charge. Similar offices in Brussels are run by many other Member States. All of them are associated in the informal IGLO network.

CZELO is funded from the INTER-EXCELLENCE programme of the Ministry of Education and is run by the Technology Centre AS CR. The office is part of the Czech network of regional and sectoral contact organisations which provide services in respect of EU-NINET framework programmes. It cooperates with the National Information Centre for European Research, i.e., the group of national contact persons for framework programmes (NICER). The services are offered by the office free of charge. In 2017, project CZELO 4 (LT17010) was launched, which is to be completed at the end of 2020.

More information about the programme, including contacts, can be found at the following addresses:
www.iglortd.org
www.czelo.cz

6.3.3 Enterprise Europe Network (EEN)

EEN provides professional services for boosting competitiveness primarily among small and medium-sized enterprises. The goal is to help them exploit the business opportunities of the single market of the EU as well as the markets outside the Union. Activities of the network include assistance in international technology transfer, support in seeking foreign business contacts and project partners of international research and technical cooperation. The network offers consultancy in matters of intellectual property and seeks funding for innovation projects.

EEN operates in more than 60 countries across the globe, bringing together more than 600 entrepreneurship-supporting organisations. In the Czech Republic, it is represented by Enterprise Europe Network Česká republika, which is a consortium of six partners coordinated by the Technology Centre AS CR. EEN ČR is funded by the European Union under the COSME programme and by the Ministry of Industry and Trade.

More information about the programme, including contacts, can be found at the following address:
<https://www.enterprise-europe-network.cz/>

6.3.4 EURAXESS

International mobility in the Czech Republic is facilitated by EURAXESS, a network of centres coordinated by the Centre of Administration and Operations of the AS CR with long-term financial support from the Ministry of Education. The network offers comprehensive information services regarding international mobility to foreign and Czech researchers (and their families).

More information about the programme, including contacts, can be found at the following address:
<https://www.euraxess.cz/cs>

6.4 International activities of Czech Science Foundation

This type of collaboration focuses on joint bilateral grant-funded projects. Proposals for international projects in the English language are submitted as tenders to both agencies. They must conform to all requirements set by CSF and the other national agency. Public tenders are expected to be held on an annual basis, typically at the turn of February. The project duration is 2–3 years. Project proposals should be based on complementary methodologies and procedures. Each project proposal should include a responsible investigator on the Czech part and another one in the other country. At Czech Science Foundation, project proposals are submitted via on-line application GRIS. Czech applicants are required to follow the tender dossier applicable to the year of project submission. The current cooperation involves the following partners:

- Taiwan
- South Korea
- Germany
- São Paulo
- Russia

More information about the programme, including contacts, can be found at the following address:
<https://gacr.cz/mezinarodni-aktivita/bilateralni-spoluprace/>

Czech Science Foundation is a member of other international structures which foster effective cooperation in research and development.

6.4.1 Science Europe (SE)

Science Europe (SE) is an association of European Research Funding Organisations (RFO) and Research Performing Organisations (RPO). SE takes over and develops numerous activities previously realized by ESF, which wound down its activities at the end of 2015.

SE was established in 2011 and is based in Brussels. It comprises 52 organisations from 27 European countries. The Czech Science Foundation, one of its founding members, is currently the only member from the Czech Republic. SE also cooperates with other entities, such as European universities and academies, European scientific intergovernmental organisations, governments, and the European Commission. It also helps develop the European Research Area (ERA) through its direct negotiations with key partners.

This association's main interests include coordination of actions and strategies of European organisations which support and carry out research, in order to boost the competitiveness of the European research and science sector across the globe. SE therefore supports the activities of each member organisation, as well as their cooperation in strategic terms or specific tasks. SE collaborates with research organisations based outside Europe. It champions the interests of the scientific community to ensure that, in collaboration with the European Commission, the contributions of member organisations to the development of ERA are maximised and that publicly funded research and innovation in Europe has the maximum impact, contributing to the development of the economy and providing solutions to deliver societal benefit.

One of the Czech Science Foundation's main interests within the SE is the Open Access issue, i.e. the accessibility of scientific data and outputs

More information about the programme, including contacts, can be found at the following address:
<https://gacr.cz/mezinarodni-aktivita/science-europe/>

6.4.2 Global Research Council

The Global Research Council (GRC) was established in 2012. The Czech Science Foundation is one of its founding members. The GRC brings together national science funding agencies for basic research from Europe, Asia, Africa, Latin America and the USA. The core ideas for establishing the

organisation were to provide a forum for communication and cooperation among funding agencies, advancing shared interests and principles of science funding, sharing best practices with basic research funding in various countries, coordinating the sharing of information and data, and supporting excellent research and excellent research teams across all continents.

More information about the programme, including contacts, can be found at the following address:

<https://gacr.cz/global-research-council/>

6.4.3 CEUS

In 2019, the leaders of CSF, FWF (Austria), NCN (Poland) and ARRS (Slovenia) signed CEUS – the Central European Science Partnership Lead Agency Agreement: Memorandum of Understanding on the unilateral administration and mutual recognition of evaluation procedures. This new partnership will enable researchers from the Czech Republic, Austria, Poland and Slovenia to conduct research projects in collaboration with new foreign partners. In the framework of CEUS, an initiative promoting basic research in Central Europe, researchers are now able to propose bilateral and trilateral projects under the Lead Agency principle. The fundamental criterion for identifying the lead agency is the agreement of the international research team as to the origin of the key theme to be investigated in the project and as to the volume of the budget for the international team which submits the project proposal.

More information about the programme, including contacts, can be found at the following address:

<https://gacr.cz/mezinarodni-aktivita/la-spoluprace/>

6.5 International activities of the Technology Agency of the Czech Republic

TA CR cooperates with numerous foreign partners on multiple levels. One of them is the Finnish agency TEKES. Although Finland went through a deep crisis in the 1990s, it was finally able to turn things around. Its economy was restructured, incorporating new industrial sectors and innovation as its basis. Other notable foreign partners include the Zhejiang Tong Xiang International Chamber of Commerce, the Korea Institute for Industrial Technology (KITECH), and the National Centre for Research and Development (NCBR). An important segment of international cooperation of TA CR involves agencies from Visegrad Group countries. Know-how and best practice procedures are exchanged in order to foster research, development and innovation.

Information on the international activities of TA CR is available at:

<https://www.tacr.cz/o-nas/mezinarodni-spoluprace/>

6.5.1 DELTA 2 programme

The DELTA 2 programme focuses on bilateral international cooperation between research teams based in the Czech Republic and abroad and provides funding for projects of this kind for the 2020-2025 period. The programme supports acquisition of knowledge and skills which lead to new products, processes and services or to their substantial improvement. Delta focuses on collaboration with partners most of whom are based outside the EU (Asia, South and North America). For a grant to be awarded, the project must win support from both the Czech (Technology Agency of the Czech Republic) and foreign parties (foreign agency). About three months prior to a public tender under DELTA 2, the list of foreign organisations involved is published. The programme covers projects in all disciplines of research, development and innovation. The last public tender is expected to be announced in 2023. The total allocation of the programme is CZK 1.2 billion and the maximum aid rate is 74% of the eligible project costs.

More information about the programme, including contacts, can be found at the following address:

<https://www.tacr.cz/program/program-delta-2/>

6.5.2 Kappa programme

In 2018, the Technology Agency of the Czech Republic took over administration of part of Norway Grants and announced the KAPPA funding programme and conditions for cooperation in research and development with partners from Norway and other countries. The programme focuses on international

cooperation between Czech entities and partners from Norway, Iceland and Liechtenstein in applied research, and promotes contacts between research organisations and users of the outputs of applied research, experimental development and innovation, i.e. with industry, businesses and other domestic and international entities with their roots in various parts of society. There is no central theme to the programme (except for the condition imposed by Norway that approximately 30% of the total funds from Norway Grants goes towards projects for carbon capture and storage). The programme aims to ensure that public funding of applied research translates into economic or other societal benefits. The programme is expected to attract industrial research projects (with some necessary activities of oriented basic research) and projects involving predominantly experimental development. One of its purposes is to deliver synergistic and complementary effects in international schemes, such as H2020 and other EU programmes, and in international programmes with compatible orientations.

The total specific-purpose expenditure of the programme amounts to CZK 780,564,696. The specific-purpose funding from the EEA and Norwegian financial mechanisms reaches CZK 663,480,000 and the specific-purpose state budget expenses (the TA CR budget heading) are CZK 117,084,696. The expected average aid intensity for this programme is 80%.

The programme is planned for 5 years from 2020 to 2024. The first public tender for projects under the programme is yet to be specified. Over the programme period, one or two public tenders are to be announced. The minimum project period under this programme is 24 months. The maximum project period is 5 years. All projects must be completed before 30 April 2024.

More information about the programme, including contacts, can be found at the following address:

<https://tacr.cz/index.php/cz/programy/program-kappa.html>

6.5.3 Cofund calls

ERA-NET Cofund is one of the mechanisms of Horizon 2020, a European framework programme for research and innovation (until 2025), which enables public funding providers from individual member states (such as the Technology Agency of the Czech Republic), associated countries and some non-European countries to issue calls for proposals for agreed themes. Applicants submit their proposals for consortia of international partners. Each public funding provider is responsible for financing the successful applicants from their country as selected on the international level. The list of foreign organisations involved in the call is published before the call is announced. As a public funding provider, the Technology Agency of the Czech Republic takes part in cofund calls under ERA-NET in nanomedicine, biodiversity and climate, water pollution, ICST, non-agricultural materials, innovative materials, and gender in research and innovation. Additional themes, such as transportation and power generation, are under preparation. The themes of current calls are published under the International Cooperation tab. The allocated funds of the Technology Agency of the Czech Republic for individual cofund calls under ERA-NET may differ but tend to vary around EUR 1 million. The maximum aid rate for the Czech part of the project is 70-100% of the eligible project costs. In the Czech Republic, both research organisations and businesses are eligible candidates.

More information about these activities, including contacts, can be found at the following address:

<https://www.tacr.cz/mezinarodni-spoluprace/>

6.5.4 TAFTIE

TAFTIE is a European network of leading national innovation agencies. Its members contribute a great deal to strengthening Europe's economic performance by promoting innovation through implementing national and often international programmes in research, development and innovation. Membership in the network provides TACR with access to an enormous source of information and experience, which can be used in further development and in the preparation of further programmes of applied research, experimental development and innovation.

More information about these activities, including contacts, can be found at the following address:

<https://www.tacr.cz/o-nas/mezinarodni-spoluprace/taftie/>

7 OTHER ACTIVITIES OF INTERNATIONAL COOPERATION

The Czech Republic is a member of numerous international organisations which support research and development. It also pursues collaboration through bilateral programmes. The core of these activities is administered by the Czech Ministry of Education.

7.1. Memorandum of Cooperation

Agreements for R&D cooperation have been made with partners in several countries. Cooperation with these countries takes the form of separate calls or other programmes, such as INTER-EXCELLENCE.

7.1.1 Czech-Bavarian R&D cooperation

The Ministry of Education of the Czech Republic and the Bavarian State Ministry for Education, Science and the Arts announce joint calls for proposals of joint Czech-Bavarian research projects. The basis for these calls is the Joint Declaration of Intent of Scientific Cooperation between the Ministry of Education of the Czech Republic, and the Bavarian State Ministry for Education, Science and the Arts signed on 3 July 2014 in Prague.

Further information can be found at this address:

www.msmt.cz/vyzkum-a-vyvoj-2/cesko-bavorska-spoluprace-ve-vav

7.1.2 Czech-Chinese RDI cooperation

International cooperation between research facilities in the Czech Republic and People's Republic of China is based on the intergovernmental Agreement for Cooperation in Science and Technology signed on 1 June 1995, and on the Memorandum of Understanding for Joint Research and Development between the Ministry of Education of the Czech Republic and the Ministry of Science and Technology of the People's Republic of China, which was signed on 23 March 2016 in Prague.

Further information can be found at this address:

www.msmt.cz/vyzkum-a-vyvoj-2/cesko-cinska-spoluprace

7.1.3 Czech-Israeli RDI cooperation

On 25 November 2014, the Joint Declaration of Cooperation in Research and Development of the Czech Deputy Prime Minister for Science, Research and Innovation, and the Ministry of Science, Technology and Space of the State of Israel was signed in Jerusalem. On its basis, the Ministry of Education of the Czech Republic announce calls for proposals of Czech-Israeli projects in basic research or industrial research. The themes of these projects were set as the “environmental protection technology: pollution prevention and removal of contaminants from the air, soil and water sources” and “information and communication technologies with emphasis on data processing, transfer and storage”.

The proposal of a joint research project must be submitted simultaneously by the Czech part of the team in the Czech Republic and by the Israeli part of the team in Israel and must comply with the criteria set by the respective support provider. The topics and contents of the proposals submitted separately by both teams in their countries must match. The aid intensity is 100% for basic research and 50% for applied research.

Further information can be found at this address:

www.msmt.cz/vyzkum-a-vyvoj-2/cesko-izraelska-spoluprace-ve-vavai

7.1.4 Czech-Japanese RDI cooperation

This cooperation has been launched by the Memorandum of Cooperation in Planning and Implementing Joint Calls EIG CONCERT-Japan signed by the Czech Ministry of Education on 13 July 2017. The goal of the Memorandum is to strengthen cooperation between European countries and Japan in science and innovation research, tackle today's societal challenges and meet societal needs,

and provide support for international multilateral research cooperation through planning, launching and implementing joint calls.

Project proposals are to be submitted via an on-line application to the European Interest Group for Collaboration with Japan (EIG CONCERT Japan). Czech applicants are required to submit the project proposal to MEYS as well, in accordance with instructions for the call.

The funding from MEYS enables participants to use it for salaries of scientists from academia, research organisations and small and medium-sized enterprises operating in both basic and industrial research. The funding is intended for joint projects involving purchasing of minor tangible assets, materials for research, personnel costs, the costs of mobility (costs of stay and travel).

Further information can be found at this address:

<http://www.msmt.cz/vyzkum-a-vyvoj-2/cesko-japonska-spoluprace>

7.4 Czech-Norwegian research programme

The CZ09 programme has ended but tools for a new programming period are being implemented. Priority areas aligned to EU priorities are outlined in “Blue Book”, reflecting the major challenges that Europe is facing. Open calls are launched by agents responsible for relevant programmes. The agent responsible for most programmes (most of them are non-R&D) is the Ministry of Finance of the Czech Republic, acting as the National Focal Point for EEA financial mechanisms and Norway Grants in the Czech Republic. Agents for the CZ09 programme area – Fund for Research Support include the Ministry of Education and the Technology Agency of the Czech Republic.

Further information can be found at these addresses:

www.eeagrants.org/

www.msmt.cz/vyzkum-a-vyvoj-2/norske-fondy

7.3 Cooperation between the EU and the Russian Federation (ISTC) and Ukraine (STCU)

International cooperation pursued by the EU in research and development includes the support of research and development in the Russian Federation and Ukraine. This effort aims to help reorientate military research towards civilian purposes. As part of this effort, the International Science and Technology Centre (ISTC) in the Russian Federation, and the Science and Technology Centre in Ukraine (STCU) have been established.

They organise cooperation in science and technology between the facilities in the EU Member States, and in the Russian Federation and Ukraine. ISTC and STCU are intergovernmental organisations founded in 1992 based on an agreement between the EU, USA, Japan, and the Russian Federation (and Ukraine).

Their objective is to offer highly-qualified scientists in military research programmes in the former Soviet Union an opportunity to apply their talent to civilian activities.

Further information can be found at these addresses:

www.istc.int

www.stcu.int

<https://www.evropskyvyzkum.cz/cs/nastroje-spoluprace/mezinarodni-organizace/stcu-istc>

7.4 The Fulbright Commission

The Fulbright Commission is a state institution established by the Czech Ministry of Education and funded by contributions from the state budget. The work of the Commission is co-financed by the governments of the United States and the Czech Republic. The American side bears all personnel costs (wages, costs, and benefits) and the operating costs of the Advising Centre, which provides information about study in the United States. The Czech side bears the operating costs of the office space. Scholarship programmes are co- financed by both partner states.

The main objective of the Fulbright Commission is to support educational, scientific and cultural exchanges between the Czech Republic and the United States of America. The Commission offers scholarships, grants and other programmes for study, teaching and research in the Czech Republic and the United States. It receives and processes proposals, organises selection procedures and assists Czech scholarship holders with their study in the United States, and selects and supports American scholarship holders in the Czech Republic.

Further information can be found at this address:
www.fulbright.cz

7.5 NATO Science Programmes – Civilian Research

Science for Peace and Security Committee (SPS)

The Science for Peace and Security (SPS) Committee formed by a merger of the Science Committee and the Committee on the Challenges of Modern Society in order to support international cooperation in science and innovation. The objective of the SPS Committee is to contribute to the security, sustainable development, stability and solidarity among nations through cooperation, infrastructure expansion, democratic development, and fostering economic growth. The SPS Programme is funded from the NATO budget. Applications are submitted by scientists or developed by the SPS secretariat or, on the national level, drafted by individual countries.

The SPS Programme awards grants to scientists from NATO and partner countries, and the Mediterranean Dialogue countries. Grants are also provided to academic institutions in partner states for the development of computer infrastructure and optimisation of electronic communication. As a rule, there must be cooperation between scientists from NATO countries and scientists from partner states or Mediterranean Dialogue countries. Applications are submitted to the NATO headquarters for evaluation. For individual disciplines, there are committees of international experts, which convene three times a year to evaluate the applications.

Those eligible for grants are scientists from the NATO countries, partner states and Mediterranean Dialogue countries. Each application must be submitted jointly by an applicant from a NATO country and an applicant from a partner or Mediterranean Dialogue country. The proposals often involve partners from other NATO and partner countries, and Mediterranean Dialogue countries, depending on the subject.

Applications can be submitted at any time. The dates of individual rounds are 1 March, 1 July and 1 November.

Applications for funding from national resources must be developed by individual states in accordance with the guidelines. They should focus on the key priorities defined by the SPS Committee.

The priorities have three main categories:

- Counter-terrorism,
- Meeting other security challenges,
- Priorities of partner countries.

The grant mechanisms under the programme include: Pilot studies for 3–5 years, short-term projects with a specific focus taking 12–24 months, and topical workshops. Support grants facilitate the participation of foreign experts in national projects.

NATO – Russia Council (NCR)

This is a specific programme aimed at supporting cooperation between scientists from Russia and NATO countries in seven priority areas: detection of explosives, psychological and social ramifications of terrorism, disaster prediction and prevention, CBRN defence, cyber security, transportation security, including border security, and issues related to environment protection. No deadlines were set for

submitting applications, with individual rounds taking place on the following dates: 1 March, 1 July and 1 November.

Further information can be found at this address:
www.nato.int/science/about_sps/introduction.htm

7.6 European Space Agency (ESA)

The European Space Agency (ESA) is an intergovernmental organisation for space research and technologies, and their applications. The ESA's mission is to coordinate and harmonise the European astronautic strategies and policies, expand the scientific knowledge about our planet, the Solar System and space, and about materials and living organisms using the International Space Station, satellites and interplanetary probes, and mobilize a broad technical base and support of the European industry to produce and operate space systems and ground infrastructure, and use technical knowledge and skills to meet the ever increasing demands of the society and the market.

The ESA activity programme and its scope is defined by the ESA Ministerial Council, depending on available funding. The Council convenes once in every two or three years, attended by designated ministers from the Member Countries.

The ESA's activity is managed by the ESA Council and its Committees (Industrial Policy Committee, Scientific Programme Committee, Administration and Finance Committee, and International Relations Committee). ESA optional programmes are managed by Programme Committees. All these bodies are composed of delegates of Member Countries and, where relevant, countries involved in the optional programme. The Czech Republic became an ESA member on 12 November 2008. The ESA activities are divided into mandatory and optional ones.

The mandatory activities include the General Studies Programme, Science Programme, Science Core Technology Programme, and the Technology Transfer Programme. Then there are the Innovation Triangle Initiative (ITI), the Basic Technology Research Programme, Centre Spatial Guyanais, and programmes of Experiments for University Students (BEXUS and REXUS).

The Czech Republic takes part in the optional programmes of scientific research (PRODEX), technology programmes (GSTP), programmes of life sciences studying microgravity conditions (ELIPS), Earth observation (EOEP), development of meteorological satellites and satellites for Earth observation (MTG and MetOp-SG), Mars robotic exploration (MREP), space weather and near-Earth objects (SSA-SWE and SSA-NEO), development of launchers and space vehicles (FLPP), navigation (EGEP), and research in telecommunications (ARTES 1, ARTES 5, ARTES 14, ARTES 20).

Further information can be found at these addresses:
www.czechspace.cz
www.esa.int/esaCP/Czech.html

7.6.1 Programme for development of scientific experiments (PRODEX)

PRODEX (PROgramme de Développement d'Expériences scientifiques) is an optional programme of ESA intended primarily for funding the development and construction of scientific instruments and experiments designed by research facilities in ESA member states for research into outer space and celestial objects and for research in other relevant domains, such as microgravity, remote sensing and others. The idea behind PRODEX was to enable costly experiments of this kind to be funded in small ESA member states and to promote collaboration between research facilities and industrial companies. PRODEX is managed by the Netherlands-based ESA PRODEX Office (ESTEC). The Head of the PRODEX Office reports to the Director of Science at ESA and communicates directly with delegates from individual member states. Czech participation in a project is subject to approval by the Czech delegation in the ESA, i.e. by the Ministry of Education of the Czech Republic (MEYS). The annual contribution from the MEYS for 2017– 2021 is €2.2 million.

Further information can be found at this address:

<http://www.msmt.cz/vyzkum-a-vyvoj-2/evropska-kosmicka-agentura-program-vyvoje-vedeckych>

7.7 EMBC, EMBO, EMBL and the ELIXIR project

The European Molecular Biology Conference – EMBC is an intergovernmental organisation supporting activities in molecular biology and related fields.

The European Molecular Biology Laboratory (EMBL) is an international research organisation established in 1973 by EMBC member countries. With its headquarters in Heidelberg, Germany, it brings together 21 European countries which are also members of the EMBC. It has built the most important and technologically most advanced European research infrastructure for molecular biology and genetics. Its research activities are pursued in five sites: Heidelberg, Cambridge, Grenoble, Hamburg, and Monterotondo. In June 2013, the EMBL Council approved an official application of the Czech government for membership. Full membership was granted to the country in 2014 after a ratification procedure. The motivation for joining the organisation was the prospect of integrating the Czech research centres Central European Institute of Technology (CEITEC), Biotechnology and Biomedicine Center of the Academy of Sciences and Charles University in Vestec (BIOCEV) and the International Clinical Research Center of St. Anne's University Hospital Brno (FNUSA-ICRC) into broad international cooperation. The access is, however, very valuable for a number of other research facilities as well (the Institute of Molecular Genetics of the Academy of Sciences of the Czech Republic, the Institute of Macromolecular Chemistry of Academy of Sciences of the Czech Republic, the Institute of Biophysics of the Academy of Sciences of the Czech Republic, Masaryk University in Brno, Charles University, and the Institute of Chemical Technology Prague). More detailed information on EMBL can be found at <http://www.embl.org>.

The European Molecular Biology Organisation (EMBO) is a non-governmental organisation whose members are leading European scientists from the various fields of molecular biology. EMBO is in charge of implementing the EMBC General Programme. Therefore, the individual activities under the General Programme carry the EMBO name.

Each year, EMBC and EMBO jointly award more than 600 scholarships for research, and organise more than 70 courses and conferences. There are two deadlines for applications, 15 February and 15 August.

The EMBO Young Investigators programme aims at excellent young scientists in the first years of establishing their research laboratories. Being selected for this programme equals a prestigious recognition of the quality of one's scientific work. Those selected receive a three-year grant of €15,000 per year, and have a unique opportunity to meet previous awardees and EMBO members. The application deadline is 1 April.

A special Installation Grant programme was launched in selected EMBC Member States, including the Czech Republic, to support research in molecular biology and related sciences. The grants are intended for research team leaders who plan to establish their own laboratory, have an excellent publication record, and had received an offer from an organisation to host such laboratory. In addition, the applicants must have worked for at least two consecutive years outside the planned host country. The application deadline is 15 April each year.

The EMBC also supports the EMBO Science for Society programme, which promotes dialogue between scientists and the society, and the Electronic Information Programme which provides web-based services for the EMBO science community.

EMBC funds various prestigious Europe-wide meetings to foster cooperation, exchange of experience, and advances in molecular biology. Their annual attendance is more than 5,000 scientists. Hands-on

courses enable them to acquire new skills for state-of-the-art techniques, and workshops provide a discussion forum for various fields.

In 2011, the ELIXIR infrastructure project was launched under the auspices of EMBL. Its objective is to build and maintain a Europe-wide distributed infrastructure for acquisition, classification, storage, and dissemination of data from molecular biology research projects across a range of life sciences: biology, chemistry, medicine, pharmacy, and others. The project headquarters are in Hinxton, UK. Today, a total of 12 countries are taking part in the project, and another 6 have signed the Memorandum of Understanding. The project has been included in the ESFRI Roadmap, as well as in the Roadmap of Large Infrastructures for Research, Experimental Development and Innovation of the Czech Republic. Having signed the ELIXIR Consortium Agreement in November 2013, the Czech Republic has become one of the five founding members of the consortium. The Czech national Node entitled "ELIXIR-CZ" now operates under the coordination of the Institute of Organic Chemistry and Biochemistry of the Academy of Sciences of the Czech Republic.

Further information can be found at these addresses:

www.elixir-europe.org

www.embo.org

7.8 Organisation for Economic Cooperation and Development (OECD)

The Organisation for Economic Cooperation and Development is an intergovernmental organisation of 34 countries from around the world. The Czech Republic has been a member since 1995.

The Czech Ministry of Education (MEYS) represents the Czech Republic on the Committee for Scientific and Technological Policy, and in its working groups: Technology and Innovation Policy, Working Party on Biotechnology, and Working Party on Nanotechnology. MEYS contributes to the cooperation in research and development by drafting reports and processing extensive questionnaires which serve as source documents for OECD analyses and studies and, most notably, the Science, Technology and Industry Outlook, which offers a comparative analysis of policies and tools across the OECD and many developing countries. In addition, the MEYS contributes to thematic projects of the working groups (most recently the "Innovation-driven Growth in Regions: The Role of Smart Specialisation" project, and "Financing, Transferring and Commercialising Knowledge") as well as OECD's horizontal projects (e.g. the Innovation Strategy, and the Green Growth Strategy). The objective is to use the outputs and concrete recommendations from these projects to shape national policy and strategy. The MEYS is working on matters related to research organisations in horizontal thematic projects of new technologies, which are seen as the basis of economic growth and collaboration between the public and private sectors (e.g. the Innovation Strategy, and the Green Growth Strategy). Other topics include recruiting human resources, acquiring knowledge, skills, and fostering career growth, as well as international cooperation in the context of the growing importance of exploitation and sharing of R&D experience among OECD Member States.

OECD's committees employ the analytical and multidisciplinary approach for formulating qualified recommendations for dealing with today's problems. The nature of these challenges requires closer collaboration with some non-member countries and international organisations as well.

Further information can be found at this address:

www.oecd.org

7.9 European Southern Observatory (ESO)

Since 2007, the Czech Republic has been a regular member of the European Organisation for Astronomical Research in the Southern Hemisphere, also known as the European Southern Observatory. This international organisation brings together 16 countries. ESO operates multiple sites, including the technologically most advanced astronomical observatory on the Paranal Mountain in Chile. Together with partners from the USA, Canada, Brazil, South Korea and Japan, it is a member of the ALMA consortium which operates the largest ground-based array of antennas for observation outside the visible light range on Llano de Chajnantor in the Atacama Desert in Chile. ESO's current

effort focuses on building the European Extremely Large optical/infrared Telescope (E-ELT) by 2021, the largest mirror-based telescope in the world. The ESO headquarters are located in Garching, near Munich, Germany. It is the scientific, technical and administrative centre of ESO. Astronomers in the Czech Republic can benefit from the ESO membership through using unique ESO observation technologies in their projects, and Czech doctoral students have an opportunity to complete internships in state-of-the-art observatories. Finally, enterprises from the Czech Republic can compete for the organisation's contracts in mechanics, optics, software and other fields.

Further information can be found at this address:

www.eso.org/public

7.10 European Organization for Nuclear Research (CERN) and the Joint Institute for Nuclear Research (JINR) in Dubna

The Czech Republic is a regular member of CERN and JINR Dubna, international organisations for research in nuclear and subnuclear physics and high-energy physics. The cooperation is maintained by the Committee for Cooperation with the CERN and the Committee for Cooperation with the JINR Dubna. The matters of both memberships are managed and funded by the Ministry of Education (O31 – The Department of Research and Development of the MEYS). Projects involving partnership with CERN and JINR are co-funded from the INGO II programme.

Specific-purpose funding is provided by the Ministry of Education for the participation of Czech institutions in major CERN programmes, such as ATLAS, ALICE, COMPASS, TOTEM, and others. The collaboration of Czech facilities with JINR in joint projects is funded from the Czech contribution to JINR.

7.11 The Danube Region Cooperation

The Strategy for the Danube Region is one of the most recent macro-regional strategies in Europe. It was formed in regions of extreme historical and political diversity during a prolonged economic and political crisis. The macro-regional strategy promotes intensive collaboration, particularly in education, research and innovation. The Strategy for the Danube Region is an EU strategy which also involves non-member states in the catchment area of the Danube River. As this area covers more than 800,000 square kilometres with more than 100 million inhabitants, the support for the Strategy has been growing continuously in recent years.

The scope and content of the Strategy for the Danube Region and its Action Plan concern all major fields of natural and social sciences. A coordinated approach to common issues of the Danube Region and adjacent areas based on clarity and communication among all stakeholders leads to effective solutions which unlock the immense potential of the region. The Ministry of Education of the Czech Republic joined the DANUBE-INCO.NET coordination network under its PA7 project. Priority Axis 7 focuses on developing the knowledge society through research, education and utilisation of information technologies. Its ambition is to deliver on the priorities of the Danube Region Strategy.

Coordinators promote collaboration on preparing international projects aimed at improving the quality of life in the region. The steering committee evaluates project proposals which aim to support the development of the knowledge society in the Danube Region. These flagship and pilot projects build on the themes of the H2020 framework programme for research and innovation. The EU Strategy for the Danube Region has the potential to become an extensive European project.

7.12 Other institutions in international cooperation

7.12.1 Central European Initiative

The Central European Initiative (CEI) is a regional cooperation organisation with 18 member states, which supports non-EU members in their integration into the EU. It fosters their transformation and regional cooperation in a number of thematic areas, including research and development. CEI focuses on strengthening cohesion and solidarity in Europe and preventing new dividing lines on the continent.

Further information can be found at this address:

www.ceinet.org

7.12.2 Visegrad Group

The Visegrad Group reflects the effort of the countries of the Central European region to work together in a number of fields of common interest. The cooperation takes place through meetings on many levels. The working group of ministers or deputy ministers (often including the Slovenian Republic as well) convenes on an annual basis in one of the Member States to exchange experience and align policies for participating in EU programmes and projects.

The goals of the fund are achieved through financing provided for relevant projects. Legal or natural persons may only apply for funding for concrete projects. In selecting projects for awarding funding, the fund puts emphasis on those which involve the largest groups of entities from V4 countries. The activity of the fund is made possible by regular contributions from its parties. The fund's budget continues to increase year on year. Most grants reach 70% of the total costs of the project.

Further information can be found at this address:

<https://www.visegradfund.org/>

<http://www.msmt.cz/vyzkum-a-vyvoj-2/visegradska-skupina>

7.12.3 Salzburg Forum

The Salzburg Forum is an initiative of ministers of the interior of 9 countries meeting annually in Salzburg, Austria to promote political cooperation. Some discussions to harmonise views of the members also take place during the Competitiveness Council meetings. In the Salzburg Declaration (8/2009), the Member States pledged to maximise the benefits of the European Research Area. Another objective of the Salzburg Forum is to offer expertise and political support to future presidencies of the Salzburg Forum.

Further information can be found at this address:

www.evropskyvyzkum.cz/cs/nastroje-spoluprace/mezinarodni-programy-podpory/salcburska-skupina

7.12.4 Von Kármán Institute for Fluid Dynamics (VKI)

The international association that conducts research and provides education for experts in fluid dynamics was founded in 1956. Its objective was to develop the qualification and skill levels of experts in the construction of aircraft and aircraft propulsion and experts in liquid mechanics. The association also disseminates recent findings in fluid mechanics, and findings from its own theoretical and experimental research into numerical methods in internal and external aerodynamics.

Further information can be found at this address:

www.vki.ac.be

7.12.5 ARTEMIS, ENIAC and ECSEL partnerships

By co-funding the costs of participation of domestic research organisations and enterprises in projects of the Joint Technology Initiatives known as the former ARTEMIS joint undertaking and the current ENIAC initiative, the Ministry of Education of the Czech Republic (MEYS) supports cooperation between the public research sector and enterprises, and their involvement in international R&D projects concerning embedded computing systems, microelectronics and nanoelectronics.

ARTEMIS (Advanced Research & Technology for Embedded Intelligence and Systems) and ENIAC (European Nanoelectronics Initiative Advisory Council) have been established as long-term public-private-partnerships with the support of the European Commission. To make these partnerships real, new legal entities, so-called joint undertakings, were established in 2008 in accordance with Article 187 of the Treaty on the Functioning of the European Union. Unlike in the IMI (Innovative Medicines Initiative) JTI, the FCH (Fuel Cells and Hydrogen) JTI, and the Clean Sky (Aeronautics and Air Transport) JTI, where the majority of the public funding is provided by the European Commission, ENIAC and ARTEMIS projects are co-funded to a great extent by the Member States, and the contribution from the European Commission is no more than 16.7 % for ARTEMIS and 15 % for ENIAC projects.

MEYS has been supporting the involvement of Czech research organisations and enterprises in ARTEMIS and ENIAC projects since 2009. The MEYS contribution is governed by the Community Framework for State Aid for Research, Development and Innovation (2006/C 323/01). Research organisations can receive up to 83.3 % of the total approved costs for ARTEMIS projects and 85 % for ENIAC projects. SMEs are eligible for contributions up to 63.3 % of the total approved costs under ARTEMIS and 65 % under ENIAC. The funding for large enterprises can reach 33.3 % of the total approved costs for ARTEMIS projects and 35 % for ENIAC projects. The aid intensity depends on the research and development category. Overhead costs are reimbursed to a level of 30 % of the total approved costs (flat rate).

The ECSEL JTI (Electronic Components and Systems for European Leadership) is an integral part of the Horizon 2020 (2014–2020) framework programme and is carried out by a Brussels-based joint undertaking bearing the ECSEL name. The ECSEL joint undertaking was established according to the applicable Council regulation. Its members include the EU, represented by the European Commission, and the Member States which have joined the undertaking. It supports research, development and innovation of embedded computing systems, microelectronics and intelligent systems through annual calls for project proposals.

7.12.6 Antarctic Cooperation

Argentina

The Czech implementation bodies of the relevant Agreement are the Ministry of Foreign Affairs and the Ministry of Education, Youth and Sports. On the Argentinian side, this role is filled by the National Antarctic Directorate of the Ministry of Foreign Affairs, International Trade and Worship. The Agreement provides legal framework for both parties to develop cooperation on the Antarctic territory in the areas of science, technology, logistics and environment protection. The Agreement enables exchange of scientific and technical personnel, participation in joint science programmes, joint use of scientific facilities and research laboratories, and the exchange of scientific information.

Chile

The implementation bodies for the Agreement are the Ministry of Education, Youth and Sports on the Czech side, and the Ministry of Foreign Affairs, working through the Chilean Antarctic Institute, on the Chilean side.

Under the Agreement, the parties pledged to cooperate in the following main areas: preparation of joint scientific and technical projects, exchange of information in areas of common interest, support of education and professional human resource training, and improvement of transport in Antarctic areas.

The parties envisage that the cooperation will develop on the basis of the Agreement primarily in areas such as physics of the atmosphere, cosmic rays, meteorology, geology, geophysics, palaeontology, oceanic and terrestrial ecology, glaciology, biology and medical science, with a focus on uncovering changes of global importance which can be observed in Antarctica, and observation and monitoring of such changes.
